CALIFORNIA FARMER AND JOURNAL OF USEFUL SCIENCES.

VOLUME XXXIII. SAN FRANCISCO, CALIFORNIA: THURSDAY EVENING, JANUARY, 20, 1870. NUMBER 1.

The California Farmer AND Journal of Useful Sciences.

PUBLISHED EVERY THURSDAY EVENING BY WARREN & CO.

OFFICE—*No 320 Clay street (up stairs), below Battery* SAN FRANCISCO.

TERMS OF SUBSCRIPTION.

By mail, for one year, $5; for six months, $3. For a Club of five new subscribers, a sixth copy will be sent gratis. When payments are delayed six months $1 additional per year will be charged, and $1 each year also for every year delayed.

City subscribers, delivered by carrier, 12½ cents number or $6 a year in advance.

☞ Advertisements and Subscriptions must be paid for in advance. Payments in Gold or Silver.

☞ All letters on business connected with the office should be addressed to WARREN & Co. PUBLISHERS. San Francisco, Cal.

LIST OF AGENTS:

Our Subscribers can send money BY MAIL safely. Register at the Post-office, and the money will come direct and sure.]

WELLS, FARGO & Co., *at all their Offices in this State.*

POSTMASTERS, *throughout the State are requested to act for us*

WHITE & BAUER, *Washington street*, San Francisco.

NEW ENGLAND HISTORIC GENEOLOGICAL SOCIETY.

This is one of the most important Associations of New England, for it is established as its name purports, to collect and transmit to posterity the "Genealogical Tree" of New England, the Birth place of American Freedom.

We feel sure every American citizen will feel an interest in this Society, and every Son and Daughter of New Englandwill feel a thrill of joy and gladness, as they read the eloquent words in the admirable and glowing tribute paid to the soil and people of New England, and as we speak thus we might say every American can claim relationship with the soil where the first martyr blood was spilt, and where the WAR CRY OF FREEDOM first echoed over the Hills and Vallies in and around Bunker Hill, Lexington, and Concord, and as a son of New England, who has often wandered over all these spots of HOLY GROUND, we hope every heart feels the same love of their memories.

We wish the "SONS OF NEW ENGLAND," here in California would bear in mind the 18th of March, we think it would be a happy thing for them here in California to make that day memorable, in common with the parent Society at Boston—can it not be done? Can we not meet together and then communicate with the Parent Society?

We give the following as a portion of the doings of the Annual Meeting held in Boston, January 5th, which we copy from the well known and highly popular paper, the *Boston Mercantile Journal*

ANNUAL MEETING.

The Annual Meeting of the above named Society was held at their Rooms in Bromfield Street, yesterday afternoon, the President, Hon. Marshall P. Wilder, in the chair. The records of the last meeting were read and approved, after which new members were elected.

The Librarian, Mr. William J. Foley, submitted his annual report, by which it appears that the number of bound volumes presented to the Society during the year was 317; the number of volumes on hand at the commencement of the year was 8007, making the total number on hand 8324. The number of pamphlets on hand January 9th, 1869, was 24,005; since that time 1170 had been received, making a total of 26,075. The Society had come into possession of several files of newspapers, the gift of Mr. Thomas Watermac. Six valuable photographs, and medallions in bronze of General Washington and Governor Andrew, were presented by Mr. J. Otis Wetherbee and W. A. Brigham.

The corresponding Secretary, Rev. Edmund F. Slafter, reported that during the past year he had received letters of acceptance from one hundred and two resident members, five corresponding members and one honorary member.

Rev. Dorus Clark, the Historiographer, read two interesting biographical sketches of the lives of the late Mr. Nathaniel Coffin of Dorchester, and Hon. Johnson Gardner, M D., of Pawtucket, R. I., and reported that the whole number of members of the Society whose decease had come to his knowledge within the year 1869, was 28; of these four died in the year 1868, and memoirs of eighteen of that number had been read to the Society.

Mr. William R. Deane, from the Committee on Papers and Essays, gave an account of the different papers which had been read during the past year.

The report of the Publishing Committee was read by the Secretary. It related to the number of documents, reports, etc., which had been published during the past year, and suggestions were advanced in relation to the *New England Historic Register*, which had been self-sustaining heretofore but it was deemed advisable to enlarge it, and also to increase its circulation. Members of the Society were urged to become subscribers, and it was further stated that it had been in existence for twenty-four years.

Wm. B. Towne, the Treasurer, reported that the receipts of the contingent fund, which embraced the admission fees and annual assessments of members, including a small balance brought from last year's account, amounted to the sum of $1353,77; that the ordinary expenses of the Society had been $1271 48, leaving a balance in the Treasury from this source of $8229; that the funds during the same period had been increased $902 44 principally by sums received for life membership and the income of investments belonging to permanent funds, and that the cash assets of the Society now amounted to $7023 04.

Col. Wilder, on behalf of the committee appointed to make arrangements for celebrating the twenty-fifth anniversary of the Society, which occurs on the 18th of March next, reported that the subject had been duly considered by the Board, and it had been decided that an address should be delivered on the occasion. "On the History and Future work of the Society," and the following committee was appointed to make the necessary arrangements: Hon. Marshall P. Wilder of Boston, Dr. Winslow Lewis of Boston, Hon. Geo. B. Upton of Boston, Hon. Charles H. Bell of Exter, N. H., Wm. B. Towne of Boston, Hon. E E. Browne of Portland, Charles W. Tuttle of Boston, and Chas. I. Howard of Hartford, Ct.

An invitation had been extended and accepted by Rev. Edmund F. Slafter to deliver the address on the occasion.

The committee on nomination of officers for the ensuing year reported a list, with Hon. Marshall P. Wilder as President, the remainder of the list being substantially the same as last year, which was adopted together with the above named reports.

ADDRESS BY HON. MARSHALL P. WILDER.

Gentlemen of the Society: I tender you my heartfelt thanks for this renewed expression of your esteem. I would gladly be relieved from further duty, but I feel bound by a sense of gratitude, as well as of obligation, to conform to your wishes, and will therefore accept the honor conferred.—While I make these acknowlegements, I frankly confess that I accept of this appointment for the special object of carrying out the intention of this Society, to secure for itself a building, with suitable accomodations, and in some measure commensurate with the importance of its objects and designs. The Committee charged with the duty of reporting on a suitable location, and of raising funds for the accomplishment of the same, have had the subject continually in mind, and in their behalf I beg to report that we have confident hopes that both may be realized the present year.

Before entering on any extended remarks, I desire to call your attention to the excellent arrangement and condition of the library, under the efficient care of our diligent Librarian. By the reports which have just been submitted, it appears that we now have eight thousand three hundred books, and twenty-six thousand pamphlets, many of which are of the most valuable character.—These are increasing rapidly, and even at the present time constitute a library in the Historical Genealogical department unsurpassed by any other in our country. To preserve these, to provide room for further acquisitions, and for the accommodation or our large and constantly increasing number of members, is the imperative duty of the Society. Our attention has so often been called to this subject, that it may seem superfluous to allude to it again. But the time has come when, in my judgement, no further delay can be sanctioned.—The time has arrived when absolute necessity, public sentiment and personal obligations demand that this work be done, and that it be done quickly. My own observations, gentlemen, during the past year, as well as the reports which have been made to-day suggest the great obligation we are under to the directors, and other officers, for the sound judgment and watchful care with which they have administered the affairs of the Society, and especially its financial department. The policy of limiting our expenditures, whatever may be our wants, strictly and firmly to our current income, cannot be too highly commended. This I believe to be sound, both in principle and practice, and I trust we shall never depart from it at any future period. I desire also to express our grateful acknowledgments to the editor of the *New England Historical and Genealogical Register*, and his able corps of assistants, and to the contributors to that invaluable magazine. And here, I would also state, that all the labor connected with this publication, both editorial and financial, is done without any pecuniary emolument; and when I assure you that three thousand dollars a year would be an inadequate remuneration for the gratuitous service which a few members of the Society are giving to this work, you will agree with me in the high appreciation of their praiseworthy labor.—These gentlemen are making this sacrifice, for the simple purposes of embalming, for all time, historical matter which has never before been in print and which, if not rescued, must soon perish under the corroding tooth of time. I am sure, therefore, you will not think I am asking too much in requesting all of my fellow associates to aid these gentlemen by becoming subscribers, if you are not already such to this exceedingly valuable and important work. It is the organ of this Society, and will bring to your firesides, four times in the year the monthly proceedings of the Society, and historical information relating to New England, which can be obtained from no other source. Let every member of this Society, then, become responsible for a copy, either for himself or for some public library, where this magazine ought to be, and thus render essential aid to this important department at a small personal sacrifice on his own behalf.

Gentlemen, the world moves on, and we must move with it. Perpetual change, perpetual improvement, is the battle cry of our age, and he who is not ready to move forward with it will surely be left by the wayside. Our age is alike distinguished for its remarkable activity, its startling enterprise its notable achievements. In all that pertains to intelligence in art, science and literature—in everything which pertains to the comfort, happiness and culture of the human family, the present is infinitely superior to any or all that have proceeded it. Never before have we enjoyed such privileges for the acquisition and diffusion of knowledge. We seem to have come forth from the relative obscurity of the darker ages and to have arisen with the dawn of a brighter day. We begin to see where we are, to comprehend what we are doing, and to anticipate to some measure the destiny which awaits this grand triumphant march of Christian civilization. Could those who have gone before us have seen what our eyes have been permitted to behold; could they have traced, as we now do, this onward advance to the benign influences of their early examples; could they have witnessed, as we have done, these remarkable results, this advancement to higher and higher degrees of excellence, how would their hearts have rejoiced in view of this continual approach toward the utmost boundary of human attainment!

Much has been said of late in regard to the decline of the industrial, commercial and other great interests of New England—that her political position in the community of States must hereafter be of a secondary character. We are not among those who are willing to believe in this decadence of her prosperity or of the influence of her institutions. We believe in the blessings which flow from well directed industry, the supremacy of the laws, and the benign results of civilization, virtue and truth. New England men are too often charged with extolling her importance and merit; but while we would acknowledge the rising greatness of our Western and other States, empires though they may be, still we would be just to ourselves in sustaining her honor, and perpetuating the virtues of her sons. How has she encouraged and fostered every effort for the spread of the gospel—for the diffusion of knowledge—for the extension of human freedom—for the support of constitutional authority—for the progress of internal improvements and the development of national resources! How has she sent her sons as pioneers to colonize by her enterprise, to utilize by her industry, to enrich by her wealth, and to build up by her example new States for the diffusion of the piety, patriotism and principles of her fathers—and so, in the future as in the past, wherever their feet shall be planted, however dense the forrest, however distant the shore, there her churches, school houses and benevolent institutions shall rise, the blessed harbingers of future good! But whatever rank may be assigned by Providence, to New England in the future in the calendar of States, her name will forever be cherrished by grateful millions for the good she has already done. The lustre of her renown can never be tarnished. The light of her example can never be darkened. In the language of her great expounder, "THE PAST IS AT LAST SECURE!"

Whenever I reflect on what New England has done for the world, what she has done for the cause of education, religion, civil polity, and for the amelioration of the ills that flesh is heir to, the blood courses more freely in my veins, and my heart rises in gratitude to the Giver of all good, that he permitted me here to be born—here to live. Here let me die!

Trace for a moment some of the incidents of her history. Look at New England, presenting examples of genius, enterprise and benevolence unsurpassed in the annals of the world!

Who was it that drew the lightning from the fiery cloud and held it in his hand!

Who was it that laid the mystic wire dryshod, from continent to continent, in the almost fathomless abyss of the mighty deep!

Who was it that taught the electric spark, with tongue of fire and quick as thought, to speak all the languages of the globe!

Who was it that brought the heaven-born messenger, Lethean sleep, to assuge all human suffering, and to blot from the memory the cruel operations of the surgeon's knife!

Who planted the first free school on this continent, if not the first free school in the world—the free school, that tree of knowledge, whose fruits are freedom of thought, freedom of speech, freedom of worship—that tree whose leaves are, literally for the healing of nations!

Whose sign manual appears at the head of the signers of that immortal Declaration of American Independence—who were they that fell where yonder column rises—and who were the volunteers that rushed first to the defence of the Capital in the late fearful crisis!

Who were the men who conceived the idea and laid the plan for the greatest missionary enterprise on our Western shores, going forth with the ensign of the Cross in one hand and the flag of our nation in the other, to the distant islands of the sea!

Who were the men on this hemisphere that first stood forth as the almoners of human freedom and equal rights, boldly declaring, with their lives in their hands, like Paul on Mars Hill, that "God made of one blood all the nations of the earth!"

By whose bold adventure, untiring energy and wonderful dispatch was our western continent spanned by the iron tracks of the Pacific road!

And who is he that has been so lately honored with princely burial at Westminister Abby among soverigns and illustrious men, and whose remains, by order of her Majesty the Queen of Great Britain, are now under royal convoy to his native land, in testimonial of his noble benefactions to mankind! Were not these New England men? Were not these—all these beneficent acts and achievements—the result of New England mind, New England culture, New England genius?

It is our duty to treasure up these events and incidents, and to transmit them to future generations. It is these which have elevated our institutions as shining lights, whose beneficent rays have penetrated the darkest recesses of the earth and whose golden record shall gleam with brighter and brighter effulgence on the historic page.

But while we rejoice in this record, we cannot but deplore the loss of much valuable history in the past. How much is being lost every day.

"And like a snow-flake on the river,
A moment white, then gone forever."

How many men of worth in the ranks of merchants, artisans, and the various departments of industrial and professional life have passed from the stage of action, to whom the city of Boston is indebted for the eminence and prosperity to which she has attained, and of whom, so far as history is concerned, no record on its page has ever been made! It is the purpose of our Society not only to preserve the history of the illustrous men and deeds of New England, but to make a record of the lives and services of all her sons who have in their vocation been instrumental in promoting the welfare of mankind.

History is the great source from which we derive instruction and reproof. History erects her beacon lights to warn the mariner of the rocks and quicksands that endanger his voyage—history floats on the river of life seeds of noble deeds and virtuous example, which shall germinate on its banks, producing glorious harvests down the long line of its shores to the ocean of eternity. And how grateful the reflection that the principles which have made us what we are, must ever control the destiny and happiness, not only of our own republic, but of all free republics. Let us then treasure up these precious memorials of our fathers, that the virtues of the great and good may be wielded for the benefit of our children and our children's children—and thus let us hold up the mirror to each succeeding age, through all recorded time

Lives of great men all remind us,
We can make our lives sublime,
And, departing, leave behind us
Footprints on the sands of time."

Let therefore no particle of valuable history be lost. The grains of sand make the mountain.—The incidents of history pile up those mighty pyramids of thought and example from whence the historian, with telescopic eye, circles not only round the broad horizon of the present, but stretches with far reaching glances back over the misty landscape of the past.

"Sees the world as one vast plain,
And one boundless reach of sky."

We honor the Brave, the Good and True,
We yield due Honor where Honor is due.

RAIL ROAD PROGRESSION.

The year of 1869 has been the great Epoch in Rail Road History, and the completion of the great Pacific Rail Road has been *the* remarkable feature of it, changing by its influence all the various markets, and the routines and plans of business men throughout the length and breadth of our country.

These changes are now having their affect, and are being felt in every section of the country, and in none more sensibly than in our own State.

It is difficult, says the *American Rail Road Journal*, with all our accumulated facilities to reach every part of our vast country, and ascertain the exact condition of the Rail Road interest in each State or section. And during the last year the development of this great interest of the nation has been so immense and so rapid, as to make it impossible to keep pace with its growth. The construction of the Pacific Rail Roads, indeed has forced all parts of the country to Rail Road extension, and hence we find that the extent of mileage constructed, and improvement on old lines has been greater in 1869 than in any former year of our Rail Road history When we state that there has been brought into use during the year no less than 6,588.37 miles of new road, this fact is fully proven. This is more than one eighth part of the total mileage in the country, the other seven-eighths having taken 40 years of varied fortune to establish. Yet still we are progressing, and the year now commencing, promises to eclipse even the year just closed. We have now in use an estimated milege of 48,860.55 miles, and also projected and in progress a mileage of 27,505 83 miles.—Take all the world without the United States, and this is not equaled.

Truly we are progressive, and we see in all this development a destiny as grand as is insured. With our Rail Roads we scale mountains and span the uninhabited plains, which are still in possession of the Indians, and open up vast territories for human habitations, which without Rail Roads must forever have been closed against civilization. If we are going fast, we are going in the right direction, and the day is not far off which will give us the great benefits we seek in our headlong course. The Rail Road will unite us, and make us the great nation of the world, free and indissoluble.

FROM OUR EXCHANGES.

AHEAD OF ALL.—A. Doty, of Carpenteria, has left at our office about two dozen ears of the yellow dent corn, which is far ahead of any corn we have seen in California, and quite equal to the same variety raised in the Mississippi Valley. An idea may be given of its size when we say that one ear measures 10 inches in length and 9 in circumference; while four of the largest ears weigh 5lbs and 13 oz. One ear weighs one pound and five ounces. Would one believe, that in such a country as this pork is worth two bits a pound? The corn is worth 75 cents a hundred and a drug in the market at that. We have plenty of the golden *corn* and but little of the golden Coin, by this process.—*Santa Barbarra Press.*

WELL DO.—Mr H. Lilly, three miles west of Santa Barbara, has raised the finest sweet potatoes we ever saw. Three of them weigh *nineteen pounds*, and one weighs *eight pounds!* and are perfect potatoes, sound, finely shaped, mealy, good flavored and rich. It may be that larger and better sweet potatoes grow in California, but we have not heard of them. We invite our friends to come in and see these beauties, for a few days. We shall only have two left after Christmas.—*Ibid.*

MORE TIN.—From San Bernadino comes a report of the discovery of a new tin mine, by J. J. Atkinson, at Swartout Canon, Little Rock Creek some forty miles north of San Bernardino. Ore sent to Dr. Gelcich for assay, he reports as containing some thirty per cent, tin. If this be correct, the ore will rival or surpass in richness that from the San Jacinto mine. The ledge is well defined, and the discoverers are jubilant over their prospects.

WORK, OR GO HUNGRY.—The *Stockton Republican*, thus speaks of those who *loaf* round our streets as *idlers*, we endorse every word. *Idleness* is the source of *crime*.

No healthy man in this great and generous land need be idle; no true man *will* be idle; no man who has the ability to work has the *right* to be idle. The man who chooses to live a drone in such a country as this, deserves to die a pauper. When it shall be clearly understood that strong, healthy men must work or starve, there will be fewer idle people and less need for benevolent societies in the country.

The Sacramento *Bee* thinks that the new Legislative halls are *not* acoustically a failure. It argues that the trouble is in the *members* who unused to public speaking, don't pitch their voices in the right *key*.

If the Sacramento *Bee* don't mind *where* it flies, it may find itself under *Lock and Key*.

Agriculture.

"WHAT I KNOW OF FARMING."

I purpose, should my life and health be spared, to write a series of essays, to be entitled as above and printed in each issue of the *Weekly Tribune* throughout the year 1870 They will also appear in the *daily* and in the *semi Weekly Tribune*. They will not be long, since I propose to state only what I know or on good evidence believe; and they will not aspire to teach able, experienced, successful farmers, nor to present very much that will not, to men of this class be already generally known. They will be more especially addressed to our American Youth, whether they live on farms or not, and will aim to make them acquainted with truths and principles that ought to interest all who eat as well as those who also produce. I think I have learned some things, in the course of fifty years' labor, travel, and observation, that even good farmers may respectfully consider; but, whether any of these shall see fit to do so or not, I hope to attract and reward the attention of the young. For Agriculture in the future is certain to be very different from what it has been in the past and this I mean to demonstrate so that those who hear me through shall not be able to doubt it.

So much has been said—mainly by those who never saw my farm and know nothing of its products—of the enormous cost at which I grow each turnip, potato, etc , that I shall be impelled to use the facts presented by my own experience in illustration of the broader, more important truths that I hope to commend to wide acceptance I shall speak as freely of my mistakes as of my successes, and endeavor to make the former at least as useful to my readers as they have been costly to myself. But failures and triumphs alike will be exposed and discussed only so far as they can be made instructive to those who have yet to begin where I did; and I trust both together will not absorb a tenth of the space devoted to "What I know of Farming," wherein I hope to embody words of cheer as well as hints for guidance to the future farmers of our country.

HORACE GREELEY.

New York, Christmas, 1869.

ESSAY NUMBER ONE.

WILL FARMING PAY?

I commence my essays with this question, because, when I urge the superior advantages of a rural life, I am often met by the objection that *Farming don't pay*. That, if true, is a serious matter. Let us consider:

I do not understand it to be urged that the farmer who owns a large, fertile estate, well-fenced, well-stocked, with good store of effective implements, cannot live and thrive by farming. What is meant is, that he who has little but two brown hands to depend upon cannot make money, or can make very little by farming.

I think those who urge this point have a very inadequate conception of the difficulty encountered by every poor young man in securing a good start in life, no matter in what pursuit. I came to New York when not quite of age, with a good constitution, a fair common-school education, good health, good habits, and a pretty fair trade—(that of printer). I think my outfit for a campaign against adverse fortune was decidedly better than the average; yet ten long years elapsed before it was settled that I could remain here and make any decided headway. Meantime, I drank no liquors, used no tobacco, attended no balls or other expensive entertainments, worked hard and long whenever I could find work to do, lost less than a month altogether by sickness, and did very little in the way of helping others. I judge hat quite as many did worse than I as did better; and that of the young lawyers and doctors who try to establish themselves in their professions, quite as many earn less as earn more than their bare board during the first ten years of their struggle.

John Jacob Astor, near the close of a long, diligent, prosperous career, wherein he amassed a large fortune, is said to have remarked that, if he were to begin life again, and had to choose between making his first thousand dollars with nothing to start, on or with that thousand making all that he had actually accumulated, he would deem the latter the easier task. Depend on it, young men, it is and must be hard work to earn honestly your first thousand dollars. The burglar, the forger, the blackleg, (whether he play with cards, with dice, or with stocks), may seem to have a quick and easy way of making a thousand dollars; but whoever makes that sum honestly, with nothing but his own capacities and energies as capital, does a very good five-years' work, and may deem himself fortunate if he finishes it so soon.

I *have* known men do better, even at farming. I recollect one who, with no capital but a good wife and four or five hundred dollars, bought (near Boston), a farm of two hundred mainly rough acres for $2,500, and paid for it out of its products within the next five years, during which he had nearly doubled its value. I lost sight of him then; but I have not a doubt, if he lived fifteen years longer and had no very bad luck, he was worth, as the net result of twenty years' effort, at least $100,000. But this man would rise at 4 o'clock of a Winter morning, harness his span of horses and hitch them to his large market-wagon (loaded over night), drive ten miles into Boston, unload and load back again, be home at fair breakfastime, and hastily swallowing his meal, be fresh as a daisy for his day's work, in which he would lead his hired men, keeping them clear of the least danger of falling asleep. Such men are rare, but they still exist, proving scarcely anything impossible to an indomitable will. I would not advise any to work unmercifully; I seek only to enforce the truth that great achievements are within the reach of whoever will pay their price.

An energetic farmer bought, some twenty-five years ago, a large grazing farm in Northern Vermont, consisting of some 150 acres, and costing him about $3,000. He had a small stock of cattle, which was all his land would carry; but he resolved to increase that stock by at least ten per cent., per annum, and to so improve his land, by cultivation, fertilising, clover, etc., that it would amply carry that increase. Fifteen years later, he sold out farm and stock for $45,000, and migrated to the West. I did not understand that he was a specially hard worker, but only a good manager, who kept his eyes wide open, let nothing go to waste, and steadily devoted his energies and means to the improvement of his stock and his farm.

Walking one day over the farm of the late Prof. Mapes, he showed me a field of rather less than ten acres, and said, "I bought that field for $2,400 a year ago last September. There was then a light crop of corn on it, which the seller reserved and took away. I underdrained the field that Fall, plowed and sub soiled it, fertilized it liberally, and planted it with cabbage; and, when these matured, I sold them for enough to pay for land, labor, and fertilizers altogether." The field was now worth far more than when he bought it, and he had cleared it within fifteen months from the date of its purchase. I consider that a good operation. Another year, the crop might have been poor, or might have sold much lower, so as hardly to pay for the labor; but there are risks in other pursuits as well as in farming.

A fruit-farmer on the Hudson above Newburg, showed me, three years since, a field of eight or ten acres which he had nicely set with grapes, in rows ten feet apart, with beds of strawberries between the rows, from which he assured me that his sales exceeded $700 per annum I presume his outlay for labor, including picking, was less than $300 per annum, but it cost something to make this field what it then was. Say that he had spent $1,000 per acre in under-draining, enriching and tilling this field, to bring it to this condition, including the cost of his plants, and there must have been a clear profit here of at least $300 per acre.

I might multiply illustrations; but let the foregoing suffice I readily admit that shiftless farming don't pay—that poor crops don't pay—that it is hard work to make money by farming without some capital—that frost, or hail, or drought, or floods, or insects, may blast the farmer's hopes, after he has done his best to deserve and achieve success; but I insist that, as a general proposition, Good *Farming* DOES *pay*—that few pursuits afford as good a prospect, as full an assurance, of reward for intelligent, energetic, persistent effort, as this does.

THE DECLINE OF FRUITS.

One of the great difficulties we have to encounter, is the deterioration of varieties. However we may theorize in regard to this matter, it must be admitted, from the practical point of view, that some fruits have so declined, as to render it absolutely necessary, to replace them with new varieties. And what has been true in the past, will be so in the future. Witness certain kinds of pears in our own day—the St. Germain, Crassane, Brown Beurre, White Doyenne and others—once so excellent; where are they now? Some of them are occasionally to be seen on the virgin soils of the West and South; yet for the great majority of locations, they will continue to be worthless.

Within less than a generation the pears alluded to, flourished throughout western New York, as well as in their early history, on the propitious soil of France. And even among the more modern pears we notice—as for instance, in the Beurre Diel and Flemish Beauty—signs of the same decay. And so with the grape. Where the Catawba and Isabella grapes once succeeded perfectly, they seem now to be failing, and in many sections of our country, are no more to be relied on. Even the Concord, now so popular, indicates that in time, it may follow in the same degenerate strain. While we indulge in these forebodings, we cannot but express the deep regret we feel for the loss of such fine fruits. Other fine fruits are following in the course. This should not discourage us, but rather increase our enterprise, for the production of new sorts to counteract the deterioration, which seems incident to cultivation.

Already we have ascertained that some kinds, flourish throughout a wide range of territory.—For instance, the red Astrachan apple and Bartlett pear, seem to prosper everywhere. Who can estimate the importance and value of a new variety of fruit, which shall be adapted to the wide range, of our rapidly extending cultivation? He who shall originate a new apple, pear or grape, which shall be worthy of being handed down to posterity; should be held in remembrance as a benefactor of mankind. He who shall discover a remedy for the pear blight, and other diseases incident to vegetation, which now affect our trees, or an easy method for the destruction of the hords of insects, so alarmingly injurious to our fruit crops; shall have his name transmitted to future time, as second only to those who discover methods, for the alleviation and cure of diseases, which affect the human system.

MARSHALL P. WILDER.

An Ohio correspondent of the *Country Gentleman*, recommends hill culture for sweet potatoes on hilly soils, instead of cultivation in ridges, and says that a half shovelful of coal ashes to the hill is beneficial.

Home Correspondence.

CARPENTERIA, SANTA BARBARA CO., CAL., January 3d, 1870.

ED. CAL. FARMER:

The great question here at the present time is: Will it rain?

There were several very small showers early in the Fall, which was just about enough to lay the dust, but now it is dry and dusty as July.

New Years Day was clear, not a cloud to be seen. Now and then a day that a few small clouds can be seen, which we hope are indications of rain, but at evening the stars are out bright and shining again, so our hopes vanish day after day.

There were some rather hard frosts here from the 20th to 23d December; an old resident said, "It was the coldest for 17 years."

If there is not rain enough to make a crop this year in the lower counties, it will be disastrous indeed, and doubly so to the late immigration which has been very heavy, and still they keep coming.

Crops were very good the past year; Corn, Beans, and Barley in abundance, much more than was ever raised here in one year before.

Beans were said not to yield as heavily as usual, but as there were many more acres planted, there were many more beans raised.

This county improved much the past year, and with a favorable season will improve much more this year,

There is but little fruit raised in this vicinity as yet, and little is known what *can* be done in fruit culture here.

The little fruit grown the past year was said not to be as good as usual.

Our fruit comes mostly from San Francisco, but by the time it reaches here, the freight, commissions, etc., makes it taste rather strong of *money*, so that *poor* folks cannot afford much of it.

When I was at San Francisco in November, I went over the Bay to Fruit Vale, and there I saw *tons* of apples and pears rotting on the ground, and there appeared to be no use for them whatever, even so near a great market.

California sends to New York and Boston for Canned Fruits, Preserves, Vinegar, etc. Why not save our own fruit by canning and preserving, and make our own vinegar also?

I think the reason is, because somebody has not learned to *work* for what they *can* get—they must have *big* wages or *nothing*—so we send away for what can be produced much cheaper and better at home. Such things cannot always last, we *must* and *will* learn economy, and in future we shall save much that is now lost—men must work for what we can get—small pay is better than nothing. Such prodigality as is seen everywhere is not known except in California. No where else would so much fruit be allowed to go to waste.

The Farmers of California need John Chinaman and many other *Johns* so help them save what they can raise.

O. N. CADWELL.

Those who think our cultivated lands must grow poor as they grow old, will find food for reflection in the fact that not many years back the average yield of wheat per acre in England was about ten bushels—it is now over 30 bushels.—*Brains* accomplished it.

Horticulture.

A TRIP TO CLOS-VOUGEOT.

From the French of L. Maurial.

I had an invitation from the Hon. Director of the Company of Choice Wines of Burgundy, Mr. Forest, to visit the celebrated Clos.

Setting out from Beaune the banquet with Mr. H. Macés the distinguished vintner af the Hérault, and M. L. Barral, we met as travelers by the same car with Baron Thénard, who was on his way to his estate of Talmay near Gray, about forty kilomètres from Dijon.

On our arrival at the Vougeot Station, Mr. Thénard could not make up his mind to leave us to prosecute our pilgrimage without him. He postponed his journey to Talmay, and came with us. We then supposed that visions of a trout then swimming peaceably in the shining waters of the Vouge, and the promise of Mr. Forest not to uncork anything more vulgar than Chambertin, Clos-Vougeot, Musigny and Romané-Conté, alone had the power thus to decoy the amiable savant. It will appear hereafter what marvelous projects the celebrated Chemist was revolving in his mind.

At a distance of about fifty yards from the station we stood still of our own accord, and a sigh of regret cast a passing shade over the pleasures of our excursion. It was on this spot that Roux, the celebrated vintner, was killed by a stroke of lightning. The image of this indefatigable man who, with unbounded devotion, and the most enlightened zeal, had achieved distinction in keeping intact and ever bright the fame of the vineyard of the monks of Cîteaux, rose before the minds of his friends. His praise was in every mouth; regret for him and especially for the vintners of Burgundy, for, had he lived, a few days more would have seen him a member of the Legion of Honor, a distinction richly merited by so honorable a fraternity as the vine-growers of Burgundy.

At Clos the lordly gate, the walls austere without being sombre, inspire a profound respect and almost lead the traveler to incline his head. I have seen all the great estates of France, have frequently traversed the magnificent land of Médoc, have visited the splendid mansions which dot the country at intervals of a hundred yards, have selected with admiration these historic abbeys; but never have I experienced that sentiment of reverence which overcame me in face of this imposing structure, almost in ruins without having been entirely completed.

To make use of the pithy phrase of the day, I know having been *knuckled down* by a splendor so unobtrusive and yet so majestic. In the act of crossing the threshold, my hand involuntarily rose to my hat; I bowed before this vinicultural grandeur, and I think the word escaped my lips: "Illustrious temple of the vine, thy votary salutes thee." Baron Thénard smiled gently. God forbid that my admiration, as sincere as it was ingenious, should cost him more than 100,000 francs

In the interior, dilapidation is kept within bounds; there is no danger in passing from place to place. Unfortunately I am not an antiquary, and Vougeot must be read by Mr. A. Luchet; I cannot say what is the style of this vast edifice, blackened with dust and smoke, but there is no doubt that objects of great interest might be laid bare by means of brush and broom. The cellars are in perfect order. In tuns of twenty to twenty-four casks are stored by turns from year to year these famous wines of Clos, all of which we tasted; what with the good and the better, there is a splendid fortune in the cellar.

The arrangement of the bottles is a master piece in the art of balcuting. Imagine a pile of bottles two metres in hight and surrounded by a pyramid two or three miters higher, altogether rising some five feet above the ground; the matter appears easy enough when these bottles are upheld by laths; but here they stand end on end, the neck of the one protruding into the bottom of the other. Glass rests upon glass. Nothing comes between them. And yet the contents are worth from seven to eight francs a bottle. There is not an instance of an accident on record. It is Mr. Biet, the pupil and successor of Mr. Roux, who keeps alive the good traditions of the Abbey.

Ensconsing ourselves at the leading inn of Vougeot, we sat down to our repast. Mr Thénard has preserved all his Burgundian good humor; he is the same capital talker as ever. A gigantic trout is set before us; eght good appetites are mated, and a remnant is left. Cutlets like those of other countries, potatoes equalled by no other country under the sun (greatly to be commended of Messrs Bignon, Delhomme, and Ballanger, those princes of the fork of Paris.) Vougeot has everything that is good. The Chambertin sports its glittering rubies; the wine of the Clos follows suit with wonderful aptitude; the Romanée-Conti closes the amiable trio, and Baron Thenard discourses about anything and everything.

The time for parting having arrived, Mr. Forest returns to Beaune, Mr. L. Barral alone goes to call on Mr. Viennot; I am prevented from keeping him company. Mr. Mares returns to the delightful chateau of Vignolle which I have just quitted, and where he will meet Mr. Verquette, the eminent vintner who yields to none in the art of preserving his wines, who has Pommard of the vintage of 1854, such as is to be found nowhere else. Mr. Thenard demurely sets out for Talmay and I take the cars for Paris.

Forty-eight hours later the sale is opened at the Abbey, at a minimum price of 1,500,000 francs. Among the bidders were the Marquis de la Garde and his three co-heirs. The bidding is spirited, and reaches 1,650,000 francs. The purchaser presents himself a few hours later to give directions for forwarding the casks; he names as his principal Baron Thenard, Academical diplomatist! What a power of discretion! But were there any subventions? Aye, aye, heavy subventions. Nevertheless, nine cheers for the Baron Thenard. Sixty vintners more or less will dote on him, for all his vintners dote on him. Finally, Clos-Vougeot will remain with Burgundy and with France more than ever. My most heartfelt compliments to the Baron Thenard,

IS THE SMALL FRUIT BUSINESS OVERDONE?

"Judging by the market reports of the large supplies and low prices of small fruits, in the principal cities, many are led to conclude that the business of growing small fruits is overdone in this country, and cannot be extended with profit. Let us consider the question, and see whether all classes everywhere, have an abundant supply of these delicious and wholesome products of the earth.

It is the tendency of produce to concentrate at our great marts. It will pass by small towns, where it is often needed, to the great cities, there to be distributed back to the very places it has passed by. Hence it often happens that New York, Philadelphia, Boston, and other large cities, are gorged with the produce of the country, when the villages scattered through the country where it was raised, have an inadequate supply. I have known winter apples to be shipped from Rochester to such an extent that our own citizens were unable to obtain their needed supplies.

So it is with small fruits. Those who have an inclination to engage in the cultivation of small fruits generally aim to locate near a city, thinking that the profits of the business will be in proportion to the population of the city: but they soon find that a great many others have been moved by a like consideration to do the same thing, and that in consequence the supply is greater than the demand, and the low prices which active competition compels them to accept, afford but a poor remuneration. If we inform ourselves, we shall learn that quite a proportion of the berries, purchased in cities, are re-shipped to the villages that dot our country thickly all over, and are there sold at profit to consignor and consignee, after paying express charges, etc.

Now, would it not be good policy for a moderate share of the producers to locate near these villages where land can be bought much cheaper than in the vicinity of cities, and thus save themselves at least, a part of the profits that go to two or three middlemen, express companies, etc.—There is scarcely a village of from one to eight thousand inhabitants in this State—and the same is true of other States—which has a regular and ample supply of small fruits and garden vegetables raised in its vicinity. As an illustration: most of the berries I sold in Rochester last summer, were shipped by the grocer who bought them, of a grocer in a little village of about one thousand inhabitants, fifteen miles distant, who left him a standing order to ship 200 quarts of strawberries a day, and often sent special orders for double the amount. A local producer might have received two or three cents per quart more than I did, without increasing the cost to the consumer.

An objector may say, "your argument proves, not that the production of small fruits may be profitably increased, but that the producers ought to be distributed among the consumers." Let us see how placing the producer near the consumer would increase the consumption.

In the first place, inasmuch as the cost of the land, near the villages, would be less than near cities, the cost of producing the fruits would be less, warranting a slight reduction in price of fruit, which would increase the consumption. Again, with the fruit brought daily to their very doors, many would get to using it who would never touch the stale specimens imported, and those who had used it before would use it more freely. Many families who now use berries only a few times, as a great rarity, during the season, would come to using them daily, and perhaps at every meal. I would say to those who have a desire to embark in the growing of small fruits—if not already located—settle near some pleasant, growing village on the line of a *live* railroad; begin moderately—feel your way—raise the best fruit, and as the demand increases, and if you find that your supply is getting too large, ship off a portion of each picking to some other place. If you don't make much on what you ship it will help to keep up the price at home, but place your chief reliance on the *Home market.*—*Small Fruit Recorder.*

POSTAGE ON LETTERS.

Those who address us with inquiries specially *for their own benefit,* are requested to enclose stamps to prepay answers, as this kind of business is becoming very expensive to us.

VICK'S

FLORAL GUIDE FOR 1870

The First Edition of One Hundred and Twenty Thousand Copies of Vick's Illustrated Catalogue of Seeds and Floral Guide, is published and ready to send out. It is elegantly printed on fine tinted paper, with about 200 fine wood Engravings of Flowers and Vegetables, and a beautiful Colored Plate—consisting of seven varieties of Phlox Drummondii, making a fine

BOUQUET OF PHLOXES.

It is the most beautiful, as well as the most instructive Floral Guide published, giving plain and thorough directions for the

CULTURE OF FLOWERS & VEGETABLES.

The Floral Guide is published for the benefit of my customers, to whom it is sent free without application, but will be forwarded to all who apply by mail, on TEN CENTS, which is not half the cost. Address,

A MONTHLY PAPER

SMALL FRUIT RECORDER AND COTTAGE GARDENER.

AT ONLY

50 CENTS PER YEAR.

Devoted solely to small Fruits, and Vegetable and Home's Adornment. The Editor has had a lifetime of practical experience, and now has 2 acres into Small Fruits. He takes or exchanges for every agricultural and horticultural paper printed in the United States and Canada, and extracts from such, all practical matter pertaining to these interesting subjects, that readers of this paper get the cream of all these publications. A practical story entitled "Expectations Realized." will begin in the January number, telling how a person first grew fruits for his family use, and then supplied his village market, and finally worked into a very extensive and profitable business; also the Editor's "*Rambles and Jottings over the Fruit-Farm.*" Besides correspondence from all parts of the United States and Canada from practical fruit growers and flower fanciers.

Splendid inducements offered to those getting up clubs, for particulars send stamp for our beautiful and attractive show bill and "Club Circular." Sample copies of Recorder sent with show bill. Address A. M. PURDY, Palmyra, N. Y,

The show bill is exceedingly beautiful and well worth examination.

BOUND VOLUMES FARMER

☞ Volumes of the "California Farmer" for The last EIGHT YEARS, uniformly bound, can be had at the Farmer Office at $8 per Volume.

These Eight Volumes contain more useful matter touching the practical workings of Agriculture as adapted to California Culture than any Book or Books Extant, as they comprise hundreds of Experiments, Letters and Essays upon the Culture of Cotton, Rice, Coffee and Tobacco; Grapes, Strawberries, and all other Fruits, with the Culture of Hops, Castor Beans, Flax, Hemp, &c. and the Whole series of Essay of L. Prevost on Silk Culture, from early beginning.

This set of Volumes would be a Library of itself and is valuable to the Cultivator of the Soil.

Orders sent to Farmer Office will be promptly attended to

VALUABLE PLANTS FOR SALE.

☞ Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and to so cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, to gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us. WARREN & CO.,

REASONS WHY EVERY FARMER AND STOCK-RAISER SHOULD TAKE THE "CALIFORNIA FARMER."

1st. Every Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State

2d. Every such person should give his sanction and support, generously and voluntarily to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefitted* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and the Stock-raiser will always be better advised of the markets, and that kind of information so important to his interests by constant access to a Home Journal.

6th. The *California Farmer* has faithfully advocated the best interests of the Farmer and Stock-raiser for sixteen years steadily and is the *only Agricultural Journal in California.*

7th. The *California Farmer* contains the most important information relative to these interests in every branch of Agricultural science.

8th. The *California Farmer* contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The *California Farmer* contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Agriculture.

10th. The *California Farmer* is now the *only paper* on the Pacific Coast that is continued by its *original Editor and proprietor,* commencing at the time this Journal commenced; and having been constant in its efforts for the good of these interests, deserves the cheerful patronage of all engaged in industrial pursuits, and of all good men.

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING.....JAN. 20, 1870.

THE CALIFORNIA FARMER READING ROOM, AND MUSEUM OF NATURAL HISTORY.

330 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER OFFICE are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING.

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion, twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SAMPLE COPIES.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination hoping our paper will meet their approval and induce them to subscribe, and to ask their neighbors to subscribe also.

Send for Sample Papers and get up a club. Address

PUBLISHER CALIFORNIA FARMER,

Editor's Chair,

[Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in *each issue* of our *Journal*, to which we would direct their *special* attention.]

THIS NUMBER.

We issue a very large edition of this our NUMBER ONE of Volume 33, and shall send it to many persons who at present are not subscribers, but whom we trust will favor us with their names upon our Subscription List, and give us their kind coöperation in the great cause of *Agriculture*, which must now be admitted to be the *Basis of all our Prosperity*.

☞ Sample Copies will be sent as desired.

OUR PRESENT NUMBER.

We have occupied in our Home Department, a considerable space with the cause, and interest of WOMAN, because at this time the Public Mind is greately agitated upon Womans' Rights and Womans' Suffrage.

In this Number we have given an Essay upon "Business Education for Girls," by Madam Demorest, the Publisher of the Book of Fashion, and an Essay from such a source is what we need, as the author has great and varied experience, by her intercourse with woman of all ages, all tastes, education, and conditions of life. The Essay we pronounce one of a superior order, and worthy a careful perusal by every Mother in the land, as it contains vital truth.

We also present,

Womans' Power of Eloqnence, eloquently spoken, from the *N. Y. Tribune*, and a few brief and pointed words from our correspondent Jenny Dare.

We also present the happy words of a fond Mother as addressed to her absent Daughter "LILLIE," we shall be happy to hear from "Zora," often.

FOR OUR FARMERS.

We present them with the letter of Horace Greely Esq., the vetran Editor of the *N. Y. Tribune*. Mr. Greely announces his intentions of talking about Farming—and these Essays we design to publish from the *Tribune*, as they are indeed a treasure to the Farming interest of our whole country and we believe the readers of the FARMER will truly appreciate them. We know they will reflect *Honor* upon this truly NOBLE EDITOR and FRIEND OF HUMANITY.

GEMS IN MEMORY.

How can we properly speak of those many precious souvenirs that have been kindly sent to us to cheer us on in our Editorial labor and toil for the new year, these tokens in their many forms, and these priceless values are like stars in the beautiful blue above us, they lead the nobler senses to higher thought, to goodness, purity, truth, and gratitude. And as these momentoes of kindness meet our vision, we remember each noble and generous friend, while these words in their truest meaning express our feeling of them "*Bona Pulcra et Vera.*"

LETTERS.

We have Letters from "R. D. M," from "Jenny Dare," and several Letters of Inquiry, all for our next.

We have Sketches of the New Plaza of San Jose, for our next.

Also, Important Letters on Bathing and Bath Houses, will appear.

Harriet Beecher Stowe's Vindication, in our next.

CALIFORNIA RESOURCES.

Important matters touching our resources, in our next.

WE NEVER PIED A FORM.

Whatever of Poverty or Misfortune may be in store for us for the future, we can say that for our last Sixteen Years Publication of the CALIFORNIA FARMER we have never yet "Pied a Form." This we think a *little* of good fortune, if nothing more,

OUR SEVENTEENTH YEAR.

SALUTATORY.

With grateful feeling we salute our Patrons, our Friends and our Readers, all. A few, aye, a goodly number who will open and read this issue of FARMER we salute with particularly grateful emotion, as those whose names have honored our Roll of Subscribers from the first day when we sent forth *our* little fledgling upon a then wide field of *uncultivated* territory in this "Land of Gold."

To you, Honored Patrons, we tender our grateful feelings for your constant walk with us, and your many kindly words and kindly deeds. From the barren waste we then saw before us in this vast Territory, we can now see, what even we then with earnest and hopeful imaginings saw, that vision fully realized. A State rich in her Agricultural resources, beyond that of any other state in our Union, and opening up to the world an inheritance for the Industrial Interests that has no parallel in our country's history. This will be realized.

To our many patrons and friends who have joined us, and our work in this field of labor—to you we also express our grateful thanks for all you have done to make our work as a Journalist pleasant, prosperous, and happy. For such we esteem the work which claims all our means, all our mind, affection and strength, save what is due to God, our Country and our Home.

We here repeat *Sixteen Years* in California is a long period to be devoted to any one occupation, but to such an occupation, in such a changing State as California, is indeed a life time, and so it seems to us, and such indeed it has been, for our enterprize has been our LIFE WORK. But if we have not made ourselves RICH in *this worlds goods*, we *are* rich in the consciousness that we have done some good to the State of our adoption, and that consciousness comes to us more refreshing than would all the Gold and Silver of our Hills and Mountains.

In a review of the past sixteen years labor *we* have witnessed great and wonderful changes in our City and our State, and indeed in our whole country.

The first number of the CALIFORNIA FARMER was issued in the *Old Musical Hall, Bush St*, in 1854, just at the close of the Agricultural Exhibition designed by us, the First Fair, held in this City.

A series of Lectures, *five* in number were given in Musical Hall free to the public, these were, First, by Dr. Henry Gibbons now Editor of the *Medical Journal*, subject, "the Age we live in," Second, by Rev. Wm. Speer, formerly Missionary to China, on "Chinese Agriculture," the Third by Dr. H M. Gray, (deceased) on "Our Condition and Prospects," the Fourth by Col. J. B. Crockett now Supreme Judge of our State, subject "Agriculture, its Influence and Value." The Fifth and last was by Dr. C. F. Winslow then a resident Physician, subject "The Preparation of the Earth for the Intellectual Races."

As we re-read these admirable Essays given sixteen years since at Musical Hall, the generous mental gift of these gentlemen free to our citizens, as we read their eloquent hopes and prophicies for the future of our State, we are doubly glad to know we were enabled then to plant so good seed, for the words of these men four of whom, thank Heaven still live with us, one whose memory is still embalmed in good loving, generous hearts, having been called Home above.

As we thus speak we ask, where is the Bush Street of 1854, and where is Musical Hall? the changes in that Street is but a type of our City and State, from the low and common buildings, many of them cloth lined, these have given place to stately structures that compare well with the richest Cities of the world, and as with the City, so with the Country.

At that early date Agriculture was but little esteemed, the Mining Interest absorbed nearly all the attention, all the sympathy, all the Capital of the State, but by degrees light came and soon this State began to show its wonderful capacity, and now California that in 1854 was known as an exporter of Hides and Horns merely, has become *first* in the list of Grain and Wine exporters, and soon Wool and Silk, and Sugar, with Leather and many other products will swell her now $25,000,000 exports to the grand total of $100,000,000 annually.

But why need we give figures which are become patent the world over, for California has *made her mark* on every *trade mart* of the world, and yet her great prosperity is but only begun.

We do not think any one will charge us with egotism or self praise if we do say we feel we have been with our *Journal*, the CALIFORNIA FARMER, an instrument however humbly we may labor in advancing this great and goodly cause of AGRICULTURE which lays at the very foundation of all prosperity of City, State, or Nation.

And now as we enter upon our *Seventeenth Year* of our Editorial labor, we do so with none the less zeal, interest or feeling. Every year we see more and more to do, and if our kind friends and patrons at home and abroad will but co-operate with us still, we can only promise them all there is left of us for our remaining years of life, —and while we acknowledge our grateful thanks to them, we also return our sincere thanks to all our cotemporaries that have from time to time spoken the kindly word for us and our work, to each and all we tender the best wishes of an earnest heart for their prosperity and the prosperity of every good cause in our State, Country and the World.

THE RAINS HAVE COME.

The rains have come, let every heart be glad, and every heart send up its praise, for the blessing we have had.

It will be remembered by the readers of this Journal that *we* have from the beginning of the Autumn, on planting season, continually expressed a confidence of a prosperous planting time by reason of "plenty of rain."

Every month, and sometimes each week we have given reasons for our belief, even from the first generous rains which came at early day.

We found our belief of larger quantities of rain each season from the largely extended area of cultivated lands, which always tend to produce moisture. We also believe that the increased number of Orchards, Vineyards and Gardens, the larger number of Villages, Manufactories, Workshops, Steamers, Steam Works, and increased human enterprizes of all kinds these all have a material influence upon the atmospheric air, and the moisture in the new turned soil of thousands and tens of thousands of acres which is drawn upward by solar heat when condensed above, must return more copiously on a territory where there is no cultivation, and nothing but a barren waste.

It was upon such an hypothesis we based our convictions of an abundance of rains, and *we* have not been dissapointed.

The rains have again commenced, and before this storm is over our farmers far and near will *rejoice* and be glad, for the rains which will be heavy, will be to them as their great drops and copious streams come down like sweetest music. Thus far the rains have extended widely, and by our Telegraph reports the clouds in every place far and near give good promise that the southern section of our state will be generally refreshed also, and no portion of our State need fear the want of rain this season, for we shall have an abundance of it everywhere. Let therefore every heart rejoice and be glad, giving due praise and gratitude for the rich blessings of

"THE EARLY AND THE LATTER RAIN"

RESULTS IN SILK BUSINESS.

I. N. Hoag, Esq., formerly Secretary of the State Agricultural Society, and for the last three years largely engaged in the raising of Silk Worms and Mulberry Trees, in a letter to the *Sacramento Union* makes the following report of his business for 1868:

"In 1868 I fed the leaves from three and one-half acres of land covered with two year old *morus multicaulis* trees. The trees had been grown from cuttings where they then stood. They had been cut back in the Spring or Winter close to the ground and the tops used for cuttings, so that they did not furnish much over half the early foliage they would have done had they only been pruned with an eye to that purpose. The result of that operation succisely stated, is as follows: Receipts, 486 ounces and 13½ pennyweights of eggs sold to Hentsch & Berton at $4 per ounce, $1,946 70; eggs retained for self and sold to other parties, $1,897 50; perforated cocoons sold, $75 30; total, $3,920 00. Contra, labor and other expenses, $472 00. Net profits, $3,449 00. The feeding was commenced on the first of June. On the 25th of July it was fully completed and the eggs all made. On the 7th of August I had my money from Hentsch & Berton, and could have sold the entire product to them."

The above showing is very satisfactory, and would induce many to go into the same business. *We* would, however, like to have Mr. Hoag give the result of his business for 1869, so that others may know if his success is continuous, as it is all important to this great interest that we have all the light we can have.

Will Mr. Hoag comply?

CAUSE OF SUICIDES, MURDERS, ETC.

Heriditary transmissions of physical qualities, character, capacity, etc., from parent to child, is an admitted truth among all intelligent creatures, and yet while admitting this truth, little or no regard is paid to this all important fact in the re-creation of immortal beings, while millions upon millions is expended to improve the race of all the lower orders of creation. If the good and healthy points can there be transmitted, of course the bad ones can, and this subject is awakening some attention among scientific minds.

Dr. Charles Elam, a physician of England, has just issued a book in which many medical problems are fully discussed, and on mental diseases he has given the following brief, but true elucidation of the causes of suicide now so prevalent in our midst.

"There is no form of heritage more remarkable than that of tendency to suicide without any other marks of aberration of intellect. Dr. Winslow relates the case of a family where all the members exhibited, when they arrived at a certain age, a desire to commit self-destruction; to accomplish which the greatest ingenuity and industry were manifest. Dr. Gall relates a very striking instance of seven children of one man, who all enjoyed a competency and good health, yet all possessed a rage for suicide, and all yielded to it within thirty or forty years. Some hanged, some drowned themselves, and others blew out their brains. Many other examples of the same tendency are brought forward by the same writer. I may add one case to the above from my own experience. Sitting one day with an acquaintance, I noticed some depression in his spirits. After a prolonged silence, he broke out in the following dreary attempt at conversation: "My grandfather hanged himself, my uncle took poison, my father shot himself, I shall cut my throat." The facts were correct; but constant surveillance prevented the sequal in his own history."

Now we ask, where are our Medical men. Will they not look into this subject, and give the Public light?

Palmyra Nursery, Palmyra, N. Y.

By Purdy and Johnsons, very popular growers of small fruits.

WHITHER ARE WE DRIFTING.

The Boys of to-day in San Francisco—the Boys that we meet coming from our Public Schools—are to be in all human probability the rulers of this city, and to wield to a greater or lesser degree, and to control the destiny of this great State, for as goes the city, so goes the country, our city being the centre or head of the commonwealth the life-blood must go out from this city for good or for evil. We know "God made the country, and man makes the city," and we do know, that politically speaking, our city and its influences in a great measure control the State.

Taking this view of it, we look to the Boys of the present time, as a TYPE of the future character of our men, and to see and know what they will in all human probability be, we must meet them as they pour out of the PUBLIC SCHOOLS where they are now being *trained for the future* as the *War Horse* is trained for the BATTLE FIELD, and the *Race Horse* is trained for the RACE COURSE.

"A good tree cannot bring forth evil fruit, nor can an evil tree bring forth good fruit."

"A fountain cannot give forth sweet and bitter water," nor can any Boy accustomed to the habits of profanity, low conversation, petit larceny, mischief, quarrelling, coarse conduct to the other sex, unfeeling conduct to the poor drunkard, and utter disrespect to the aged, ever become a good man or a man fit to rule or have any part in the government of any country.

This is a subject of the greatest moment now to the people of this city and to our whole State, for we are making liberal provisions for our PUBLIC SCHOOLS, COLLEGES and SEMINARIES of LEARNING, and it would be far better that a Boy should remain uneducated in books, unless the heart and morals are trained also, for an ignorant man will have less power if he is bad at heart than one that is accomplished in knowledge.

Would any one desire to know the character of the future men of our city and State? then let them pass quietly along our streets when our schools send out the Boys and Girls by thousands. There they can see them—there they can hear their words and see their conduct. There they can often see the Boy of ten years, skilled in blasphemy and lewd talk, There they can see the young smoker, and the Boy full of mischief, and rude actions. There they can see them make sport of the unfortunate—the crazy—the drunken, or the ragged beggar. There they can see them insult passers by, throw stones, break glass, or pilfer gardens, and in *miniature* do those deeds that when full-grown men, would place them in our Jails, Penitentiaries and Prisons.

And who is responsible for these things? Teachers of our PUBLIC SCHOOLS and their responsibility they think, when the pupil leaves the door of the school house, to a certain degree they do: but "as a twig is bent, the tree's inclined" and whenever the pupils of a school manifest these evil propensities and act them out in daily life, there is a grievous error at the fountain, for well conducted Public Schools, where *Teachers* are what they *should be*, the pupils will show good teaching in all their daily conduct. We live in the vicinity of one of our large Public Schools of several hundred pupils, and what we have seen and heard daily, often makes us shudder for the future of our city and for our Boys and our Girls, and all we can say or hope for is, "GOD SAVE OUR COMMONWEALTH."

"BEAUTIFY HOME."

Home should be a Picture Gallery as much as is possible within the means of its occupants. Decorated with Paintings, Engravings, Statuary, Birds, Minerals and all beautiful things in nature.

Home thus erected by those who are starting in life, would always we think remain Beautiful Homes, Happy Homes for those who have a taste to rear such Homes and keep them beautiful, would make a place, that Children created and born there would be ever lovers of Home.

We have received from E. F. Trafton Esq., Art Publisher of Chicago, "The Morning Prayer," a most exquisite Oil Chromo, designed by Louis Kurtz of the Chicago Lithographing Company, after the original by John Phillips.

This Picture should be in every Home, words cannot describe its real beauty, it must be seen to be appreciated.

This exquisite Chromo, now adorns the walls of the Executive Mansion at Washington, and President Grants Secretary in a letter to the Publisher says: This picture has been very greatly admired, and Mrs. Grant regards it as very highly creditable to the Artist, and to Chicago

We do not claim to be a great conniseur of Art, but no one who appreciates the beautiful can see this Chromo without a desire to possess it. It can be seen at our Reading Rooms, and is for sale we believe, at "Romans."

HOME MADE TYPE.

It may not be generally known that California has TYPE FOUNDRIES of a superior order, yet we have three of excellent character.

We paid a visit recently to the Complete Type Foundry of J. B. Painter, Esq., on Clay Street, and was much pleased at the perfection to which this Art is carried on in our midst.

Mr. Painter has from twenty to forty hands employed, as the business demands, and the best styles of finished Type of all sorts are here manufactured, equal to those in any part of the world. The business of Casting Type, and Electrotyping, is here carried on in all its branches, Mr. Painter having already supplied some of the largest newspapers with complete sets of type; thus another branch of trade is established to save sending our Gold abroad. Country newspapers that want a new Dress, should call on Mr. Painter.

IMMIGRATION AID SOCIETY.

It is to be hoped that our Legislators will take steps to learn the full particulars of the thousands of laborers now needing work, and wanting means to live, before they make appropriations to bring more poor laborers to our State.

Acknowledgements.

Articles Received at the California Farmer Exhibitors Rooms, No. 320 Clay Street.

BOOKS RECEIVED.

We have from the Department of Agriculture at Washington, the Bound Volume of Reports for 1868, of this we have before spoken, it is a valuable Volume, creditable to the Department, well got up, and arranged with good Illustrations.

We have also from the Department the special Reports of Statistics for November and December, 1869——valuable.

From A. Roman & Co., Publishers.

We have Qualitative and Quantitave Chemical Analysis, after the most popular Chemists, containing a correct analysis of all the material elements proper for the Agricultural Students, and what is now wanted for our Agricultural College, the Author being the Professor of Agricultural Chemistry in the Cornell University, and knowing the needs of the student he has happily supplied them.

Romance of Spanish History, by J. S. C. Abbot, handsomely illustrated. This Book by this popular author will become a popular book—the very history of Spain is full of Chivalry and Romance, and now while that nation is before the world in arms, this book will be read with interest. The well known talent and skill of the Author of this book must make it doubly interesting.

The Ancestry of Gen. Grant, by Edward Chauncy Marshall Esq., A. M., Author of "The History of the United States Naval Academy," etc. This is a Book that will be read as identified with the History of the war, and the present President of these United States.

Holy Grail, by Alfred Tennyson, D. C. L., the Poet Laureate. A new Poem by this distinguished Author, will be sought for with avidity, and will command great sale.

The above four Books are all for sale by the well known and popular Publishing House, and Book Establishment of A. Roman & Co.

We have recently received the following.

Mount Hope Nurseries, Rochester N. Y., *By* Ellwanger and Barry, the well known and extensive Nurseryman of the last thirty years, whose Nursery grounds cover hundreds of acres.

OUR EXCHANGES

By the notice we gave some time since that we could not enlarge our *list of Exchanges*, except to Journals of same interest, or those of value, we hereby give notice that those Journals that do not receive the FARMER after our *Number One*, will please understand that however much we may regret to refuse the Exchange, it arises from our utter inability to do so, for our applications for Exchange has reached the number of nearly *One Thousand*. This will show our cause of refusal. Those that receive No. 2 and 3 will remain permanent Exchanges.

OUR CIRCULAR.

With our Number One of this Volume we address letters to each of our Subscribers, and call their special attention to that Circular, and, in addition to that, we trust *each and all our Subscribers*, Farmers, Mechanics, Business Men, and all who desire the prosperity of our State, and its Industrial Interests, and our Homes, to communicate with us freely upon all subjects—our columns are open for Inquiry and Debate. All letters, however, must bear to us the *real* name of the writer to insure its publication.

We hope a generous correspondence.

THE GREAT GRAND CONCERT.

The Great and Grand Musical Jubilee proposed by Madame Camello Urso, for the benefit of the Mercantile Library Association, promises to be a Grand Success. All honor to the noble Lady who has with spontaneous generosity thus devoted her time, talent, and gifted genius, to devise a way to save so excellent an institution as our Mercantile Library from its present embarrassed condition and place it in a prosperous way, which most undoubtedly will be done, as by reports from all sections of the State, the people are *with her* in this her most laudable enterprise, and success must crown her great undertaking.

GREAT SALE OF FARMS.

We desire to call special attention to the great number of Farms and Farming Lands, Dairy and Stock Ranches, Mill Sites, and Mills, which are offered in our columns this week.

The Farm Lands and Ranches are truly valuable and worthy special attention of those who wish to establish permanent Homes, Orchards, Vineyards, &c.

These valuable lands are now liberally offered by Samuel Brannan, Esq., and should receive careful attention of all new comers to our State. See advertisement.

SEND US SAMPLES.

We desire to procure *Samples* of every variety of Grain, Grass, and every Cereal, as well as *Samples of New Products*, and for these we shall be ready to reciprocate in any way desired. We will pay for them, or bestow a full equivalent in some *new Seed or Plants* that may be desired.

NATURAL HISTORY CURIOSITIES.

We desire specimens in Natural History, Insects, Flies, Frogs, Toads, Snakes, Turtles, &c., preserved in spirits, or dried, and for these, or any curiosity, will make due return. Send by Wells Fargo & Co. to our Office.

STATE AGRICULTURAL SOCIETY.

Why is not the ANNUAL MEETING of this Society called? The meeting should be held in January and the Call should be made in season to give the members in different parts of the State opportunity to be present.

New Advertisements.

The Salem Grape.

WE entertain no doubt that the SALEM and other members of "Roger Hybrids," will succeed perfectly in California, and ship in splendid condition to the Eastern Markets.

Our stock of the SALEM, is by far the largest and best in the country and warranted genuine.

Strong plants of the SALEM, packed free, at $1,50 each, $9,00 per doz., or $35,00 per hundred.

ROGERS Nos. 4, 15, and 19, $1,00 each, $6,00 per doz and $25,00 per hundred.

MARTHA, EUMELAN, and WALTER, (new and promising varieties,) $2,00 each or $12,00 per doz.

VINES packed with great care in double boxes, Secure from frost or heat, either by Pacific Rail Road or the Isthmus route.

For further particulars, or Illustrated Circular,

Address I. H. BABCOCK & Co.
Lockport, New York.

Cranberry Plants.

ONE to 400 can be forwarded by mail at 50 cents per 100, including postage $4 per 1,000; $15 for 5,000; $25; for 10,000, or one barrel all rooted plants. 10,000 at two feet apart will plant an acre.

For mode of Culture, &c., send for Circular.

Also, for a concise Practical Treatise on the Cranberry —its History, Culture, Varieties etc.,—enclose 25 cts.

GRAFTING WAX of the finest quality; Cheaper to purchase than to make. In large parcels for Nurserymen, or in one pound, half, and fourth pound cakes, for retailing.

F. TROWBRIDGE.
Milford, Conn.

GARDEN GROUNDS LAID OUT.

THOSE WHO WISH THEIR GARDEN GROUNDS renewed and replanted, or those who desire to have Grounds Designed and laid out upon Scientific principles, and with correct taste and skill, as

Adapted to this Climate,

can have this work done to their satisfaction by calling at this Office, where all the best works on Gardening can be found, and where the various Styles, both European and American, can be seen. Grounds of any extent, from

ONE THOUSAND ACRES,

to small Gardens, in our City, will be designed and laid out and the TREES, PLANTS, Shrubs and Vines, and Bulbs all supplied of the very best variety and reliable quality, and the work done to complete satisfaction, by calling at the Office of the California FARMER.

None but Educated men ever engaged in such work.

Address WARREN & CO.,
Farmer Office.

TO THE WORKING CLASS.—We are now prepared to furnish all classes with constant employment at home, the whole of the time or for the spare moments. Business new, light and profitable. Persons of either sex easily earn from 50c. to $5 per evening, and a proportional sum by devoting their whole time to the business. Boys and girls earn nearly as much as men. That all who see this notice may send their address, and test the business, we make this unparalleled offer: To such as are not well satisfied, we will send $1 to pay for the trouble of writing. Full particulars, a valuable sample, which will do to commence work on, and a copy of "The People's Literary Companion"—one of the largest and best family newspapers published—all sent free by mail.—Reader, if you want permanent, profitable work, address E. C. ALLEN & CO., Augusta, Maine. 32-13

Choice Plants.

We offer, also, Large and Fine Plants of the American Aloe or CENTURY PLANT.

PAMPAS GRASS,

A Showy, Handsome and Graceful Ornamental Variety

JAPAN LILLIES,
Rare Kinds ROSES,
GERANIUMS,
HELIOTROPES,
FUCHIAS,

We have the true English Ivy, the ORIGINAL STOCK from the walls of "Windsor Castle," England, with all other desirable plants.

Send orders to

FARMER OFFICE

A Live Young Man Wanted.

AN ACTIVE energetic, thinking, Young Man, from 14 to 18 years of age who writes a good hand, and is quick in figures. One who is orderly in his habits, free from irregularities, and can produce unexceptionable Testimonials of Character, can find permanent employment in the Business Office, and Reading Room of the CALIFORNIA FARMER.

A GOOD YOUNG MAN can find where he can win steady preferment for years. None need apply without the best of references. Apply only between 4 and 6 P. M., at 320 Clay Street, up stairs.

33 1 FARMER OFFICE.

GOLDEN EAGLE HOTEL.

Farms for Sale

Vineyard Lands for Sale or to Lease.

SAW AND PLANING MILL

FOR SALE AND TO LEASE.

PAPER MILL, LAUNDRY AND FACTORY SITES

FOR SALE AND TO LEASE

Greenbacks Received in Payment.

BY S. BRANNAN.

No. 420 Montgomery Street, San Francisco.

JULIUS WETZLAR, Agt.
Capital Bank, Sacramento.

L. B. AYER, Agt.
U. S. Land Office, Marysville.

K. H. MILLIKEN, Agt.
Calistoga Hotel, Calistoga.

Eighteen farms, 160 acres each, for sale.

In Yuba county, eight miles from Marysville, five miles from the Oregon and California Rail road, on the south side of the Yuba river, near the foothills; well wooded, good water, and good grain or vinyard land.—Terms—one-third cash and the balance in two annual payments. Title, United States Patent.

ALSO, FOR SALE.

Eight farms, 160 acres each,

Three miles above the Calistoga Railroad depot, in Napa county. Terms as above.

ALSO.

Town Lots and Villa Residences.

For sale at Calistoga; numbers of acres of land in quantity to suit purchasers, and liberal terms to those that will make improvements.

ALSO, FOR SALE

Lots of Land.

From 10 to 30 acres—to be planted in Vineyard and Mulberry Trees—vines and trees furnished for planting. One half of the land planted to be received in payment, at the end of four years. None but those that thoroughly understand the business need apply.

ALSO.

Vineyard Lands.

For sale in Napa Valley and Calistoga, in quantities to suit purchasers, on long credit and no interest required from those who are experienced vine dressers

ALSO.

Two farms 115 Acres each.

Two miles above the St. Helena depot, on the line of the Napa Valley Railroad. Terms as above, in Greenbacks.

ALSO, FOR SALE.

Several small farms.

From 30 to 50 acres each, adjoining the town of Calistoga; four hours by rail and steamboat from San Francisco and Sacramento, and five hours from Marysville

ALSO, FOR SALE.

Town lots.

In Calistoga and Sacramento, without improvements, on the same terms, Greenbacks.

ALSO.

Ten farms of timber land.

In Napa County, near the line of the Railroad, at a very low figure. Payments for the same can be made in chopping and hauling wood off of the same.

ALSO.

Twelve farms on the Feather River.

160 acres each—24 miles from Sacramento city, and sixteen below Marysville, on the north side of the river at Nicolaus Ferry, four miles from the California Pacific Railroad.

Long credit to those that improve and are good farmers.

ALSO, FOR SALE.

Six tracts of land,

Within 2 1-2 miles of Napa City, varying in size from 50 to 200 acres and in price from $20 to $400 per acre.

ALSO.

To lease, at Calistoga

One Sawmill and Shingle and Planing Mill, 25-horse power.

ALSO FOR SALE OR LEASE,

A good location for a Paper Mill.

At Calistoga. Boiling water furnished from hot springs adjoining the Railroad, and near the Depot.

An inexhaustible supply of tule can be found on the line of the Railroad, within 1 1-2 hours of Calistoga.—Tule is now known to be the cheapest material for the manufacture of printing and wrapping paper. An unlimited supply of wood and water in the vicinity.

ALSO, FOR SALE OR TO LEASE,

A Factory.

An excellent location for a Factory on Napa River, at Calistoga. A 25 horse power steam engine is now in running order on the premises.

ALSO TO LEASE,

A Laundry.

Adjoining the Railroad depot at Calistoga, a good location for a Laundry—with a hot spring of 2 4 degrees heat—time, 3 1-2 hours from San Francisco.

ALSO, TO LEASE,

A Vegetable Garden.

A first class Vegetable Garden at Calistoga, with natural heating apparatus from Hot Springs for the greenhouse; everything furnished for working it.

ALSO, FOR SALE.

Houses.

The two story frame houses, Nos. 117 and 119 O'Farrell street, between Stockton and Powell, San Francisco.

ALSO, FOR SALE,

A Hotel in Sacramento.

On J street, between First and Second streets, near the Central Pacific Railroad Depot; contains 34 Rooms, Billiard and Dining Rooms and Kitchen.

ALSO, FOR SALE,

NEW AGRICULTURAL BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz.: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS in those parts needing such illustration; so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

THE FIELD AND GARDEN VEGETABLES OF AMERICA By Fearing Burr. Containing descriptions of all Vegetables, their different species and varieties grown in this country, with full illustrations of them.....Price $5 00

Miscellaneous.

OIL CAKE MEAL!

THE BEST FEE KNOWN

FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal; and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent; Barley Meal, 13 per cent; Oat Meal, 18 per cent; Oil Cake Meal, 22 2-100 per cent. For life-sustaining properties to all stock are -ed to sudden changes of weather or over-driving! [illegible]

For MILCH COWS particularly valuable, increasing the quantity of milk and giving its quality to a far greater extent than any feed known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food; generally mixed with the mash of bran, slops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair.

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($25 per ton,) it is the cheapest feed in market. It is now selling in New York at $42 per ton, gold; at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

PACIFIC OIL & LEAD WORKS,

NOS 3 AND 5 FRON STREET,

32 18 San Francisco.

TRUE'S IMPROVED POTATO PLANTER.

This is, undoubtedly, one of the most valuable Machines adapted to Agricultural purposes ever introduced.

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such sized slices as the farmer may prefer; drops these pieces with the most perfect regularity, and covers them perfectly, and does all this as fast as a horse can walk over any ground that can be plowed

No intelligent farmer can fail to see that an implement with which one man can, with the aid of a horse plant six acres of potatoes in a day, is of inestimable value; because the days in which PLANTING can properly be done are very few, while he has all SUMMER and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attending to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor-Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune with it.

Particulars and Catalogues can be had at our office.

Home Miscellany.

San Francisco, Jan. 20th, 1870.

COL. WARREN, Editor *California Farmer*:

DEAR SIR.—Should you deem the article I send worthy a place in your popular, and highly valued paper, please accept.

May heaven bless the noble exertions you have made, and are still making to place before the people a representative of God's most independent children, viz—the FARMER.

Very Respectfully yours. ZORA.

TO LILLIE.

Come to me darling, my heart it seems breaking,
Slowly, but surely while sad, and alone;
Oh! how it throbs asleep, or awaking
To kiss you again, my own precious one.

Come to me birdie, and cares will be lighter,
Heart aches will cease though burdened with fear;
No matter the storms—the earth will be brighter
And smiles chase away the fast falling tears.

Come to me *loved* one—Mother is weary,
Waiting for thee, long absent afar;
Life itself is a desert most dreary
When distance obscures my beautiful star.

Come—for my lips are fevered, and burning
From fires of the love consuming my soul;
Sighing I watch thy tardy returning
As days into months, toward eternity roll.

Come—for in slumbers thy *dear* form is near me
Close to my side once more as of old;
Songs like the robin warbled to cheer me
While fondly I smooth out, thy ringlets of gold.

Come—for the old Year went silent, and weeping,
The New one began, with visions un-seen;
For *me* it will dawn when *thou* art sleeping
Entwined in my arms, and happy in dreams.

BUSINESS EDUCATION FOR GIRLS.

BY MME DEMOREST.

Useful compensated labor affords the only means of independence and of growth—physically, mentally, and morally.

Men have learned the lesson long ago—no man is respectable, in the highest sense, who is an idler. The active *only* have the true relish of life, for they who know not what it is to labor know not what it is to enjoy. It is exertion that renders rest delightful and sleep sweet and refreshing. The wealth of to-day is the accumulation of labor of the past, and remunerative work not only accumulates wealth and comforts, but gives the ability to use judiciously and take care of the means accumulated; therefore the regular prosecution of some purpos or profession which engages, helps and enlivens all the powers, affords the only means for the elevation or independence of women—work, not daintily performed, as a pastime, but undertaken with energy and with resolution, and without the spirit of vain repining that sinks under misfortune, or yields easily to temptation. Looking from the standpoint of the views at present entertained by the greater portion of our own sex, it is evident that, before this truth shall be comprehended in the proper light, a vast change must come o'er the dreams—the dream of chivalry in man—weakness and incapacity in woman to become self-s orting. There is really little difference in the natural capacities of individual; the difference arises from the exercise and consequen growth of latent faculties. Educate young men as most girls are educated, excepting somebody to provide for them—they acquire habits and tastes of extravagance while enjoying the social advantages that wealthy parents give their children—and the result is invariably want of ability to keep an inheritance, to say nothing of adding to it. If men, with their assumed superior capability for making money and managing it, stand thus in need of practical education to insure success, why charge woman with want of ability in these respects, when few opportunities are given for the needed experience?

When wealthy parents find proved that "riches often take to themselves wings" they recognize the folly—more than that, the wickedness—that environs a daughter with circumstances that make her only a recipient of favors, when her highest good is the development of faculties which are born or strengthened only by action. Among men, *remuneration* is the acknowledged *lever* of action, and is as general as it is positive. For this reason, parents, teach your daughters some remunerative business. Select for them as you do for your sons,—according to natural or apparent capability. No longer expect of them proficiency in an endless round of what are called domestic duties, whether they like it or not, and any department of which is a science in itself.

A woman is expected o know a little of everything, and nothing thoroughly or scientifically under the present system of training, or rather want of training. It is, therefore, quite impossible that she should possess any special ability. A daughter often resembles her father in temperament and personal appearance—why should she not inherit the genius or capacities that have made him successful? The truth is women are adapted to many professions and a variety of employments. Looking back upon the past, we find many who have been successful in their rebellion to the established code, and who have won high rank or favor as reward for their courage and perseverance. With all the repression and exclusion, a galaxy of female names,

"Like orient pearls at random strung,
Adorn the world of literature."

and every year the range of remunerative advocations is widening. New ones are undertaken suited to various degrees of capability and refinement. Female professors occupy college chairs, and in the medical profession women have, within the past few years, completely triumphed over prejudice and jealousies of the entire male fraternity, meeting odium and vituperation with a dignified bearing that won them golden opinions from all classes of society. Telegraphing, book-keeping and type-setting are being successfully pursued, and the way now is comparatively clear; yet no eminent position in life, it must be remembered, is attained without prompt and earnest effort to all its difficulties. Women must work *from* themselves and for themselves. It is against all law to expect mental or physical strength or abilities without the equivalent *personal* effort to attain these several qualities. This is admitted in the abstract; but women, at least, have not worked in accordance with the law.

Women are accustomed to look on obstacles as exceptional; and, borrowing their fancies from the poetical imageries of chivalry, expect to find only roses in the new line of action. The majority of men accept difficulties as a rule, and grapple earnestly with each and every hindrance interposing between the desire and the attainment of the position they have in view; it only remains for women to do battle as determinately to conquer. Let opinion cry you down scornfully as it will, meet it with indifference, with a religious sense of duty, with truth, and without fear.

The barriers of conventionality have been raised so high, and so strongly cemented by long existence, that the only hope of overthrowing them exists in the union of numbers linked together by common opinion and effort. The voice of one or two, or a dozen women, however zealous in the cause, would be lost in the clamors of denunciation; but the united watchword of *thousands* would strike at the foundation of the false system and annihilate it.

Therefore, to daughters, I say, fit yourselves for some congenial business or profession that will reward your labor—as men learn trades—so that the results of your labor may demonstrate the hand and genius of a master workman in its accomplishment, and the great world which has need of proficiency, of every germ of talent, of every resolute worker, must, by force of the mysterious magnetism of your power, recognize your claims to equality upon this plane with man.

WOMANS POWER OF ELOQUENCE.

Whatever careers may be interdicted to women, it is odd that Society should ever have laid lecturing under the ban. There is no average woman of culture and sense who does not talk better than the average man of culture and sense. And the great orators among men have been they who, with the masculine intellect, united the feminine temperament That is, they have been they, in whom sentiment, grace, love of color, form, light, ornament, the picturesque and dramatic instinct, were most pronounced. The best woman orator, then, ought to be more persuasive than the best man orator. And the special aptitude of women for this vocation ought to have sent upon the platform, before this day, at least ten admirable lecturers of the more eloquent sex to every hundred peripatetic philosophers of the more logical.

But *because* women had to conquer a land plainly and logically theirs by right; *because* they had not only to do their hard work like men, but to excuse themselves for the honorable service—therefore it behooved them to do it so triumphantly that criticism itself should forget the condition of sex and see only the result of endeavor. It was not enough to be entertaining, to be bright, to be witty or sarcastic, or clever, or even eloquent.—The problem for every woman who decided to take her life in her hand and lift up her voice on the platform was the problem presented to the very greatest and loftiest orator of the land. To be fully persuaded in his own mind of the worth of the thing he had to say, and then to say it with such clearness, with such precision, with such unassailable logic, with such hidden force of facts behind it, with such sincerity, with such nobility of thought, with such charm of expression, that he who heard it, if unconvinced, should be ennobled by the atmosphere of its truth, and gladdened by the spell of its beauty.

Something very much less than this satisfies audiences, indeed. Something very much less seems to satisfy most speakers. But no woman, coming to this work as to a vocation, has a right to demand less of herself. Achieving less, she is a failure, though she crowds halls and grows rich. Miss Dickinson is born an orator. She has the magnetic, dramatic, intense temperament. She has a voice of wonderful strength and responsiveness. She has a noble and beautiful presence.—She has a lofty ideal, a strong purpose, profound convictions, a tender power of idealization, and a terrible power of truth-telling. What she has lacked in these years of hers is hard work, patience, consideration, fairness, logic. Her intellect is clear, quick, subtle. Her intuitions are fine.—She thought *of* her subjects, but did not think them *out*. And so her most patient hearers, her best lovers, and her hopefullest believers grew tired of waiting for the excellence so long delayed. She gave no lecture which was not full of possibilities of greatness; she gave none which was great. But her Summer's rest and experiences, its study and reflection have done much to refine and develop her. The Lecture of last night was in a higher strain than any she has given. The seeming flippancy which often pained, the smartness and repartee that made the unthinking laugh and the judicious grieve, the begging of questions, the assertion for argument, the climaxes for conclusions—all these were not. A serious-eyed woman, overburdened with the weakness and the woes of women, came to tell her story seriously, and to leave its moral with her hearers. She told it bravely, purely, simply, eloquently. The faults of last night were those common and easily mended ones of a tendency to prolixity, and an emphasis of points that needed no emphasis—the faults, indeed, of an unwritten speech. But the dauntless little lady is working hard, and already a finer dignity, a sweeter persuasiveness, a loftier moral power, appear in her, an intellectual force which is new. It was a lecture to make men tenderer and women thoughtfuller. It was a lecture worthy of the clear brain and the great heart of the woman who gave it.—*New York Tribune.*

WOMANS RIGHTS.

The question I should like to see decided is, What are Woman's Rights? Can any one answer? I think the women have rights enough if they will but use them to the best advantage. The best right they have is to be good, dutiful housekeeping wives and mothers; make their husbands and children happy. If a woman realizes her position in this life, she will never seek for happiness in the public hall or at the polls.—*Daisy Earl in Boston Cultivator.*

[The above extract was published in the FARMER some little time since, and to which our agreeable and sensible correspondent, Jenny Dare, now replies.

"Jenny," however brave she may be in her satire upon the Sultan of Salt Lake, overlooks the fact that Congress is about to put a stop to Marriages at wholesale, and instead of the Massachusetts girls finding a Home in Utah, there will soon be several thousand widows, or deserted wives to be *divided* among the several States, therefore Jenney's plan won't do.—ED. FARMER.]

"Daisy" is a Mormon. There is not a doubt of it.

Figures, which cannot lie, prove it—in Massachusetts there are thirty thousand more women than men—now how is this army of thirty thousand strong to obtain its "best right," unless it marches *en masse* upon Salt Lake?

I had read in the newspapers that the Sultan of Utah had despatched a band of his emisaries to New England on a proselyting mission, but I little dreamed of discovering one of them disguised as a simple Field Flower.

As to the last proposition in the above extract, it has my unqualified assent. I should be very much amazed indeed, to hear that Happiness had taken up her abods, either in the public halls, or at the polls. And if any sanguine individual, of either sex, have any "great expectations," of meeting the Goddess in those places, he or she will be most grievously disappointed.

JENNEY DARE.

Santa Clara College, S. J.

SANTA CLARA, CAL.

NEW

Russian, Turkish & Roman BATH HOUSE.

No 524 TO 528 PACIFIC STREET,

DR. ZEILE INFORMS THE PUBLIC THAT his New Bath House is now open for the accommodation of patrons. Neither pains nor expense have been spared to make this the best and most commodious establishment of the kind, either in Europe or America.

Convenient and separate apartments are afforded for the administration of bathing by Steam, by Hot Air, and by Plain or Medicinal Waters.

Trained and polite attendants will use their best efforts to give complete satisfaction.

DR. ZEILE has also attached to his bathing establishment a few handsomely furnished Suites of Rooms, where he will receive and entertain patients for treatment, who are not affected with any contagious or infectious disease. To secure this accommodation it will be always necessary for engagements to be made in advance of the arrival of the patient.

Open daily from 7 A. M. to 9 P. M. On Sundays from 7 A. M. to 2 P. M. 31 23

Miscellany.

THE PHOSPHORESCENCE OF THE SEA.

Every one recognizes the beauty of the singular phenomenon that we call the phosphorescence of the sea, and has watched the track of foam and diamond points of light left behind as the steamer cuts the wave. For a long time the cause of the shining appearance was a puzzle to philosophers. But the naturalists finally came to the conclusion that it is produced by animalculm, which are excited to luminosity when the water is agitated.—It was also shown that the phosphorescence is brightest, and the sparks most numerous, immediately preceding an atmospheric disturbance—Thus, the little animalculm must be included in the long list of delicate organisms that feel the approach of bad weather. Professor Decharme observed this coincidence and has been diligently studying the habits of the tiny creatures and their shining propensities. He tells us, as the result of his observations, that they are visible in the daylight with a glass magnifying about forty times.—They are, under this magnifying power, of a lens shaped form, and from seven to fifteen-hundredths of an inch in diameter. They are of a transparent nature, more diaphanous in the centre than around the periphery of their little bodies. The specimens experimented on by the Professor lived in a bottle for several weeks, and become very brilliant when the water was shaken or stirred, or whenever a small quantity of exciting fluid, alcohol or acid was introduced into it. We shall look hereafter with increased respect upon these infinitesimal barometers, which fully developed, attain the size of from two to four-thousandths of an inch! We wonder how many of them it takes to make the track of sparkling foam so often watched, upon the ocean.

Losses by Fire in 1869

See the Fire Fiend.—Computing only the losses by fire of $20,000 and upward during 1869, we have an aggregate loss in the United States of $40,684,000, against $34,757,000 in 1868; $36,905,000 in 1867; $66,410,000 in 1866, and $43,139,000 in 1865. The total loss by fire in the United States for fourteen years, from 1856 to 1869, amounts to nearly $400,000,000. Last year Philadelphia lost $7,535,000—the amount by the destruction of the whiskey bonded warehouse on Front street being more than half of the total.—The total loss by fire in New York last year was about $3,350,000, or less than half that of Philadelphia.

Earthquakes.—The volcanic action, which has been on a circuit all over the earth since the middle of last year has not found its termination—Not only from the middle Rhine, from Thuringia, but also from the northen coast of Africa, reports reach us of prolonged shakings and movements of the ground, in many instances of pretty severe shocks of earthquake. From five towns in Algeria, reports are before us which speak of the damage done by earthquake shocks in November, but nowhere very serious disasters have occured.

A Furrier in Cincinnati recently conceived the brilliant idea of sewing a man up in the skin of a "grizzly" and sending his bear man out to distribute shopbills. As the kindly animal proceeded down the street, with a club in one paw and a bundle of circulars in the other, children fled, women screamed, dogs barked, horses reared, a milk cart was demolished; the police rushed to the rescue, the bear was marched to the mayor's office, and the enterprising dealer in skins, found himself most nobly and gratuitously advertised in all the newspapers next morning

The Kaffir chiefs recently got up a "corner" in wives. In that primitive country cows are established currency, and wives are bought and sold in open market. The chiefs recently combined to lock up the vaccine currency, and having accomplished that object, suddenly flooded the market with cows, and bought up all the marketable wives in the country. These wives they are now holding with the intention of bulling the market until their prices rise a hundred per cent.

In Iceland, if a minor commits a crime the parents are immediately arrested, and unless they can prove, to the satisfaction of the magistrate, that they have afforded to the child all needed opportunities for instruction, the penalty of the crime is visited upon them, and the child is placed under instruction.

Ohio has 1,028 675 children between five and twenty one. There are 22 372 more boys than girls. Prolific country. Blessed country for Mothers. Oh, high O.

The amount of money transmitted by the postal money order system during the past year is $16,000,000, and during the fiscal year ending June last, is $46,000,000, requiring 2,300,000 orders.

Gardeners, Foremen, Etc.

Those who desire to secure good and reliable Gardeners, Orchardists, Vine-pruners, and Foremen upon their Farms, can be supplied from our Office by sending notice of such wants, and giving us the special duties they desire performed, the wages they will pay, and all the particulars of board, washing, etc.

—It will be our purpose to send out no person that is not fully qualified for the specific duties desired, nor any man who is not of good character, nor shall we send out any man until, by a proper test, we know he is qualified in every respect.

Having long experience in this business and knowledge of what is wanted, we shall only give employment to the *Best Men*.

For our time, examinations, correspondence, etc., we shall expect a compensation that will repay us.

MERCHANTS'

GARGLING OIL

IS THE

BEST LINIMENT

IN THE WORLD

FOR MAN AND BEAST.

36 Years in Use.

G

Is good for Rheumatism, Chilblains, Corns, Whitlows, Caked Breasts, Sore Nipples, Cramps, Boils, Bites of Animals Weakness of the Joints, Contractions of the Muscles, Burns and Scalds, Frost Bites, Painful Nervous Affections, Chapped Hands, Lame back Pain in the Side, Swellings, Tumors, Tooth Ache, Old Sores, Hemorrhoids or Piles, Flesh wounds, Galls of all kinds.

A

Sprains, Bruises, Cracked Heels, Ring Bone, Poll evil, Wind galls, Callous, Spavin, Sweeney, Fistula, Skitest, External Poisons, Scratches or Grease, Springhalt, Sand Cracks, Lameness, Strains, Founded Feet, Mange, Horn Distempers, Garget in Cows, Cracked Teats, Foot Rot in Sheep, and many other diseases incident to Man and Beast.

R

R. D. Taylor, of Concord, Ky, says the Gargling Oil cured a horse of his, injured while plowing by attempting to step over a stump, almost severing the thigh from the body; also that he has used it in his family for fifteen years, and is the best remedy for Cuts, Burns, Bruises, Frost Bites, Strains, Rheumatism, etc., he ever used.

G

From Crump & Bros., Lochrane Landing, Ohio, Nov. 29th, 1856—We are pleased with your medicines. It has been the means of curing a great number of different diseases upon persons, as also upon horses. We think it cures all you recommend it to do. We want you to send us the larger proportion of the variety for "Family Use," in small bottles.

I

From Dr. J. P. Terrell, Warren, Ind., March 3d, 1856—I am engaged in the practice of medicine, and find your Gargling Oil an extremely efficient remedy in all cases where an external application is indicated.

From Dr. G. B. Neal, Burris, Iowa, 1855—I have practiced medicine in this county seventy years, and cheerfully recommend your Gargling Oil as the best liniment to use.

N

From Dr. T. W. Ellis, Troupville, Ga., Jan. 6th, 1856—If I could receive both boxes of the Gargling Oil it would not be too much, as I think I could soon find sale for it all, the inquiry being frequent since it is supposed that I have it for sale

From Dr. Wm. S McCall, Chamois, Mo., Nov. 9th, 1859—Your Gargling Oil is taking the shine off from all liniments of the day. If you desired them I could procure dozens of certificates from the best citizens of the county.

E

Messrs. McLain & Bros., Wholesale Druggists, Wheeling Va., say, under date of July 24th, 1856 that they can safely recommend the Gargling Oil for more diseases than it is recommended for

From J R. Fisher, Uniontown, Pa., June 31st, 1857—Your Gargling Oil is doing much better here than formerly, since its virtues have become known—and the bottles put up for Family Use, without Stain, are much sought for.

S

Extract of a letter from Hon. Nathan Lindsey, County Judge of Shelby county, Iowa, dated Harlan, April 18th, 1857 It is decidedly preferred to any other liniment sold in this section.

Extract of a letter from Samuel S Hupp, dated Fallsburg, Ohio, July 17th, 1856—In June last, Henry Sallie had a yearling colt that had what was supposed to be Diphtheria, for more than ten days, so that it could not eat, and the throat swollen almost shut, and by the use of three or four applications of the dollar bottles, did the desired effect.

From A G. Nicl, Lewisville, Cochocton county, Iowa, March 1852—I have used your Gargling Oil for the scratches on my horse, and it cured it with the first application.

O

From Enos Mather, Middleport, N. Y., July 23d, 1850—I purchased a bottle at your Gargling Oil of your Agent, A. S. Baker, at Middleport, and as yet have used but half of it. I think it has given me more relief in a case of severe rheumatism of long standing, than anything I have ever used before.

L

Extract of a letter from J. O. Pratt, dated Quincy, Chautauque county, N Y, August 12, 1851—I have been acquainted with your medicine, (Gargling Oil) for the last fourteen years It has proved to be a sure cure for Foot Rot in Sheep, for which I have sold the last bottle, and have calls almost daily for more. Please forward as soon as convenient.

L

Always enquire for MERCHANTS' CELEBRATED GARGLING OIL, and take no other.

Retail price, $1 00, 50 cents, and 25 cents.

Shake well before using, and rub on thoroughly before the fire or some warm substance

The Gargling Oil has been used as a liniment for thirty six years. All we ask is a fair TRIAL, but be sure and follow the directions.

Ask your nearest druggist or dealer in Patent Medicines for one of our Almanacs and Vade Mecums, and read what the people say about the Oil.

The Gargling Oil is for sale by all respectable dealers throughout the United States and other countries.

Our testimonials date from 1833 to 1862, and are unsolicited Use the Gargling Oil and tell your neighbors what good it has done

We deal fair and liberal with all and defy contradiction.

Manufactured at LOCKPORT, N. Y.,

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attach es to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Comb, or Gum:

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H.&L.

Is on the red cover of the package

Railroad Lands.

CENTRAL PACIFIC RAILROAD,
LAND DEPARTMENT.

Sacramento, March 1st, 1867.

The following statement is made for the information of those who desire to purchase Lands from said Company:

1st. Congress has granted to the Company, all the alternate sections of the public lands designated by odd numbers, within a distance of 20 miles on each side of the railroad;—excepting lands to which a pre-emption or homestead claim had attached prior to the 12th of September, 1862, and excepting lands reserved by the United States as mineral.

2d. The Company has no interest in even sections. To constitute a valid pre-emption or homestead claim within the above exception, the party must have resided on the land prior to September 12th, 1862, and continuously since that time. He must also on that day have been over twenty-one years of age and be the head of a family and have filed his claim in the United States Land Office within the time required by law. If he has not these requisites, or has neglected to file, he will have to buy of the Railroad Company.

3d. All persons who desire to purchase lands from the Railroad Company, including settlers, pre emptors, and other claimants, should make application to the Land Agent, B. B. Redding, at the Land Office of the Company, in Sacramento, either personally or by letter, describing the land by legal subdivisions. This application will be filed and the party will be allowed three months to complete the purchase, and during this time the land will not be sold to another without giving such applicant thirty days previous notice. If the purchase is not completed within three months, the land will be open to purchase by others.

4th. Persons who have valid pre-emption or homestead claims to any tract on an odd numbered section, can purchase the same from the Railroad Company at the Government price of $1.25 per acre in greenbacks, and upon the usual credit of five years if they so desire, by filing an abandonment of their claim in the U. S. Land Office, blanks for which will be furnished by the Land Agent of the Company. Such purchase from the Company has these advantages over a purchase from the Government: The party can leave the land if necessary—he can sell or mortgage it—he is saved the payment of lawyers' fees and expenses of witnesses to go to the Land Office to "prove up" his claim—he can get his title perfected in less time—and he can buy on credit at a low rate of interest.

5th. Actual occupants of lands belonging to the Company, will generally have a preference in the purchase at the regular price. No addition to the price is made where there are improvements on the land made by the settler. Where there are conflicting claimants who apply to purchase, an adjudication of their respective claims will be made by the Land Agent, upon due notice given to both parties.

6th. No lands are sold by the Company or the Government, until after they have been surveyed and the plats returned to the Land Office.

7th. The Company sells ordinary agricultural lands at $2 50 per acre, in gold (except sales to pre-emptors as above). Timber lands, lands in the immediate vicinity of the railroad, and tracts having special value above ordinary farming lands, will be sold at prices and on terms fixed by the Board of Directors.

8th. Persons desiring to do so can buy on a credit of five years by paying twenty per cent. of the price down, and interest annually in advance on the remainder at ten per cent. per annum. Thus a purchaser of one hundred and sixty acres at $2 50, which amounts to four hundred dollars, will pay twenty per cent., or eighty dollars, with interest on three hundred and twenty dollars, which is thirty-two dollars—in all one hundred and twelve dollars, paying each year thereafter thirty-two dollars interest, and the three hundred and twenty dollars at the end of five years. The three hundred and twenty dollars can be paid at any time within the five years, but not by installments, and the purchaser will then be immediately entitled to a deed

9th. Applications to purchase lands can be filed in the Land Office of the Company at any time after the same have been surveyed by the Government; but no applications will be acted upon until three months after the maps have been filed in the United States Land Office. Occupants of the railroad lands who desire to purchase should therefore be prompt in filing their applications in the office of the Company within this time. Blank applications will be furnished to all who desire to purchase. No sales will be made except by legal subdivisions according to Government surveys. Purchasers can buy as large an amount of land as they may wish.

10th. No sales are made by the Company until the land is listed over to it by United States Land Officers. Purchasers are thus assured that the title they obtain is perfect.

Produce Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer on the wharf or landing places.

Corrected Weekly, by EDITOR FARMER.]

SAN FRANCISCO, Jan. 20th.

The Grain Market this week presents nothing more promising than last week, and from the condition of the European Markets, now low and still falling, there is no possibility of any rise in price of grain, so as to cause any demand for export to Europe.

The present unprecedented low rate of European freight, lower than ever known here before, is the only reason why any shipments could have recently been made.

It should be borne in mind by our grain growers, that when charters can be obtained at such extraordinary low rates, purchasers of grain can afford to pay more for the grain. Such purchasers only look to one result: Can they purchase grain and charter a vessel at a given price, so as to secure *the commission*? This is the main thing for them; and commissions earned sure, it matters not to them who gets the best bargains—the owner of the ship that carries the grain, or the producer of the grain—the commission secured is the chief aim.

The present copious rains, which, by our advices, now make sure to reach very generally all parts of the State, must affect the price of grain now on hand, for the large area planted must insure an enormous harvest for 1870.

This is a satisfactory solution to the cause of the *present price* of Extra Wheat for milling, which now brings $1 60 @ $1 65, and some few lots a little more. This occurs from their being so much poor and shriveled grain that extra parcels will bring an extra rate, but not in any large lots nor for export.

Our grain growers, the present year, we hope have seen enough to convince them that poor cultivation, shallow plowing, and late planting, will not give them good sound wheat, while upon all our "Summer fallowed" land the wheat was choice and good, paying largely for this kind of cultivation.

The present season should teach Farmers to think more about the markets and the *time to sell*. For some 18 months or more, several Journals claiming great influence have very unfortunately led our grain growers astray, by inducing them to engage in the "Hold on" business. The real result of that abominable system has nearly ruined many of our Farmers. We hope they will bear in mind those Journals, and those parties that have so misguided them, for we believe they did it knowing they were wrong.

Retail Prices in the Fruit Market.

The collection of Fruit offering grow less and less. The collection of Apples are still rosy color and bright, and are good as need be, but our Pears have, like some of our legislators when wanted, *pear-ed* off.

Dried Figs, Prunes, Oranges, Lemons, and Foreign Fruits, with Nuts in great variety, now make up a very good desert. All these are plenty and reasonable in price.

Shade Trees! Shade Trees!!

ORNAMENTAL & SHADE TREES

LARGE COLLECTION OF TREES.

EXTRA SIZE SHADE TREES

Elm and Ash Trees.

A lot of very choice and large size ELM and ASH Trees, for PUBLIC SQUARES, and STREETS, will be offered in Lots to suit Purchasers.

Mulberry Trees.

Large size Mulberry Trees, White Red, and MORUS MULTICAULIS, of all sizes, suitable for planting out as Shade or Ornamental Trees, and also as Fruit Bearing, or for feeding the Silk Worm

The Mulberry Tree makes a handsome Shade Tree, and is an Ornamental and Fruit Tree combined

These Trees will be sold in lots to suit purchasers.

OSAGE ORANGE TREES.

A few lots of Osage Orange Trees for setting out as Ornamental Trees. Also

SILK WORM EGGS:

Of the FRENCH ANNUAL SPECIES, for sale

The above will be sold on the best of terms.

P. S.—Orders addressed to A. P. Smith, will be promptly attended to.

Sample Trees can be seen at the FARMER OFFICE, where information of the quality of the Trees and the price can be had.

A. P. SMITH.

Of the well known SMITH'S GARDENS,

Sacramento City, Cal.

COMMISSION SALES-ROOM — AND — Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall with that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns, and which we have the exclusive sale for this Coast.

We also call attention to the

NEW GATE,

A most valuable invention, particularly to Farmers and Stock Raisers. County Rights for sale.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

The following are the kind of Goods imported or consigned to us for sale and which can be offered on the most favorable terms:

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown.

FINEST MIXED LAWN GRASSES,
FINEST MIXED GRASSES FOR
PERMANENT PASTURES.
FINEST MIXED GRASSES FOR SHEEP-WALKS
FINEST MIXED GRASSES
FOR MEADOW-LAND.
PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR CHILI CLOVER,
KENTUCKY BLUE GRASS.
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental

TREE SEEDS.

TOBACCO SEED,
COTTON SEED,
COFFEE SEED,
TEA SEED.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

These will be ready in the months of November and December.

Collections can be forwarded by post at the following rates:

50 Packets choicest and best				$10 00
25	do	do	do	5 00
13	do	do	do	3 00
50 Packets Good Selected				6 00
25	do	do	do	3 00
13	do	do	do	1 50

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference

Silk Culture:

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

FLOWERING BULBS.

Lilies, Tulips, Hyacinths, Amaryllis, Anemones
Ranunculus, Narcissus, Tuberoses, Peony-
Roots, Crocus, Snow-Drops,
Very Choice Gladioli

Choice collections of Flowering Bulbs, comprising all the most showy and leading varieties from $5 00 and upwards.

EVERGREEN AND DECIDUOUS SHRUBS,

ORNAMENTAL TREES.

FRUIT TREES.

The newest and most approved sorts:

Peaches, Figs,
Plums, Almonds,
Cherries, Walnuts,
Apricots, Nectarines,
Pears, Grapes,

PERPETUAL FLOWERING ROSES

Of the best kinds.

GREENHOUSE AND BEDDING PLANTS.

Any one desirous of having their Gardens look gay through the season, can be furnished with the plants at a reasonable rate, by applying at this office.

Every information given as to the cultivation of Plants and raising of Seeds, etc Also respecting the mode and best systems of Pruning all varieties of Trees, etc

Gardens and Grounds designed and put in order, and every article furnished for same.

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference.

WARREN & CO.,
Farmers' Headquarters. 320 Clay Street, up-stairs.

SPLENDID PREMIUMS! 1870!

OUR SEVENTEENTH YEAR

AND

THIRTY THIRD VOLUME

OF THE

"California Farmer."

With the New Volume in January we begin our SEVENTEENTH YEAR of LABOR with this JOURNAL.

THE CALIFORNIA FARMER PREMIUMS.

The CALIFORNIA FARMER will club with the following Magazines and Journals, and furnish them for the year 1870 at the following rates.

The New York Independent,

PREMIUM ENGRAVINGS,

The California Farmer and the Independent both for $7 50, and to present them with Richie's splendid steel engravings of GRANT and COLFAX, the price of which is $2 each, thus giving them the two Splendid and Popular Pictures worth $4, and both these Papers for $7

The CALIFORNIA FARMER and the New York Christian Union, new series, Edited by Rev HENRY WARD BEECHER, $7

The CALIFORNIA FARMER and the Harper's Monthly, Weekly and Bazar, $14

The CALIFORNIA FARMER and either of Harper's Magazines delivered post paid $4

The CALIFORNIA FARMER and the New York Weekly Tribune, $4

The CALIFORNIA FARMER and the American Agriculturist, $4

The CALIFORNIA FARMER and the New York Monthly Horticulturist with extra Steel Engravings of "Country Life," $3

The CALIFORNIA FARMER and the Phrenological Journal of New York now in its 50th Volume, $3

The CALIFORNIA FARMER and the American Stock Journal, $5,

We shall add others with our next issue.

Any other Journal or Periodical desired will furnish with the FARMER on the most liberal terms when desired.

The Terms of the FARMER will remain the same—$5 per year, $3 for six months, (gold price) and $1 extra when payments have been delayed and these terms are unchangeable. A liberal allowance for clubs; when five copies are paid for six copies will be furnished.

We call attention to the Premiums offered, by the Union of other Journals with ours.

WARREN & CO., Editors and Publishers
320 *Clay St.*, San Francisco

GYPSUM.

(Sulphate of Lime.)

This well known but most wonderful fertilizer has not yet been practically introduced into the Agricultural interests or before the minds of the California cultivators, for the reason that there was no supply, and because it was hard to make them believe our lands needed manuring.

The time, however, has arrived when, by the admitted fact of the deterioration of our soil and the lessening of crops, something must be done to restore the soil and bring it into that state of fertility necessary to make it profitable to cultivate the soil.

Gypsum is a compound of Sulphuric Acid and Lime, and the object of this fertilizer is the fixation of Ammonia, thus making it the direct food of plants, either by supplying the Sulphate of Lime or by its decomposition, affording the Sulphuric Acid necessary to the due development of certain plants.

Sprengel's Analyses shows the quantity of Lime and Magnesia, Sulphuric and Phosphoric Acids to be very large in the following plants, and for which this fertilizer has no superior:

Wheat, Barley, Oats, Potatoes, Cabbage, Swedish Turnips, Clover, Beets, Turnips, and root crops generally; thus ensuring to a certainty its great importance to the Farmers.

Liebig's Natural Laws of Husbandry gives conclusive proofs of its superiority as a fertilizer for Clover and Grasses, furnishing details of experiments made by distinguished men in various parts of Europe.

According to the experiments made by Rothamsolts, Gypsum is composed of *thirty-three* parts Lime, *forty-three* of Sulphuric Acid, and *twenty-four* of the water of crystallization.

Gypsum is often called Plaster of Paris, but this is wrong—it only takes that name and character when it has been deprived of its water of crystallization by fire; there it becomes *Calcined Gypsum* or Plaster.

Gypsum for Dry Countries like California, will prove immensely valuable, as when used as a fertilizer in our hot and dry soil, its waters of crystallization are separated by means of our hot climate and go at once to benefit the plants, while the Acids and Sulphate of Lime is taken up by the soil, enriching it to a very great degree.

The undersigned is now prepared to furnish this valuable fertilizer by the quantity to all who desire to try its well attested virtues.

CHAS. J. JANSON,
222 BATTERY STREET.

STILL TRIUMPHANT!

THE COMMITTEE OF AWARDS OF OUR State and Mechanics' Fair, aware of the superior merits of the H. & L AXLE GREASE over all imitations, have again awarded HUCKS & LAMBERT their first premium, their article having stood the test for over fifteen years. They are now prepared to sell their well known Axle Grease at as low a price as any other in the market, New York and Chicago not excepted.

P S.—To consumers—Don't trust to the real grease, ask for HUCKS & LAMBERT'S AXLE GREASE Depot. Manufactory, No. 144 Natoma street.
320 Jackson street.

AMERICAN INSTITUTE FARMERS' CLUB.

SESSION OF TUESDAY, Jan. 11th.

The Hon. N. C. Ely, Chairman. J. W. Chambers, Secretary. A full attendance, a flood of letters, matters of great moment in discussion, many valuable facts developed. The Chairman at first read half a dozen letters from different counties, going to show that Mr. Meeker was entirely mistaken when he said there are chills in Southern Iowa. At present the Club will consider it proved that no settler in Des Moines Valley will ever suffer from malarious affections.

N. C. Meeker—If they don't have lots of ague in Southern Iowa, they don't; and they who live there ought to know best, still, when I heard people, perfect strangers to me, even in Central Iowa, talking about going to new counties, and recommending this place and that because they had no ague, I thought it significant. Still there is little doubt that on river bottoms they do have some ague, and also on uplands when the country is first settled—this was the case all through the West, and even in New York and Ohio, particularly where the land was richest. That the ague dies out as people get forehanded, and as the country settles up, is certain. Now, I am not certain that the ague is the worst disease in the world; indeed, I think it may sometimes be a good thing. It is a great relief when one finds out that he has it, because he knows it is not the consumption or any other disease; and when he gets over it he can eat like a bear and work like a slave.

MOLES.

Joseph Wilson, Little Falls, Passaic Co., N. J., has invented an instrument for killing them, and the Chairman has invited him to appear before the Club and show it.

Dr. Smith—French savans have decided, after minute analysis, that moles eat only flesh, and cannot harm roots.

Andrew S Fuller—Science or ignorance, I know that the American mole will eat the bulb of a lily, of a potato, or any root that has azote in it. I have offered a premium of $100 to any man who will give the world a sure bane for the mole. He damages me $100 every year. The best thing I know is poisoned corn. I cut open the chit and push in a little arsenic; the little rascals eat it, and, upon finding them dead with poisoned corn in their stomachs, I am forced to the conclusion that the mole is not wholly a carnivorous animal, no matter what the French savans declare.

J. W. Gregory—Planting the castor bean will drive them.

Mr. Fuller—Not always. I have bought as much as 250 pounds of the pumace of castor bean, and the moles would run right over it as though it was sawdust. I know of no cure so effective as poisoned corn, and that is not easily applied.

STATEMENT OF A PHILADELPHIA BUTTER MAKER.

I have no difficulty in making good butter all Winter. I keep my milk pantry at 58 degrees, as near as I can, and do not allow the mercury to go much either way from that figure. As Spring cows approach the following Winter—i. e., when their calves are seven or eight months old—the butter comes much harder. For that reason I always like to have Fall cows, so as to mix their milk with that of cows who came in, in the Spring.—The food of cows make a great difference with the flavor of butter. I find clover hay cut moistened sprinkled with meal and wheat shorts, as the best food for making choice butter. It is also important that no weeds be mixed with the hay. Clover I find superior to timothy, or any other grass. I do not feed cabbage nor turnips, on account of the flavor. Cows differ greatly in their qualities as butter makers, and in selecting I find it best to reject many animals that would be valuable in a milk dairy or a cheese dairy.

N. C. Ely—We specially welcome such statements as this of Mr. Wattles; and regarding the letters sent to the Club, I have noted a change that has given me much gratification. We have very few, if any, communications now on the moon, on the reason why some infants have thin skulls, or on the virtue of sorrel as a cure for cancer. We hear nothing of childbirths, of the noxious effects of tea, or the curse that follows the eating of flesh. The letters are strictly agricultural; they pertain to rural affairs only, and are eminently proper to read in a Farmers' Club. We are glad of farm statistics whenever we can get them.

Frank Curtis—In Saratoga County, the other day, a superintendent of a cheese factory told me that in the dairies represented at his establishment the average product had been $90 per cow for the season.

John Crane—I keep from 12 to 13 cows, and my daughter, who is my clerk, informed me on New-Year's Day that beside all we have consumed in the family, the income in money from milk has been, for the year 1869, $1,426, beside the value of three or four calves sold.

MARKET ABUSES AND THEIR REMEDY.

J. B. Lyman, Chairman of the Committee on Markets, presented the following report of progress: Your committee, in an endeavor to discharge the duty assigned to them of suggesting relief from certain wrongs and abuses in the disposing of farm produce in the metropolis, report that the subject is one of great embarrassment as well as of great importance. We find that the country supports a large army of brokers, go-betweens, agents, or middlemen, who make sometimes a precarious living and sometimes excessive gains by handling produce. In the matter of apples, as an instance, thousands of barrels come to the city and sell for $2 75 and $3, or $3 50. They are repacked, and, after rejecting a few of the smaller ones, the most of what remain are sold at $5 We cannot but deem it an injustice that a few hundred men should make half as much, and sometimes fully as much, by selling the apple crop that comes to New York, as the thousands of anxious, hardworking farmers who plant the trees tend the orchards, pick the fruit, and send it to market. So in the article of butter. The up town consumer pays from 10 to 15 cents, and often 20 cents, more than the butter brings at first hands. There are those who think these are matters of trade, and must be regulated by the laws of supply and demand. To show the fallacy of this position, we submit an instance from the practice of a neighboring city. This butter I bought from the farmer who made it. He sells every week, on Wednesday and Saturday, at stand No. 555, in the Farmers' Market Philadelphia. In that city there are no intermediaries, through whose hands the butter slides like the monkey's cheese, losing a nibble on one side and a bite on the other, till the farmer finds himself paid in skim milk and the middleman in cream. If a farmer near Philadelphia makes such butter as this, he sells directly to the consumer. If his make commands a dollar a pound, as this does, he and not the merchant gets the benefit. Yet Philadelphia is a great city. The most of its butter is brought thirty, forty, and sixty miles to market. In handling some kinds of produce there are practicies which we cannot say are just or legal. For instance, when an article like rhubarb is sent, the handler has been known to call the lot, sell the choice at 20 and 24 cents a package, get rid of the leavings at 16 cents and return sale to the farmer at 16 cents for the whole. The practice of returning to the farmer only what the smallest or poorest of a lot has brought is quite common. The farmer can get about as much for a second rate article as he can for a choice product, because the middleman generally pockets that difference, and says nothing On the other hand, there are foul practices which cannot be sufficiently reprobated—farmers who fill two thirds of a barrel with small apples and top out with big fruit—men who put old butter at the bottom of a tub, who water milk and dilute vinegar. This we reprobate just as much as we do the grasping and trickery of non-producers.—Farmers often, very often, ship to a man who does not make it a business to dispose of the article sent. For instance, butter is shipped to a flour merchant, eggs to a fish dealer, poultry to a potato man, or cheese to a hardware house. There is no cure for this but information on the part of the farmer. Large dealers and those who live near generally obtain this knowledge; but those who live afar, who read our weekly paper, and work hard, who must make every edge cut and every ham tell, whose farms are carpeted with mortgages, and whose families are large, how can they be expected to know all the ins and outs of New York, all the tricks of trade, all the wiles of the adversary? I have heard of an instance which will illustrate the machinations that are set for the unwary step. A farmer from New Jersey some years ago came into the New York market, and, by honest deal, built up a wide business. Evil men envied him, and conspired to recommend as a book keeper a man of singular ability in forcing a balance, no matter what the figures might be.—It worked, and the honest Jerseyman was shorn of his hard won thousands, while the ring chuckled. Such are some of the abuses in New York market system. Your Committee has no sure cure, no patent medicine for these ills. But we wish to fix the attention of farmers to the subject that they may combine for their protection. We recommend: 1. A thoroughly honest packing on the part of the producer; no decayed potatoes with the sound; no frowsy butter in the pail with good; no light weights; no weeds in clover hay; no thick plank at the bottom of the half bushel. Let the farmer inform himself as to the houses that make a special business of handling what he has to ship, and be reasonably sure of their solvency and good repute. 3. Your Committee recommend that farmers form clubs in every considerable village, and send their most vigilant and capable man, paying his car fare, if necessary, and requesting him to inform himself accurately of the best men in the produce and marketing business. 4 There is need of some bureau or committee, or commissioner of some description, whose business it should be to give such representatives of farmers' unions the information they need. In the city where it is reputed that every man has his price—where offense's gilded hand may shove by justice—the farmers may find it difficult to secure a friend to keen to be hoodwinked, not afraid to speak a wholsome, though unwelcome truth—too lofty to soil his fingers with a percentage; but the producing class of this country need such friends more than they need a Senator or a Minister to the Court of St. James.

Mr. Ely—This report is not final. The committee on markets will continue their good work and show up all the wrongs and mischiefs of our system. We hope they will in their wisdom hit upon some happy exit from all our troubles.

SOILING CATTLE.

We give the following most valuable report of practical experience, from the distinguished Stock Raiser, Hon. Josiah Quincy, of Massachusetts.—From his little Book on this subject we take this experience. This chapter of knowledge is in full accordance with the valuable Essay, by Hon. H. Greely in this number of the FARMER on page 10, both of these Essays are worth their weight in gold to our Farmers.

The result of my experience has been perfectly conformable to the statements made by European writers.

My stock has been uniformly in a condition generally superior to my neighbors', and of whom pastured their cattle. In point of milk, during the flush of feed in June, the product was not inferior to any, according to the number of my cows with which I had an opportunity to compare. In July and August, in my vicinity, the drought was severe; and the milch cows in my neighborhood fall off in their milk nearly, and some quite, a half Mine were kept during the whole season without any sensible diminution which could be attributed to want of food or its quality. The cows throve, and showed no marks of discontent. None were materially sick. I lost none.

With respect to the stock, the practice upon my farm had been, from almost time immemorial, to keep from ten to fifteen head of cattle. For the support of these, about fifty acres of land were appropriated during the summer months; besides which, they were permitted to range in the autumn over the mowing. The result was, that, in good seasons, the stock throve, and were kept well.—When the seasons were dry, they fared badly.—When the drought was severe, they were shut up, and fed upon corn stalks or hay. This was the usual course. And the practice and the result is, at this day, very similar in my vicinity.

My practice, and the result of the past year, were the following:—

My stock, consisting at an average of twenty cows, were kept in their stalls through the whole year. The practice was to feed them about six times in the day, and to permit them to range in a yard, about eighty feet square, two hours in the forenoon, and two in the afternoon. They were kept well littered and well carried. While they were out of the stable, the attendant took the opportunity to clean the stalls and to supply fresh litter. During winter, they were fed as usual, with salt and fresh hay and vegetables. From June to November, inclusive, may be considered, strictly speaking, the soiling season, by which is understood that in which they are fed with green food in the house. As this is the critical period, I shall be minute in the account of my preparations and proceedings.

In the autumn preceding, I had caused rye to be sown upon an inverted sward, very thick, on about three acres. Early in April, I prepared and sowed in manner as shall be stated afterwards, about three acres and one quarter of land with Indian corn in drills. I also sowed about three acres of oats and buckwheat, broadcast at the rate of three bushels to the acre, about the latter end of the month. The whole quantity of land I thus prepared to be used in soiling, in aid of my grass, did but little exceed nine acres. Of these, that which I sowed with rye turned out so poorly, that I never soiled from it more than five days; so that, in fact, the land thus prepared did, in efficiency, but little exceed six acres.

About the 1st of June, cattle, in general, were, this season, turned out to pasture. On the 30th of May, my farmer began to cut the sides of the road leading to my house from the highway and orchard. He continued to soil from this, and from grass growing in my orchard, until the 7th. On this day he abandoned cutting the grass for soiling, and began to cut from the winter rye. This was found too tough, and it was quitted; and my farmer returned to soiling upon grass. Having cut over all the refuse of my grass by the 24th of June, he then went into the poorest of my mowing land, and afterwards into my clover. From this he continued to soil until the 6th of July. By this time, he had gone over not much short of three acres of mowing land. On the 6th of July, he began to soil from my oats. He continued to soil from these until the 21st of July. On the 21st of July, he began to soil on Indian corn, on which he continued until the 26th, when he began to cut about two acres of late and light barley. On this he continued until the 30th of July, when he recommenced soiling on corn fodder, and continued upon it until the 31st day of August. On this day began to cut over the road-sides, which had been first cut early in June. This was continued only to the 2d of September, when he began to cut the second crop of Indian corn growing upon the three and one fourth acres of Indian corn, which had now shot up in great luxuriance from the roots of that which had been cut over between the 21st and 26th of July. On this soiling continued until the 8th of September.

On the 9th and 10th, he soiled upon about a fourth of an acre of millet and buckwheat; on the 11th, soiled on a second crop of clover; from the 12th to the 15th, inclusive, on corn stalks of about an acre of sweet corn; and, on the 16th, on patch of millet and oats. This was continued to the 20th, when he began on two acres of Indian corn, sown in drills, on the 1st of August, on land from which a crop of peas had been previously taken. Soiling was continued on this corn until the 3d of October. From this time until the 15th of October, the soiling was wholly from second-crop grass, taken from various parts of my mowing-land.

From the 15th of October to about the 20th of November, they were kept wholly upon carrot and turnip tops, arising from the topping of about twelve acres of both; being allowed always one foddering of salt hay. This finished the summer feeding. From this time, they are kept wholly upon salt and English hay. The result, then, of this experiment, so far as relates to land, is the following:—

The twenty head consumed the product of

2½	acres,	road-sides and orchard.
3	"	mowing land.
3¼	"	Indian corn cut as fodder.
2	"	late and light barley.
3	"	oats.
2	"	late sown Indian corn after a pea-crop.
½	acre	buckwheat.
1	"	millet, buckwheat and oats.
17	acres.	

This is the whole land which was cut over for soiling, with the exception of the after-feed on the mowing land, and the tops of carrots and turnips. In comparing this result with the former practice of my farm, I apprehend the following statement to be just:—

I offset the keeping from the 11th of September to the 20th of November against the old manner of letting the cattle run at large during the autumn months on the mowing land, to its great injury, by poaching and close feeding. If this should not be deemed sufficient, I then make no estimate of the difference between keeping fifteen head of cattle, the old stock, and twenty head of cattle, my present stock. After these allowances and offsets (which no man can doubt are sufficiently liberal,) then I state that my experiment has resulted, in relation to land, in this, that I have kept the same amount of stock, by soiling on seventeen acres of land, which had always previously required fifty acres. The result is, in my opinion, even in this respect, greater than what is here stated. This, however, is sufficient to exhibit the greatness of the economy of this mode, so far as relates to land.

With respect to saving of fencing, the previous condition of my farm was this. I had, at the lowest estimate, five miles of interior fence (equal to sixteen hundred rods,) which, at one dollar th rod, was equal, in original cost, to sixteen hundred dollars, and annually, for repairs and rafting, cost sixty dollars. I have now not one rod rod of interior fence. Of course this saving is great, distinct, and undeniable.

Home Correspondence,

SILK CULTURE.

Sacramento, January 26th 1870.

EDITOR FARMER.

I received to day your paper of the 20th inst., containing a quotation from my letter Number 6, to the *Sacramento Union*. The quotation contained a statement of my silk business for 1868, showing a net profit of $1,000 per acre in the product of silk worm eggs. In your comments, you say this is a satisfactory showing, but you would like to have me give the result of my business for 1869. In answer I will state that in previous numbers of this series of letters also published in the *Union*, I have given that result in full, and as these letters will soon be published in pamphlet form I will send you a copy from which you can make such extracts as you may think will interest your readers. In the same letter however, from which you quoted last week were the following statements of the results of the business as experienced by other parties in 1869, and which you will see as equally satisfactory and encouraging. I presume in the multiplicity of your duties, you overlooked them or you would have given them to the public also.

Knowing your desire to do all in your power to introduce this industry, in which you have so much faith, among our farmers I send the following statements for your next issue. H. G. Ballou of Yolo, writes me as follows:—

"I obtained the foliage of a lot of two year old trees growing on the tenth of an acre of land.—The trees were uneven in growth, having been sadly neglected, yet they yielded 600 pounds of leaves. At this rate the foliage from one acre would be 6,000 pounds. From these leaves and some obtained from another source, I fed the worms from an ounce of eggs of the French variety. It took 1,500 pounds to bring them to maturity. They produced sixty ounces of eggs and twelve pounds of cocoons, after being perforated by the hatching of the moths. These, at $4 an ounce for the eggs and seventy-five cents a pound for the cocoons (export prices,) would be worth $249. At this rate the product of an acre would bring $996. This is an exceptional year—the worst ever known for the business in California. Skilled Chinese labor can be obtained for $1 per day. The cost of cultivating an acre of two-year old trees and picking and feeding the same to the worms from four ounces of eggs would not exceed $200. This would make $796 as the clear profit of one acre, the second year. The labor being light and pleasant can be participated in by the different members of a family and all completed within sixty days, leaving the balance of the year for other pursuits."

T. S. Flint, of Sacramento, fed the worms from a little less than three ounces of French eggs, picking his leaves from the trees on an acre of land. Some of the trees were four years old; most of them, however, were but two years. He produced 280 ounces of eggs and forty-eight pounds of perforated cocoons. He has sold one hundred ounces of his eggs at $6 per ounce, and is holding the balance for more. Put them at $5, the price for which they have been sold this year by me to go to Europe, and his receipts would be, for eggs, $1,400; and for cocoons, $36. Total, $1,436.—Deducting expenses of feeding—$175—and the clear profits are, from one acre of land, $1,261.—I could name many other instances where the successes of the year's operation in this business have been equally encouraging."

In the letter from which the above extracts are taken I was showing the profits of raising silk worm eggs for the European market, and I will state here that I have examined this business fully, and I am well convinced that no industry in our State promises so great a return for the same amount of labor and capital as this. I am also convinced that we can make the production of silk itself, and its manufacture, very profitable industries in our State, and it is for the accomplishment of this object that I am working, but in the mean time I propose to pick up all the dollars that come handy from the egg business—and I think Colonel, if you were in my place, you would do likewise.

Respectfully,

I. N. HOAG.

INFORMATION ABOUT CALIFORNIA.

We would suggest to many of our Eastern Journals, especially in the Rural Districts, and more particularly our Agricultural exchanges, that if they desire to enlarge the CALIFORNIA INTEREST and feeling, which is general, they can do so by giving their readers the CALIFORNIA FARMER in connection with their own paper, and thus increase their own subscription list. We will offer them liberal rates in order to give this now desired interest to the many inquirers about California in all the Eastern, Middle, and Western and Southern States. We shall be glad to club with all good Journals, on liberal terms.

Agriculture.

WHAT I KNOW OF FARMING.

BY HORACE GREELEY.

ESSAY NUMBER TWO

Necessity is the master of us all. A farmer may be as strenuous for deep plowing as I am—may firmly believe that the soil should be thoroughly broken up and pulverized to the depth of fifteen to thirty inches according to the crop; but, if all the team he can muster is a yoke of thin, light steers, or a span of old spavined horses, which have not even a speaking acquaintance with grain, what shall he do? So he may heartily wish he had a thousand loads of barnyard manure, and know how to make a good use of every ounce of it; but, if he has it not, and is not able to buy it, he can't always afford to forbear sowing and planting, and so, because he cannot secure great crops, do without any crops at all. If he does the best he can, what better can he do?

Again: Many farmers have fields that must await the pleasure of Nature to fit them for thorough cultivation. Here is a field—sometimes a whole farm—which, if partially divested of the primitive forest, is still thickly dotted with obstinate stumps and filled with green, tenacious roots, which could only be removed at a heavy, perhaps ruinous, cost. A rich man might order them all dug out in a month, and see his order fully obeyed; but, except to clear a spot for garden or under very peculiar circumstances, it would not pay; and a poor man cannot afford to incur a heavy expense merely for appearance's sake, or to make a theatical display of energy. In the great majority of cases, he who farms for a living can't afford to pull green stumps, but must put his newly cleared land into grass at the earliest day, mow the smoother and pasture the rougher portion of it, and wait for rain and drouth, heat and frost, to rot his stumps until they can easily be pulled or burned out as they stand.

So with regard to a process I detest, known as Pasturing. I do firmly believe that the time is at hand when nearly all the food of cattle will, in our Eastern and Middle States, be cut and fed to them—that we can't afford much longer, even if we can at present, to let them roam at will over hill and dale, through meadow and forest, biting off the better plants and letting the worse go to seed; often poaching up the soft, wet soil, especially in Spring, so that their hoofs destroy as much as they eat; nipping and often killing in their infancy the finest trees, such as the Sugar Maple, and leaving only such as Hemlock, Red Oak, Beech, etc., to attain maturity. Our race generally emerged from savageism and squalor into industry, comfort and thrift, through the Pastoral condition—the herding, taming, rearing and training of animals being that department of husbandry to which barbarians are most easily attracted; hence we cling to Pasturing long after the reason for it has vanished. The radical, incurable vice of Pasturing—that of devouring the better plants and leaving the worse to form and diffuse seed—can never be wholly obviated; and I deem it safe to estimate that almost any farm will carry twice as much stock if their food be mainly cut and fed to them as it will if they are required to pick it up where and as it grows or grow. I am sure that the general adoption of Soiling instead of Pasturing will add immensely to the annual product, to the wealth, and to the population, of our older States. And yet, I know right well that many farms are now so rough and otherwise so unsuited to Soiling as to preclude its adoption thereon for many years to come.

Let me indicate what I mean by Good Farming, through an illustration drawn from the Great West:

All over the settled portions of the Valley of the Upper Mississippi and the Missouri there are large and small herds of cattle, that are provided with little or no shelter. The lee of a fence or stack, the partial protection of a young and leafless wood they may chance to enjoy; but that it is a ruinous waste to leave them a prey to biting frosts and piercing northwesters, their owners seem not to comprehend. Many farmers far above want will this Winter feed out fields of Corn and stacks of of Hay to herds of cattle that will not be one pound heavier on the 1st of next May than they were on the 1st of last December—who will have required that fodder merely to preserve their vitality and escape freezing to death. It has mainly been employed as fuel rather than as nourishment, and has served, not to put on flesh, but to keep out frost.

Now I am familiar with the excuses for this waste, but they do not satisfy me. The poorest pioneer might have built for his one cow a rude shelter of stakes and poles, and straw or prairie grass, if he had realized its importance, simply in the light of economy. He who has many cattle is rarely without both straw and timber, and might shelter his stock abundantly if he only would.—Nay: he could not have neglected or omitted it if he had clearly understood that his cattle must somehow be supplied with heat, and that he can far cheaper warm them from without than from within.

The broad, general, unquestionable truths on which I insist in behalf of Good Farming are these; and I do not admit that they are subject to exception:

I. It is very rarely impracticable to grow good crops, if you are willing to work for them. If your land is too poor to grow Wheat or Corn, and you are not yet able to enrich it, sow Rye or Buckwheat; if you cannot coax it to grow a good crop of anything, let it alone: and, if you cannot run away from it work out by the day or the month for your more fortunate neighbors. The time and means squandered in trying to grow crops where only half or quarter crops can be made, constitute the heaviest item on the wrong side of our farmers' balance-sheet; taxing them more than their National State, and local Governments together do.

II. Good crops rarely fail to yield a profit to the grower. I know there are exceptions, but they are very few. Keep your eye on the farmer who almost uniformly has great Grass, good Wheat, heavy Corn, etc., and, unless he drinks, or has some other bad habit, you will find him growing rich. I am confident that white blackbirds are nearly as abundant as farmers who have become poor while usually growing good crops.

III. The fairest single test of Good Farming is the increasing productiveness of the soil. That farm which averaged twenty bushels of Grain to the acre twenty years ago, twenty-five bushels ten years ago, and will measure up thirty bushels to the acre from this year's crop, has been and is in good hands. I know no other touchstone of Farming so unerring as that of the increase or decrease from year to year of its aggregate product. If you would convince me that X. is a good farmer, do not tell me of some great crop he has just grown, but show me that his crop has regularly increased from year to year, and I am satisfied.

—I shall have more to say on these points as I proceed. It suffices for the present if I have clearly indicated what I mean by Good and what by Bad Farming.

CARE, WARMTH, AND FOOD OF SHEEP.

We boast of being an excellent climate for sheep raising, and it is true, but good as our climate may be the sheep raisers as a body have not shown that they are good and careful sheep raisers, or good wool growers, for while the number of sheep have increased by nearly one million, the wool has not increased in due proportion, for by the most carefully prepared statistics we find the number of sheep in 1868 to have been about 2,250,00, and at the present time 3,000,000.

The entire wool product of the State in 1867, was short of nine million pounds. In 1868 it had increased to 13,000,000 lbs, an increase of about 50 per cent, but in 1869 the entire crop was only 15,500 000 lbs, an increase of only 20 per cent, when it would have been with judicious management 50 per cent, and this we esteem arises from the fact we have stated of the system of short grazing.

We venture the opinion that upon careful examination, it will be found to result from too little food, and neglect in cold and wet weather. We think many persons who raise sheep have been in the habit of herding too many upon a given number of acres, and thus food runs short. A fair estimate is where the food is ordinary grass or clover, in our estimate *three sheep to an acre* is all that can be sustained. More than that will result in loss in wool or mutton, but if sheep men would but select land that is suitable, and grow Alfalfa, *ten sheep* could be sustained on an acre, and more wool and better mutton, and greater profit to the raiser, would be the result.

We have the testimony of wool men at the East, and in Europe, who appreciate our advantages, and wonder at the oversight of many who are sheep raisers, who do not act with more wisdom in this matter where a better care would put more money in the treasury.

GRAPES ABOUT ROCKS.

The past season was a very peculiar one—wet and cold; and the grapes in many localities in the East failed to ripen. While this was generally true, it was rather refreshing to observe at one of our Horticultural exhibitions, splendid specimens of a well known variety, apparently fully ripe, which we found on inquiry has been growing near a ledge of rocks. Some years ago we visited a place where we observed similar results from a similar cause. The whole secret of the thing is that the rocks absorb the heat of the sun by day, and give it off by night; keeping the roots of the vine warm, and the temperature about it more fully equalized.

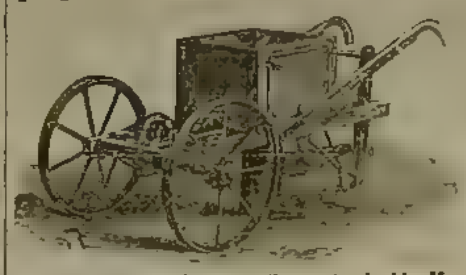
Our attention was at once attracted to this same subject by observing that the melon vine in a hill around which some stones had been placed were much larger at the end of a few weeks than those in the hills that had not been so treated. The same principle is observed in cities, where grape-vines are trained in front of brick walls, which absorb the heat by day, and reflect it when most needed by the vine. We propose to test more fully the value of such treatment for the vine, by placing stones about the roots of several bearing vines, in different parts of the vineyard where they failed this year to ripen a single grape.

We clip the above from the *American Journal of Horticulture* of Boston, and would remark that the same results we have noticed for many years.

The constant readers of the FARMER will remember our description of the Vineyards of Dr. L. E. Miller of Rattlesnake Bar, some ten years since, and several other Vineyards near by, where, at our own suggestion, the grape was planted around great boulders, upon very rocky lands, so that the vines could run over the rocks and cover them. The result was a most prosperous Vineyard, an immense and healthy growth, and a good crop of grapes. This will always be the result, as the rocks gather the heat by day and give it back by night, thus keeping an even temperature to the roots of the vine. Let those who have wild, rocky, mountain land, try this plan, and they will hide the rocks and win a large crop of Grapes.

Voltair's saying, in answer to a stranger who was observing how tall his trees grew, "that they had nothing else to do," was a quaint mixture of wit and humor.

TRUE'S
IMPROVED
POTATO PLANTER.



This is, undoubtedly, one of the most valuable Machines adapted to Agricultural purposes ever introduced.

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such sized slices as the farmer may prefer; drops these pieces with the most perfect regularity, and covers them perfectly, and does all this as fast as a horse can walk over any ground that can be plowed

No intelligent farmer can fail to see that an implement with which one man can, with the aid of a horse plant six acres of potatos in a day, is of incalculable value; because the days in which PLANTING can properly be done are very few, while he has all SUMMER and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attending to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune with it

Particulars and Catalogues can be had at our office.

320 Clay street, up stairs.

OIL CAKE MEAL!

THE BEST FEE KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal, and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent, Barley Meal, 13 per cent; Oat Meal, 18 per cent; Oil Cake Meal, 22 2-100 per cent. For life-sustaining properties to all stock are considered to sudden changes of weather or over-driving it has an equal

For MILCH COWS particularly valuable, increasing the quantity of milk and improving its quality to a far greater extent than any feed known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food, generally mixed with the mash of bran, slops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($25 per ton,) it is the cheapest feed in market. It is now selling in New York at $42 per ton, gold, at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Food Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

PACIFIC OIL & LEAD WORKS,
NOS 3 AND 5 FRON STREET,
3216 San Francisco.

Fine Wool Sheep

3000
VERY SUPERIOR

Advertising Abroad!

WE CALL THE SPECIAL ATTENTION OF ALL Manufacturers, Agricultural Men, Nurserymen, Booksellers, and others having interests connected with the PACIFIC COAST, that now is the time to secure the business of this region by wisely ADVERTISING WITH US.

The full effects of the completion of that Grandest of all HUMAN ENTERPRISES, the PACIFIC RAILROAD, must open a large and wonderfully increased business between the Eastern States and the Pacific Coast, and they who wisely ADVERTISE NOW, will be the FIRST TO SECURE IT, and when once secured, they can HOLD ON TO IT.

We therefore invite all those who have valuable IMPLEMENTS, MANUFACTURES, INVENTIONS, BOOKS PAINTINGS, etc. to the Columns of the CALIFORNIA FARMER, that will give them a wider circulation than any other medium they can adopt.

WARREN & CO., Eds. and Prop'rs.

Horticulture.

CULTIVATION OF STRAWBERRIES.

SITUATION.

A warm, exposed, and yet rather moist location is the best for a Strawberry plantation.

If very early fruit be an object, select a side-hill gently sloping towards the South, with a liberal admixture of small stones or coarse gravel in the soil. This should then be protected on the North, West and East by a high closed board fence, or a live hedge, in order to be very early; we have seen an artificial hedge of withered evergreen boughs that had answered an excellent purpose, and enabled the owner to realize fifty cents per quart for the crop, when otherwise he could not have so much anticipated the usual season, and would have been compelled to take twelve and a half cents for the same fruit.

If late fruit be desired, then select a piece of land facing the North, and exposed. Low land is usually preferable to high hilly land for the Strawberry, yet it can easily be raised on both; a little knowledge of its character will enable us to remedy the defects of the high ground. If the situation is near a spring of water, where it can be irrigated, and is also susceptible of drainage, it is very desirable.

Though they will sometimes succeed when partially shaded with trees and shrubbery, yet they are best flavored in an open garden, with no shade but their leaves. Alpines, and some other kinds, planted in the northern shade of a fence or dwelling, will commence later and continue longer in their bearing season.

SELECTION OF SOIL.

New land, recently disrobed of its forest, if of a deep gravelly loam, we think is the *best* adapted to the Strawberry, and next, a sandy loam; but almost any soil, even the heaviest clay, can be prepared, by a liberal admixture of sand or gravel, so as to produce the finest quality and a large crop of fruit.

As has been intimated, as low, soft, moist, cool soil as can be procured, consistently with *depth* and *thorough drainage*, is best adapted to the Strawberry; and yet elevated knolls, and even sand-hills, with the precautions above-named, have often succeeded well.

Wet, spongy lands, except with a porous subsoil susceptible of drainage; and high, barren hills, with a thin, flinty soil, are alike to be avoided.

The Strawberry, however, is so retentive of life, that it will live in almost any soil; but it will not produce much fruit, unless the remedies are in some way applied to the ungenial soils.

ORDER IN THE ORCHARD.

In a well ordered fruit garden, every kind of fruit should have its department, and instead of seeing, as in Kent, a row of trees of all sorts, mixed in the most heterogeneous manner, no mixture of species should be allowed; every kind should have its allotment—apples on the Paradise stock, ditto on the crab stock, pears on the quince stock, the same on the pear stock. Morello cherries as pyramids on the Mahaleb stock—the best of all methods for their culture—and the various kinds of Duke cherries on the same kind of stock. Heart and Bigarreau cherries on the common cherry stock, plums as bushes, pyramids, or half-standards should all be separated, and not planted higgledy-piggledy, as they have been and are now. The sound-headed market-gardener will, when his mind is turned to improved fruit-tree culture, see all this, and make his fruit garden a pattern of order.

A very good light permanent label for pyramidal and other fruit trees, is a small piece of zinc, painted with white-lead paint, and written on while moist with a strong black-lead pencil. It should be suspended from the side branch of the tree (not the stem) by a piece of stout copper wire.

Cherry trees are often infested in summer with the black aphis. The best remedy is a mixture made by boiling four ounces of quassi chips in a gallon of soft water ten minutes, and dissolving in it as it cools four ounces of soft soap. It should be stirred, and the trees syringed with it twice or thrice. The day following, they should be syringed with pure water.

In moist retentive soils, the fruit-spurs of small trees become covered with moss; some powdered lime sprinkled over them will destroy it; this is best done in foggy weather in winter.

A BEAUTIFUL HOUSE, IN PIECES.

The Chicago papers are jubilant over a palatial residence just completed in their city, constructed of 24 different kinds of wood, as follows: White ash, black ash, Hungarian ash, white cedar, red Florida cedar, chestnut, cherry, beech, yellow birch, white birch, butternut, Balm of Gilead, ebony, red elm, balsam, fir, holly, hemlock, American linden, sugar maple, soft maple, two kinds of mahogany, white and red oak, white and yellow poplar, Norway pine, white pine, satin wood, sumac, sycamore, spruce, black and sweet walnut.

Yet for all this boasting, our California laurel is more beautiful than any other wood named.

ORANGE SEED.

SMALL FRUIT RECORDER AND COTTAGE GARDENER.

A MONTHLY PAPER

AT ONLY

50 CENTS PER YEAR.

Devoted solely to small Fruits, and Vegetable and Home's Adornment. The Editor has had a lifetime of PRACTICAL experience, and now has 2000 acres devoted to SMALL FRUITS. He takes or exchanges for every agricultural and horticultural paper printed in the United States and Canada, and extracts from each, all PRACTICAL matter pertaining to these interesting subjects, that readers of this paper get the CREAM of all these publications. A practical story entitled "EXPECTATIONS REALIZED" will begin in the January number, telling how a person first grew fruits for his family use, and then supplied his village market, and finally worked into a very extensive and profitable business; also the Editor's "*Rambles and Jottings over the Fruit-Farm.*" Besides correspondence from all parts of the United States and Canada from practical fruit growers and flower fanciers.

Splendid inducements offered to those getting up clubs, for particulars send stamp for our beautiful and attractive show bill and "Club Circular." Sample copies of Recorder sent with show bill. Address A. M. PURDY, Palmyra, N. Y.

The show bill is exceedingly beautiful and well worth examination.

BOUND VOLUMES FARMER

☞ Volumes of the "California Farmer" for The last EIGHT YEARS, uniformly bound, can be had at the Farmer Office at $8 per Volume.

These Eight Volumes contain more useful matter touching the practical workings of Agriculture as adapted to California Culture than any Book or Books Extant, as they comprise hundreds of Experiments, Letters and Essays upon the Culture of Cotton, Rice, Coffee and Tobacco; Grapes, Strawberries, and all other Fruits, with the Culture of Hops, Castor Beans, Flax, Hemp, &c. and the Whole series of Essays of L. Prevost on Silk Culture, from early beginning.

This set of Volumes would be a Library of itself and is valuable to the Cultivator of the Soil.

Orders sent to Farmer Office will be promptly attended to

VALUABLE PLANTS FOR SALE.

☞ Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and to so cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, to gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us. WARREN & CO.,

REASONS WHY EVERY FARMER AND STOCK-RAISER SHOULD TAKE THE "CALIFORNIA FARMER."

1st. Every Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State

2d. Every such person should give his sanction and support, generously and voluntarily to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefitted* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and the Stock-raiser will always be better advised of the markets, and that kind of information so important to his interests by constant access to a Home Journal.

6th. The *California Farmer* has faithfully advocated the best interests of the Farmer and Stock-raiser for sixteen years steadily and is the *only Agricultural Journal in California*,

7th. The *California Farmer* contains the most important information relative to these interests in every branch of Agricultural science.

8th. The *California Farmer* contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The *California Farmer* contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Agriculture,

10th. The *California Farmer* is now the *only paper* on the Pacific Coast that is continued by its *original Editor and proprietor*, commencing at the time this Journal commenced; and having been constant in its efforts for the good of these interests, deserves the cheerful patronage of all engaged in industrial pursuits, and of all good men.

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING.....JAN. 27, 1870.

THE CALIFORNIA FARMER READING ROOM, AND MUSEUM OF NATURAL HISTORY.

220 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER OFFICE are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING.

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion, twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SAMPLE COPIES.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination hoping our paper will meet their approval and induce them to subscribe, and to ask their neighbors to subscribe also.

Send for Sample Papers and get up a club. Address

Editor's Chair.

TO CORRESPONDENTS.

We are always most happy to receive communications from correspondents, upon all matters connected with "Agriculture," "Rural Affairs," "Education," "Laws of Health," &c., and all the request we make is that the matter be upon *one side* only of the paper, and the real name of the writer to be made known to us.

Our columns are devoted to all subjects that aim to promote Human Happiness and Prosperity.

HORACE GREELEY'S ESSAYS.

We know we are doing a good service when we lay before our Farmers the excellent Essays of Hon Horace Greeley, from the "Tribune." Every Farmer should read them carefully.

MAGNETIC INFLUENCE.

We give a very important Essay from the "Laws of Life" on this subject, this week. Everybody read it

We call attention to the decline in the Wheat market, which we copy from the "Commercial Herald

BATHING.

We ask attention to this matter on the 15th page.

Dr. Zelle's Bathing Establishment is one of the best and most complete in the United States, and our people should go and see for themselves.

SMALL FRUITS.

We have prepared for next week full directions for planting all kinds of Small Fruits, and now is the time to prepare for this work, now that the Sun has warmed up the soil.

OUR EUROPEAN LETTERS.

We have our European letters for our next number, and several other valuable letters from esteemed correspondents.

"TRAIN" EXTRA.

A copy of the publication of *Rev. Geo. Francis Train* came to us. We shall *muster* him to duty next week.

We return thanks to C. E. L. for valuable letter and parcel received. Shall use the matter in our next.

STRAWBERRY CULTURE,

In our Horticultural columns, from Pardee's work, should be read.

SAN JOSE AND IMPROVEMENTS,

In type for our next issue.

POSTPONED MATTER.

With a desire to get the long articles in our paper this week before our readers, some statistical matters (always dry, however important,) are laid over.

OUR AGENCY—NEW SAN DIEGO.

We hereby appoint W. B. Bancroft, Bookseller at New San Diego, our agent for all that region of rich country now rapidly filling up with a Rural population.

We invite the cultivators of the soil to call at the Bookstore of Mr. Bancroft and examine THE CALIFORNIA FARMER, which they will find a great aid to them in their agricultural pursuits.

We are also glad to recommend this Bookstore to their special attention, where they can always have their minds improved with good books, and all their wants in the Stationary line supplied also.

THE POTATOE PLANTER.

We call the special attention of all who plant Potatoes largely, to the far famed POTATOE PLANTER now on Exhibition at our Reading Rooms.

Persons who plant any number of acres of Potatoes should by all means see this great labor saving machine, as its great excellence would convince them at once of its utility and economy. For particulars of its merits, see the advertisement in our columns.

GOOD SUBJECTS FOR LEGISLATION

Our Legislators are or should be the Trustees and Gardians of our State Interests, and our States Honor, both abroad and at home, for it is a well established fact that those States or Nations that are best governed always show evidence of the greatest prosperity, and thus draw to them the best and most industrious population of other States and Nations on the same principle that Theives, Robbers, and Murderers rush to a place where they feel they have the greatest chance of escape under a loose or *bad* government.

With this truth before us how should a Legislator feel and act when he must know his *acts* as a Legislator must by their influence work forever for the weal or woe of the people who invested him with so sacred a trust. California now occupies a very conspicious position before the world, and her name, fame and interests are greatly affecting the business relations of almost every other section of the world, for all the world is in intercourse with us, and we must more or less affect them.

IMIGNATION, PAUPERISM.

This is a very important subject, and should be wisely handled, for if our State should lay large plans, and expend large sumes of money to induce an increase in our population of the working class how would it look when the whole press is teeming with stories of hundreds and thousands of our own population already here, who have families, who now by reason of the general depression in business are absolutely in a suffering condition—out of *employment*, out of *means*, and almost out of Hope at the prospect before them

Legislators should pause before they vote money to bring *more* population here, they should see that our own people are provided with labor, so that they can earn bread for their families.

We know of what we speak, for in all our *twenty years experience* in California, we have never known so many laborers, both men and women, out of employ, and those too who need help at this very hour.

Our Legislators we trust will first provide for those who are already here, of our own people, before they vote money to bring the Paupers and destitute of other countries here to add to the present load of suffering, or to give offices to men who are too lazy to work.

MANUFACTURES AND MECHANIC ARTS.

Wise legislation is that which reaches out the States strong arm, and opens its well filled purse to aid the skilful manufacturer, and the ingenious Mechanic, and when aid is thus given, it fills the mouths of women and children and clothes them while the Husbands and Fathers are laying the corner stones of a prosperous State.

Legislate then we say wisely, for *New manufactures, New inventions*, and keep manufactories going and workshops busy with an industrious population, give work to those that *will work*, and COMPEL the idle to labor, or send them out of the State.—This kind of Legislation will empty Jails and Prisons, stop crime, and give peace and prosperity to any people, no other legislation is wise or Patriotic, none other is Right.

THE YOSEMITE VALLEY.

The Great Yosemite Valley and the Grand and Beautiful Pictures painted there by the *finger* of God, are the property of the STATE OF CALIFORNIA, property donated by the General Government to our State, and that spot, not an acre, nor a *foot* of it, ever should be sold, transferred, or alienated from the people of California, but should remain forever, and sacred as a priceless inheritance.

Messrs. Hutchings and Lamon have undoubtedly made many improvements upon those portions of the grounds occupied by them. Mr. Lamon is an old settler there, and Mr. Hutchings has been there several years. There may be others also, and each and all have done much to improve this wild and far away Eden spot of our State, and they have labored in good faith that they were making themselves "Homes" for their natural life. Yet for all this, the Yosemite Valley is too sacred a spot, as connected with the History of our State, to be other than the property of the State, and thus cared for and guarded, and transmitted to the latest ages as

THE YOSEMITE VALLEY OF CALIFORNIA.

It was our good fortune to have been one of the few that visited that Valley at its first opening in 1856, and was conducted thither by the MANN BROTHERS who opened the first trail. We remember the Valley and the impressions made upon us as we stood upon "Inspiration Rock" and looked down into that Valley—that scene has never left our memory. Twice since we have visited the Valley, have *traveled* over it for days and days, and therefore can appreciate its value, and we trust it will ever remain a treasure beyond price to our State.

While we thus speak of Yosemite Valley we are for justice to those who feel they have a claim for a portion of the land there; and even if such claims were based on any hope of a great future sale by reason of their value, still we would have a fair, a liberal, nay a large and generous price paid to these claimants, enough to satisfy all their ambition, but never! never! have any sale or transfer made of that spot which is indeed, in the best sense of the word,

A HOLY SPOT.

We trust the Legislature of our State, and our Congress, will ever keep it so.

SEND US SAMPLES.

We desire to procure *Samples* of every variety of Grain, Grass, and every Cereal, as well as *Samples of New Products*, and for these we shall be ready to reciprocate in any way desired. We will pay for them, or bestow a full equivalent in some *new Seed or Plants* that may be desired.

We desire specimens in Natural History, Insects, Flies, Frogs, Toads, Snakes, Turtles, &c., preserved in spirits, or dried, and for these, or any curiosity, will make due return. Send by Wells, Fargo & Co. to our Office.

SILK AND SILK WORMS.

It will be recollected that we published last week some data of the profits of this business as reported to the Sacramento *Union*, by I. N. Hoag Esq., of Sacramento, the statement of Mr. Hoag was highly favorable to him for his business of 1868, we desired him however to give us his business for the year of 1869, as last year was not a favorable one for our Silk culturist. Mr. Hoag's letter is now published, that speaks for itself.

In order that we might establish assurance that the sale of the eggs alluded to by Mr. Hoag, to Messrs Hentsch and Berton, Bankers, would establish *future* and profitable sales also, we called on Mr. Berton and learned from him the result of that large purchase and shipment by them.

Messrs Hentsch and Berton have always been ready to aid this enterprize in every way possible with a most comendable public spirit and then in this early day came forward readily and purchased these first cocoons raised here by Mr. Hoag amounting to about $2000, and sent them abroad, now what was the result to them? Mr. Berton very kindly opens his Leger to us and showed the true result to their House, which was an actual loss of ONE THOUSAND DOLLARS.

Now with this fact before us we are in duty bound to say that all growers of the Mulberry and raiser of the worm and egg, must go carefully and wisely to work, and with good industry and perseverance, success will result. But it will not do to calculate that men as liberal as Messrs Hentsch and Berton always have been, will take all the eggs and venture a loss of $1000 on every lot.

We ourselves have no doubt of eventual success, but laborers had better depend upon their own skill, industry and labor, than upon great bounties, or great speculations.

NEVER PLOW WET SOIL.

We have often urged the attention of the Farmers to this subject, as one of great importance. Any traveler among our farming districts can see large tracts of land that have been plowed when wet and unfit to be worked, by observing large heavy clods of earth, which, in the hot season, become like a heated brick burning all the roots of grain or other product near to it. Besides this evil, no seed can vegetate and grow well upon soil thus cultivated, nor can that soil give back as much nutrition as if plowed when in right condition and upon a warm and sunny day when light and warmth can penetrate into the soil and thus greatly benefit it.

We are confident that farmers lose from *ten to forty per cent* of their crop by inattention to this matter. By a little care at the proper time to plow, by examining the soil and selecting good *sunny days*, the soil will send up its voice in a halo of dewdrop clouds that will wreathe the plowmen with its approval of his good sense.

As with Farms so with Orchards, Vineyards, and Gardens. *No soil* should be worked when wet and soggy. If the soil continues wet long drain it well and soon it will be in working order, but never attempt to plow, spade, or work it, unless in good condition.

MARKET ABUSES.

We invite the attention of all our Fruit growers and Market gardners to the subject of *sales* of Produce in the New York Markets, as reported in the *Farmer* this week in the discussion of the "American Institute Farmers Club," this is a matter of great moment to our producers now, for the *same evil is here*. We *know* what we say, and have all the evidence we need to show that our producers are subject to heavy losses by the system, and it is their first duty before another season opens to take measures to correct the evil.

This can only be done by a union among all the growers, first forming Farmers Clubs, in each County and a head at the centre here in our City, and the growers would realize 25, 50, and 100 per cent more for a large amount of their produce

Is not this matter worth looking into, those that feel it so, if they will confer with us *we will show them the way to success*.

IMPORTANT ENTERPRIZES.

Among the many and very Important Enterprizes now as it were, just budding into promised usefulness, we can name the Manufacture of Silk Goods. In this work the Neuman Brothers are Pioneering their way bravely on.

The Beet Sugar Enterprize at Sacramento which has now begun in earnest, and from simple experiments enough has been shown, to warrant a still greater energy and more capital being engaged in this manufacture.

Both these Enterprizes will greatly prosper if they are but wisely conducted, and to these enterprizes our Legislature should give generous encouragement.

STREET SWEEPINGS AND NIGHT MANURES.

If our *City Authorities* would look to the subject of Night Manures and Street Sweepings, they could, as Boston has done, make them a source of large income.

The value of the night soil and street sweepings now thrown into the sea, and used to fill streets, could be made to pay in tens of thousands of Dollars annually.

Why will not our City authorities employ prisoners and idle loafers—get them at work—(make them work or quit the City)—and keep our City clean. This business of saving the sweepings can be made profitable to our City.

By present appearances San Francisco is to be assessed from 40 to $100,000 for cleaning streets, when the very material from our streets, and the night soil, should be a large income instead of an expense.

ADVERTISERS GAZETTE.

G. P. Rowell &c., Advertising Agents, N. Y., issue a very valuable monthly containing *Newspaper histories* of value to all publishers.

THE EMPORIUM CITY.

As many persons in the country do not know how rapidly our city is improving, nor can they have a just idea of its extent, magnitude, wealth, population, and influence, we give them a glimpse of it now, by a synopsis from that most excellent Directory of our City, just issued by our most excellent Directory maker, Henry Langley, Esq. From the present issue kindly sent us, is given this data, which we are glad to scatter broadcast:

The population of San Francisco, September, 1869, 172,050, was as follows: White males over 21, 59,500; white females, over 18 years, 34,300; white males and females under 18 years, 53,000; males, names refused, and foreigners, 4,000; Chinese, 9,200; colored, 2,850; floating population, 9,000. The total population as estimated in the Directory for 1868 was 147,950—showing a gain in one year of 24,300 An increase at the same rate for the ensuing year, will swell our population by September, 1870, to nearly 200,000.

The total number of buildings in the city is 18,659, and of these, 850 were erected during the year past. The value of such improvements for the year ending June 30, 1869, was upwards of $9,000,000; and the cost of street improvements, in addition, was $1,600,000.

The value of real and personal property in the city returned the last fiscal year $106,414,020.

Current expenses of the last fiscal year, $1,937,925; interest charges, $148,333; total, $2,459,210. From this deduct the sums received for fees, etc., $386,117 81, leaving $5,073,092 24, exclusive of street expenses.

The total bounded debt of San Francisco, June 30, 1859, was $4,7909,100, bearing interest at from 6 to 7 per cent per annum. The amount in the sinking fund for the redemption of bonds, July 1, 1869, was $1,299,034 40, of which $1,235,815 57 is to be applied to the 10 per cent. bonds due in 1871. The sinking fund reduces the debt to $3,410,865 60.

San Francisco now stands the tenth city in the United States in point of population, and will in ten years rank much higher.

DECLINE IN THE WHEAT MARKET.

The decline in Wheat at Liverpool, coupled with reduced purchasing limits, operates prejudicially to the California farmer now holding over his grain. Even the serious decline in freights, and the superabundance of unemployed tonnage, are insufficient to warrant Wheat-buyers in keeping the price at rates current at the close of the year. The quantity of Wheat yet remaining in the State, and that to be received from Oregon, is considerable, and will doubtless find its way to tide-water within the next four months, though at this date many large grain depots are inaccessible by reason of the low stage of water in the rivulets connecting with the navigable waters of the interior. A week since, the rivers began to rise, and preparations were made to dispatch steamers of light draught for the removal of the large grain accumulations inland. Two or more steamers from Stockton were dispatched for the purpose, but they were only partially successful in securing cargoes, owing to the rapid falling of the streams, thus compelling them to abandon the business for the present.

The *Oregon Herald*, in alluding to our remarks about the damaged Wheat received from that State, says: "The rains after harvest no doubt did considerable damage to grain in stack, but not to the extent the remarks of the *Commercial Herald* might lead any one to suppose. From the best information we can obtain, the amount of the crops damaged throughout the State would not foot up to one-fourth. But still it is for the interests of Oregonians not to suffer anything to tarnish the fair fame we have already gained abroad for our superior brands of Flour and Grain. Therefore, it were better to feed the damaged grain to stock than to export it to a foreign market, where it would only work an injury to our reputation. Our brands of Flour have established a good reputation in Eastern cities, and supplies are constantly called for; therefore, it behooves us to do everything in our power to enhance rather than diminish that reputation." We are glad to see that our Northern friends are awake to the importance of sustaining the good reputation already secured for their Breadstuffs, both here and in the Atlantic cities. We certainly wish them all the prosperity they merit.

At this date our millers are but partially occupied, running only by daylight. They are therefore disinclined to buy Wheat in advance of their milling wants, not seeing in the near future any market opened for their flour at prices that will save them from loss. Last year's milling business was by no means lucrative to the leading city millers of this coast, chiefly by reason of the inferior quality of the Wheat ground, and the very low prices ruling for their offal. We hope the year upon which we have entered may prove far more profitable to this branch of our home industries than that of 1869.—[Commercial Herald.

OUR EXCHANGES

By the notice we gave some time since that we could not enlarge our *list of Exchanges*, except to Journals of same interest, or those of value, we hereby give notice that those Journals that do not receive the FARMER after our *Number Two*, will please understand that however much we may regret to refuse the Exchange, it arises from our utter inability to do so, for our applications for Exchange has reached the number of nearly *One Thousand*. This will show our cause of refusal. Those that receive No. 2 and 3 will remain permanent Exchanges.

CAREFUL DIRECTIONS.

We would most particularly desire our correspondents to be very careful in sending their Letters, Orders and Remittances to us, as there are several firms of Warren & Co., and unless the address is very plainly marked, mistakes will arise.

All Letters, Orders, Parcels, &c., intended for this office should be addressed

WARREN & CO.,
California Farmer Office.

Eastern Correspondence.

New York, January 12th, 1870.

COL. WARREN.

Editor of the California Farmer.

I send you below two articles published in the *Glasgow Weekly Mail*, (Scotland,) entitled "Street Cars," and "Sleeping Cars," being extracts from "Arthur Sketchley's Impressions of America." The casual reader cannot fail to see that this Mr. Sketchley is a prejudiced foreigner, who, having made a short and hurried tour on our Atlantic coast, hastens, on his arrival on British soil, to write a book, calculated to deceive and mislead our English cousins, on the idea of American Institutions. Some of his statements are utterly devoid of truth, while others might with allowance, pass muster. It is quite evident his experience in traveling in sleeping cars has been limited, and the discomforts arrising from hunger and thirst while passing through New England, where the Main liquor law is in force, is more fancied than real. Having lately made a tour through that part of New England where the liquor law is generally supposed to be rigorously enforced, I had an opportunity of witnessing an incident, showing a feature of its practical working.

Standing one day in the office of one of the principal Hotels, on Washington street, Boston, I observed a stranger approach the bar and call for a drink. The attentive bar-keeper prepared the ice water, diluting the same with a suspicious colored fluid, which I made out to be the forbidden "fruit." The stranger was then invited *behind* the bar to taste his nectar, which office he seemed well capable of doing. The law forbids that bar-keepers from selling liquor *over* his bar, and in selling *behind* the bar, the law was not violated.

But little difficulty is experienced by dram drinkers in any part of the City in getting their favorite glass behind the bar. But I am losing sight of our *friend* Arthur. The only way he can correct the wrong impressions he has made, is to do as Charles Dickens has done—come over and try it again, and, if he is compelled to devote his time and travels to any one locality, and, at the same time, desires to receive correct impressions of American Institutions, he need not go beyond the borders of that good old New England State of Massachusetts.

The *Glasgow (Scotland) Weekly Mail*, quoting Sketchley's Impressions, thus enlightens its readers upon American

STREET CARS.

They are very large, and have an entrance at either end, and are constructed so that the horses are detached from one and attached to the other which obviates the necessity of turning them on arriving at their places of destination, a process that in some cases would be impossible. They are lighted at night with lamps, in which camphine is burned. They are drawn by three wretched looking horses, and have a driver and conductor in strict keeping with the cattle. During the journey the driver collects his fare—no easy task at times, when the car, which is intended to hold four-and-twenty persons, is occupied by forty or fifty passengers—for such is the nations determination that every one shall be first, the men women, and children crowd into them regardless of space or the demands for it which the human form may put forth; in fact, it is more like transporting cattle than conveying human beings. Men and women are huddled up in a manner that is disgusting, to say nothing of the chances thereby afforded to pickpockets. These cars, like crocodiles, have a difficulty in turning, and the bumps and thumps one gets in them are really formidable. The natives cling on to them behind and before like a swarm of bees, and jump on and off while they are in motion, being frequently killed in the process. Gangs of thieves enter them at night, and, if disappointed of finding a lonely passenger worthy of their affections, have been known to murder the conductor, either from disappointment or because he demanded his fee.—Cars have the monopoly of the streets through which they pass, and render them both disagreeable and dangerous to all other vehicles.

SLEEPING CARS.

If ever there was a purgatorial situation in this world, it is a long winter night passed in one of those would be luxurious carriages. On entering it you are nearly stifled with heat, and as soon as the train is in motion you become aware that sleeping is out of the question. The oscillation of the train, the noise it makes, to say nothing of the snores of those around you, keep you partially awake, and then the sense of suffocation is overpowering; you fight for air with the window, but either you cannot open it, or are compelled by the intense cold to close it again immediately. If you are so fortunate as to obtain a section of the carriage to yourself it is better, because you then occupy the space of the upper and lower berths; but if you are compelled to take what you can get, and there is only one place to be had, then is your cup of misery filled up indeed. Your opposite and upper neighbors both expectorate upon the floor, so that if you drop your handkerchief you dare not attempt to pick it up. There you are till daylight doth appear, and then you wish to wash your hands and face; but the water is exhausted and the towels used. You change cars early in the morning and pursue your journey to Rutland, where you dine, and of course are driven by hunger's pangs to do so; there is nothing to drink but cold water, with the alternative of drinking it warm discolored by some filth called tea.—The Main liquor law is in full working here, and as it is the law one submits; but why does not the enactment extend to tea, or the stuff so called in this country? for, as the Immortal Tom Hood says, "If wine is poison, so is tea, but in another shape;" and tea in America is not only detestable but nasty, nor can I say much better for the coffee.

Yours truly, E. D. M.

Acknowledgements

Articles Received at the California Farmer Exhibition Rooms, No. 320 Clay Street.

THE UNIVERSITY OF WISCONSIN.

We acknowledge the reception of the *Annual Report* of the Board of Regents of this highly prosperous University.

This Institution has a strong array of the Educational power—a President, Vice President, and Fifteen Professors, with Five Lady Teachers in the Woman Department. There are now 495 students, and a prospective assurance of a large increase.

This Report, with the Statistical Table and other matter, we shall refer to at an early day.

ILLINOIS INDUSTRIAL UNIVERSITY

We have received the Circular and Programme of the Collegiate Course of this Institution for 1870, commenced January 10th. This course is free. D'. John A. Warder, the well known Pomologist, author of Am. Pomology, will lecture on this subject as introductory of the course.

This Institution is highly prosperous. The University is established at Champaigne

PROCEEDINGS

OF NEW ENGLAND GENEOLOGICAL SOCIETY.

We have received the Report of this excellent Society, with the Address of their noble President, which we were happy to publish in our No. 1 of this Volume. The doings of that Society are of great interest, and we shall refer again to them with great pleasure.

BOSTON MEDICAL JOURNAL.

We have the January number of the *New Series* of this highly popular and most valuable Medical publication. It comes to us much enlarged, and with many valuable reports on Medical subjects in all departments—reports of great value to the Medical world.

NATIONAL TEMPERANCE ADVOCATE.

We have received No, 1, Vol. 5, of the *National Temperance Advocate* published at New York, at the Society's Publishing House, 172 William Street, at $1 per annum. Every friend of Temperance should have this valuable monthly.

THE OHIO FARMER.

We have received a file of the *Ohio Farmer*, published at Cleveland, Ohio. We welcome this good advocate of the cause; a Journal that we knew in long, long years ago. Under its New Series we bid it "God speed," and shall look for it with pleasure.

OLIVER OPTICS.

This is a well known and very popular Magazine for "Our Boys and Girls," and the Magazine is very appropriately named indeed, for Boys and Girls are the Olive'r 'Plants around our table, and they are to loving hearts the very "Optics" by which we see and recognize the *Beautiful*. Success to this excellent Magazine. Come Boys and Girls, tell Parents to subscribe for this Magazine for you.

Published by Lee & Shephard, Boston, at $3 per annum.

PUBLIC LEDGER ALMANAC.

We acknowledge reception of a copy of Public Ledger Almanac for 1870, a handsome and valuable statistical work of 56 pages, of which *Eighty thousand copies* were published at a cost of *Five thousand dollars*, and a copy sent to each subscriber of this popular Journal. *This is enterprise* and liberality combined, and will tell upon the Leger of accounts upon a bright page. Thanks for the work, and the complimentary card within.

PRIZE ESSAYS.

We have received a pamphlet with *three Prize Essays* on cooked food for Domestic animals of the Farm, with full directions for using the famous Prindle Agricultural Steamer and Cauldron, a very interesting series of Essays.

THE RURAL SOUTHERNER.

We have another publication from the South, which is devoted to Agriculture and Horticulture, published by Samuel A. Eckels, of Atlanta, Georgia, a Journal that will do good. The south is waking up in earnest to Rural Interests, and we are glad to see it, and wish full prosperity for all

PETERS' MUSICAL JOURNAL.

This popular periodical of sweet songs comes to us regularly, and is an accepted messenger of sweet sounds.

OVERLAND MONTHLY.

We have the February number of this now highly popular and prospering Magazine of California Literature. This month's is indeed a credit to our State, and to all connected with it.

THORBURN'S SEED CATALOGUE.

This old established Seed Warehouse send us their new and enlarged Priced Catalogues this month, said to be the largest issued by any Seed Warehouse in the United States.

"*Vicks' Seed and Flower Establishment*, Rochester, New York.

By Samuel Vick Esq., a noted Seedsman and Florist. This is one of the most popular Florist and Seedsman of the age.

Vanderbilt Brother, New York, Wholesale and Retail Seedsmen.

O. Dawbarn and Co., New York and Canada Wholesale and Retail Seedsmen.

Agents Wanted.

We want good Agents for every County in the State to canvass for this Journal.

We wish to employ good, smart, capable, intelligent men—those who have common sense views upon the VALUE OF OUR AGRICULTURAL INTERESTS.

To persons of general information, and of active habits and courteous manners, a very liberal salary can be earned.

None need apply who cannot bring undoubted references. Apply to

EDITOR FARMER.

Farms for Sale

Vineyard Lands for Sale or to Lease.

SAW AND PLANING MILL

FOR SALE AND TO LEASE.

PAPER MILL, LAUNDRY AND FACTORY SITES

FOR SALE AND TO LEASE

Greenbacks Received in Payment.

BY S. BRANNAN.

No. 420 Montgomery Street, San Francisco.

JULIUS WETZLAR, Agt.

Capital Bank, Sacramento.

L. B. AYER, Agt.

U. S. Land Office, Marysville.

K. H. MILLIKEN, Agt.

Calistoga Hotel, Calistoga.

Eighteen farms, 160 acres each, for sale.

In Yuba county, eight miles from Marysville, five miles from the Oregon and California Rail road, on the south side of the Yuba river, near the foothills; well wooded, good water, and good grain or vinyard land.—Terms—one-third cash and the balance in two annual payments. Title, United States Patent.

ALSO, FOR SALE.

Eight farms, 160 acres each,

Three miles above the Calistoga Railroad depot, in Napa county. Terms as above.

ALSO.

Town Lots and Villa Residences.

For sale at Calistoga; numbers of acres of land in quantity to suit purchasers, and liberal terms to those that will make improvements.

ALSO, FOR SALE

Lots of Land.

From 10 to 30 acres—to be planted in Vineyard and Mulberry Trees—vines and trees furnished for planting. One half of the land planted to be received in payment, at the end of four years. None but those that thoroughly understand the business need apply.

ALSO.

Vineyard Lands.

For sale in Napa Valley and Calistoga, in quantities to suit purchasers, on long credit and no interest required from those who are experienced vine dressers

ALSO.

Two farms 115 Acres each.

Two miles above the St Helena depot, on the line of the Napa Valley Railroad. Terms as above, in Greenbacks

ALSO, FOR SALE.

Several small farms.

From 30 to 50 acres each, adjoining the town of Calistoga; four hours by rail and steamboat from San Francisco and Sacramento, and five hours from Marysville

ALSO, FOR SALE.

Town lots.

In Calistoga and Sacramento, without improvements, on the same terms, Greenbacks

ALSO.

Ten farms of timber land.

In Napa County, near the line of the Railroad, at a very low figure. Payments for the same can be made in chopping and hauling wood off of the same.

ALSO.

Twelve farms on the Feather River.

160 acres each—24 miles from Sacramento city, and sixteen below Marysville, on the north side of the river at Nicolaus Ferry, four miles from the California Pacific Railroad.

Long credit to those that improve and are good farmers

ALSO, FOR SALE.

Six tracts of land,

Within 2 1-2 miles of Napa City, varying in size from 50 to 200 acres and in price from $20 to $400 per acre.

ALSO.

To lease, at Calistoga

One Sawmill and Shingle and Planing Mill, 25-horse power.

ALSO FOR SALE OR LEASE,

A good location for a Paper Mill.

At Calistoga. Boiling water furnished from hot springs adjoining the Railroad, and near the Depot.

An inexhaustible supply of tule can be found on the line of the Railroad, within 1 1-2 hours of Calistoga—Tule is now known to be the cheapest material for the manufacture of printing and wrapping paper. An unlimited supply of wood and water in the vicinity.

ALSO, FOR SALE OR TO LEASE,

A Factory.

An excellent location for a Factory on Napa River, at Calistoga. A 25-horse power steam engine is now in running order on the premises.

ALSO TO LEASE,

A Laundry.

Adjoining the Railroad depot at Calistoga, a good location for a Laundry—with a hot spring of 2.4 degrees heat—time, 3 1-2 hours from San Francisco.

ALSO, TO LEASE,

A Vegetable Garden.

A first class Vegetable Garden at Calistoga, with natural heating apparatus from Hot Springs for the greenhouse; everything furnished for working it.

ALSO, FOR SALE.

Houses.

NEW

AGRICULTURAL

BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz.: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY cuts in those parts needing such illustration; so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

THE FIELD AND GARDEN VEGETABLES OF AMERICA By Fearing Burr. Containing descriptions of all Vegetables, their different species and varieties grown in this country, with full illustrations of them.....Price $5 00

TO THE WORKING CLASS.—We are now prepared to furnish all classes with constant employment at home, the whole of the time or for the spare moments. Business new, light and profitable. Persons of either sex easily earn from 50c, to $5 per evening, and a proportional sum by devoting their whole time to the business Boys and girls earn nearly as much as men. That all who see this notice may send their address and test the business, we make this unparalleled offer: To such as are not well satisfied, we will send $1 to pay for the trouble of writing. Full particulars, a valuable sample, which will do to commence work on, and a copy of "The People's Literary Companion"—one of the largest and best family newspapers published—all sent free by mail.—Reader, if you want permanent, profitable work, address E. C. ALLEN & CO., Augusta, Maine. 33 1b

Home Miscellany.

LOVE ON.

BY ELIZA COOK.

Love on, love on, the soul *must* have a shrine—
The rudest breast must find *some* hallow'd spot;
The one who form'd us left no spark divine
To him who dwells on earth, yet loveth not.
Devotion's links compose a sacred chain
Of holy brightness and unmeasured length;
The world with selfish rust and reckless stain
May mar its beauty, but not touch its strength.

Love on, love on—ay, even though the heart
We fondly build on proveth like the sand;
Though one by one Faith's corner-stones depart;
And even Hope's last pillar fails to stand:
Though we may dread the lips we once believed,
And know their falsehood shadows all our days;
Who would not rather trust and be deceived,
Than own the mean, cold spirit that betrays?

Love on, love on, though we may live to see
The dark face whiter than its circling shroud;
Though dark and dense the gloom of Death may be,
Affection's glory yet shall pierce the cloud.
The truest spell that Heaven can give to lure,
The sweetest prospect Mercy can bestow;
Is the blest thought that bids the soul be sure
'Twill meet above the things it loved below.

Love on, love on—Creation breathes the words—
Their mystic music ever dwells around;
The strain is echoed by unnumber'd chords
And gentle bosoms yield the fullest sound.
As flowers keep springing though their dazzling bloom
Is oft put forth for worms to feed upon,
So hearts though wrung by traitors and the tomb,
Shall still be precious, and shall still love on.

WORKS, NOT WORDS.

Not forever on thy knees
Would Jehovah have thee found:
There are burdens thou canst ease;
There are griefs Jehovah sees—
Look around.

Work is prayer if done for God,
Prayer which God delighted hears,
See beside you upturned sod
One bowed 'neath affliction's rod:
Dry her tears.

Not long prayers, but earnest zeal—
This is what is wanted more.
Put thy shoulder to the wheel;
Bread unto the famished deal
From thy store.

Not high-sounding words of praise
Does God want, 'neath some grand dome—
But that thou the fallen raise;
Bring the poor from life's highways
To thy home.

Worship God by doing good—
Works, not words; kind acts, not creeds.
He who loves God as he should,
Makes his heart's love understood
By kind deeds.

Deeds are powerful; mere words weak,
Batt'ring at high heaven's door.
Let thy love by actions speak;
Wipe the tear from sorrow's cheek;
Clothe the poor.

Be it thine life's cares to smother,
And to brighten eyes now dim.
Kind deeds done to one another
God accepts as done, my brother,
Unto him. [*Selected.*

WOMANS POWER AND INFLUENCE.

WOMAN IN A RIGHT PLACE.

In the great questions now agitating the world about "Woman's Rights," we clip the following from an exchange. This is right action:

The Central Union Baptist Association of Pennsylvania, recently received a lady as one of their delegates, and passed the following resolution on the subject:

Whereas: Some surprise was expressed at the appointment of a sister delegate to this body.

Resolved, That we regard such appointment as proper, and we will welcome our sisters—"last at the cross and first at the sepulchre," to seats in our body.

GODLY HABIT.

CLEANLINESS.—A neat, clean, fresh-aired, sweet, cheerful, well arranged house, exerts a moral as well as a physical influence over its inmates, and makes the members of a family peaceable, and considerate of each other's feelings and happiness. The connection is obvious between the state of mind has produced and habits of respect for others, and for those higher duties and obligations which no laws can enforce. On the contrary, a filthy, squalid, noxious dwelling, in which none of the decencies of life can be observed, contributes to make its inhabitants selfish, sensual, and regardless of the feelings of others; and the constant indulgence of such passions renders them reckless and brutal.

THE MOVING POWER.

POWER IN A WOMAN'S EYE.—A lady, when the conversation turned on dynamics, asked the late George Stephenson, the celebrated engineer,—"What do you consider the most powerful force in nature?" I will soon answer that question' said he: "it is the eye of a woman, (to the man that loves her;) for if a woman look with affection on a man, should he go to the utmost ends of the earth, the recollection of that look will bring him back."

OUR MAGNETIC RELATIONS.

BY REV. THOS. E. BOTT.

Whatever the essence of the occult substance, called magnetism, may be, it certainly is possessed of vast, varied and intricate power. Although rarely considered, and by multitudes not even known to exist, it is yet present all around us and within us.

The magnetism of the earth, as a life-sustaining and recuperative agent, ought to be well known. Graham bread, after the most approved pattern, won't do everything. At Our Home the patients are exhorted to walk on the ground. To go barefooted must be excellent, at the right season.—Gravelly earth is better than stone or plank, to travel on; earth is better than gravel; and smooth green sward is better than either.

When a boy, learning my trade in a Vermont town, I used to see an old judge of the United States District Court walk into the street occasionally. Strangely enough he did not go on the sidewalk nor in the middle of the street, but between the two places. Folks laughed about it; and if asked, the judge could not have given a sufficient reason for his conduct. He walked where the secret magnetic forces gave him the most pleasure. Years ago I lived in a thriving town in northen New York. The walks were constructed of what geologists call Potsdam sandstone, and I often found myself walking on the sward, following the example of the judge. I thought it was because the stone was rough.—Doubtless this was one cause, but not the only one by any means. Since looking a little into hygiene, I have found that I am one of those exceptional persons who are unusually susceptible to magnetic changes. Often, but not always, I feel a marked difference between walking on common flagging and earth. One gives a harsh magnetic sensation; the other a pleasant and equable one. Let no one who is not so magnetically keen, deny what he does not very well appreciate or understand. All of us are more or less affected by the magnetic conditions of the physical substances around us.

But our spiritual enjoyments depend largely on our immediate relation to magnetism. One writer makes it the essential element of love. But this is false. Love must have respect and esteem, as something to like and be enjoyed, for its object. Love is not material or physical alone but it is spiritual and mental. Magnetism is a medium through which we may approach an object of respect and esteem, and so brought to an enjoyment and increase of love. Do we love an absent one, we long for his presence. Meeting, there is a mutual giving out and blending of magnetism, which is purely material; but through this our spirits glide into and blend with each other. Just there the words of the poet—

"We are spirits clad in veils;
Man by man was never seen;
All our deep communing fails
To remove the shadowy screen."

get so far over into the region of the false that we fail to receive them. Then, man is seen by man—not in every aspect, by any means, but in his essential character as concerning the points on which they commune and in which they love.—Our companion may change in feeling or character, or both, or we may change; but at that time and point of contact there was union, and real knowledge each of the other. Magnetism, I affirm then, is a grand medium of spirit. For its influence we are told we shake hands and kiss; and further, for it I declare we also eat together.

But let two persons come near each other who love never so well, and if one is in a physically exhausted or mentally depressed condition; if he has lost his supply, and so is in a negative magnetic condition, then the mutual enjoyment of the two is more difficult; probably impossible, until the positive one imparts to the other, and something like an equilibrium is restored. If both are in a negative condition, it will take much grace and resolution for them to remain in each other's presence. They should quietly separate. If they cannot affiliate, they will very likely irritate.—Here, many times, lies the trouble in controlling or quieting children. Here lies the root of many a quarrel. Here is the reason that married couples should have beds for separate use considerable portions of the time. I was amused, last summer, when the papers laughed at both Miss Anthony and her idea that the married should not sleep together. They did not know where she got hold of the idea, and thought it was an original eccentricity of hers. They would not have appeared so ridiculous to us, if they had studied the case of David and Abishag, and the writings of modern hygienists.

Spiritualists affirm that animal magnetism is the medium of our communications and affiliations; but they go further, and say that it is the medium through which departed spirits come to us and communicate; and that these spirits throw magnetism on a patient for his cure. Of the powers of departed spirits I know and care but very little; but one thing I am satisfied of, by analogy, observation and experience, that magnetism is a medium through which the Holy Spirit of God reaches the human heart. If a preacher is a man of true evangelical Christian experience, he cannot immediately be the means of throwing the Spirit upon men, unless he is in a positive magnetic condition. When he begins to fail here, his inspiration begins to fail, or it comes in ill-restrained flashes. Is the hearer in a negative magnetic condition, from want of light, heat, pure air or any physical or mental cause, he is little likely to receive or heed the calls of the Spirit. Proper ventilation and other comforts are necessary, as well as prayer, in order to the greatest success of the Gospel. Let Christian men remember and take heed.

Corisimi, a famous composer of music, being praised for the ease and grace of his melodies, exclaimed,—

"Ah! with what difficulty is this ease acquired!"

"JENNY DARE" AND HYACINTHS.

DEAR COL:—

The enclosed "protest," I have copied out of a letter written by a friend, after reading my directions for growing Hyacinths in water, published in a late FARMER.

The exceptions taken to that method of growing Hyacinths are so remarkable that really I begin to fear that I must be a monster of cruelty.—Cannot you give me a morsal of comfort?

JENNY DARE.

A PROTEST FROM G. W. D.

Green Tree, Jan. 13th, 1870.

A Protest against growing Hyacinths in water. Take a Hyacinths bulb for instance—it must be a large one for such treatment that has been nursed for three or four years, and fattened until it is as round as an Alderman, and after it has been used to such high living, you propose starving it to death—giving it absolutely nothing but *water*, when it is well, and charcoal when it is sick!—And it is sure to be sick, if not before it flowers, certainly afterwards.

You have taken the poor thing from the bosom of its mother earth—you have placed it in the nozzle of a bottle—it cannot move, but though it has no power of locomotion, it has in itself certain little messengers that it sends out to procure food which way do they go? Towards their mother earth, and they bring up against glass! hard glass! harder a thousand times I think, than your heart, but not harder, if you continue to treat them so cruelly.

Grow Hyacinths by all means, grow them in the window, if you like, but give them good fat earth, and they will live, and won't die, and when they have done flowering, set them out where they will produce healthy offsprings, that will bless your eyes in other days. G. W. D.

REPLY.

"G. W. D.," is correct in a measure, Hyacinths rown in water if properly tended, will do well for *one year only* in water, they should then beplanted in the open border to regain their original strength exhausted by excesive overgrowth in a room.

We see no cruelty in the system of growing them in water, it is a common practice, and they do well. They can also be grown in earth in hand some Pots in the house, even then all Hyacinths and other bulbs grown in the house one year either in earth or water should go into the *garden border*, the second year—they never do well the second year in the house collection. Jenny Dare was not so very cruel, her system was right, and such as will always be practised.

IMPORTANT FOR YOUNG LADIES.

THE TRUE STANDARD OF DRESS.—"Girls, you may try yourselves by this standard: You love dress too much when you care more for outward adornings, than for your inward disposition; when it afflicts you more to have torn your dress than to have lost your temper; when you are more troubled by an ill-fitting grown than by a neglected duty; when you are less concerned at having made an unjust comment or spread a scandalous report, than having a *passe* bonnet; when you are less troubled at the thought of being at the last great feast, without the wedding garment, than at being found at the party to-night, in the fashion of last year. No Christian woman, as I view it, ought to give such attention to her dress, as to allow it to take up all of three very important things—namely, all her time, all her strength, all her money. Whoever does this, lives not the life of a Christian, but that of a pagan; worships not at the Christian's alter of our Lord Jesus, but at the shrine, of the lower Venus of Corinth and Rome!"

CONSUMPTION CURED.

The latest method of curing consumption is that practiced at an establishment on the banks of the Rhine called the "Grape cure" Patients have excellent quarters, plenty of fresh air, and every day go into the gardens, each one carrying a basket, which is filled under the watchful eye of the doctor. The patient then retires to a pleasant arbor, and slowly sucks the grapes. A fine orchestra enlivens the curing process, with excellent music. How delightful! It is claimed that permanent cures are effected in from four to six weeks.

TRY THEM.

EARLY RESPONSIBILITY.—Early responsibility is almost equivalent to early sobriety. If a stick of timber standing upright waivers, lay a beam on it, and put a weight on that, and see how stiff the stick becomes. And if the young waver and vacillate, put responsibility on them, and how it straightens them up! What power it gives them! How it holds what is bad in them in restraint!—How quickly it develops and puts forward all that is good in them.

Aristotle was asked what were the advantages of learning. He replied, "It is an ornament to a man in prosperity, and a refuge to him in adversity."

NEW

Russian, Turkish & Roman BATH HOUSE.

No 524 TO 528 PACIFIC STREET,

DR. ZEILE INFORMS THE PUBLIC THAT his New Bath House is now open for the accommodation of patrons. Neither pains nor expense has been spared to make this the best and most commodious establishment of the kind, either in Europe or America.

Convenient and separate apartments are afforded for the administration of bathing by Steam, by Hot Air and by Plain or Medicinal Waters.

Trained and polite attendants will use their best efforts to give complete satisfaction.

DR. ZEILE has also attached to his bathing establishment a few handsomely furnished Suites of Rooms, where he will receive and entertain patients for treatment, who are not affected with any contagious or infectious disease. To secure this accommodation it will be always necessary for engagements to be made in advance of the arrival of the patient.

Open daily from 7 A. M. to 9 P. M. On Sundays from 7 A. M. to 2 P. M.

BATHING—BEST HEALTH RESTORATIVE.

Among all the Restoratives there is none more important, nor more agreeable, nor more safe, and none more refreshing than a Good Bath.

As the Good Book tells us that "Cleanliness is Godliness," it is an easy way to begin a better life, and surely it is *Typical* of a *change*, for as the one means the washing away of *sin*, so a bath truly washes away a great amount of surface matter from the body, and the clean creature feels something of a new life.

Among all the Bathing places in our city, (and there are many of them of an excellent kind and and always in a clean and inviting condition,) there is no establishment that can at all compare with the most excellent, extensive, and truly grand Establishment of Dr. Zelle at the Roman and Turkish Bath House on Pacific Street, to which we have several times alluded, as in reality a public benefit to our city.

We now speak again of Bathing, for the purpose of correcting a gross and unwarrantable aspersion which has been cast upon the Bath Houses of our City, as being in the hab it of using the waters of their establishments over and over again, a slander which carries refutation upon the face of it, when it is duly reflected upon, that such a thing would be wholly unnecessary, as water is abundant; but as the weight of the aspersion was intended for the great and popular establishment of Dr. Zelle, we feel it a duty to give space to the Letter of Dr. Isaac Rowell, (published in the *Alta* of the 13th,) and Chief of the Health Department, as a *silencer* to so base a slander:

CARD FROM DR. ROWELL.

The following communication was sent to one of the small papers published in this city, in answer to an editorial appearing in their sheet, but was declined by them:

Dear Sir:—In your issue of January 6th appeared an article relative to the Bath houses of this city, and in that article were some broad and unqualified statements, which, if not contradicted, would find many ready to believe them, and which, if believed, would be a source of much evil to our population. Since reading the article mentioned, I have taken the pains to investigate this matter of public baths, and my investigation confirms what I already believed, that the article was written without any foundation, or the slightest regard for truth; in fact it is so unreasonable, so absurd, so ridiculous, that I have wondered that one of the practical knowledge the editor of the *Tribune* is known to possess should allow it to be published. Although no particular bath house was specified, the allusion was evidently to the establishment of Dr. Zelle, on Pacific street, it being the most extensive, and I believe the only institution of its kind on the Pacific coast.

That the minds of the people may be disbused of the impression conveyed by the *Tribune*, a word may not be amiss in regard to the *modus operandi* of Dr. Zell's establishment, and although, perhaps, you will not find the precision and system here displayed in all the bath houses in this city, the public may at least expec to find *clean water*—try which they will.

The buildings and appurtenances have been completed within the last year, at a cost of near *Two hundred thousand dollars*, and the entire establishment is furnished in a style of magnificence seldom found either in public or private buildings, Dr. Zelle did not build his establishment as a speculation from which he expected to realize a fortune, but for the purpose of carrying out and demonstrating his ideal of a system of cure in which the virtue of the various systems may be associated together. For this purpose he travelled over Europe and America, and obtained a practical knowledge of all the appliances of Hydropathy, and with ample means at his command, and a determination to do as he was a mind to, he has the result of his labors in his establishment on Pacific street, the success of which the public must judge for itself.

And when I state that a well sixty feet deep in the solid rock, doubly lined with brick and cement to prevent the possible ingress of any surface water, and from which six hours' pumping with a steam engine is necessary every day to prevent it from overflowing, the people will readily see that it would not be necessary to use the same water six or seven days in succession as a matter of economy, as stated in the *Tribune;* nor is it at all probable that Dr. Zelle, or any other proprietor of baths, would allow anything connected with them by which there would be a possibility of the conveyance of disease from one to another.

Hot water is a very good disinfectant of itself, and one need not hesitate much in entering a room that has been filled with hot steam, or a bath tub that has been filled with hot water, though uncertain as to who had occupied it previously.

It is not my purpose to give a description of Dr. Zelle's baths, nor any other; I would only say that a casual examination by any one will convince him that the idea of the water being used several times in succession is ridiculously absurd; and as for the "sacrifice of public health by bathing," let me say that if no more men in this city died from want of bathing than die from too much bathing, or from diseases contracted in the bath, San Francisco would offer a smaller mortuary report than any other city of the same size in the world.

The article mentioned thought the matter one which should be looked into by the Board of Health, and as an officer officially connected with the Health Department of this city, and thinking that the people may have been made to entertain wrong impressions, I have deemed it proper to make this statement, and I do not make it to exonerate Dr Zelle's and the other baths that I have seen from the imputations in the *Tribune*, but I think it will apply (with perhaps some exceptions) with equal justice to all. At all events, I would recommend the people not to be deterred from bathing their bodies by such articles as the one that appeared in the *Tribune* of January 6th.

ISAAC ROWELL, M. D.,
Health Officer.

MERCHANTS'

GARGLING OIL

IS THE

BEST LINIMENT

IN THE WORLD

FOR MAN AND BEAST.

36 Years in Use.

Is good for Rheumatism, Chilblains, Corns, Whitlows, Caked Breasts, Sore Nipples, Cramps, Galls, Bites of Animals Weakness of the Joints, Contractions of the Muscles, Burns and Scalds, Frost Bites, Painful Nervous Affections, Chapped Hands, Lame ack Pain in the Side, Swellings, Tumors, Tooth Ache, Old Sores, Hemorrhoids or Piles, Flesh wounds, Galls of all kinds.

Sprains, Bruises, Cracked Heels, Ring Bone, Poll evil, Wind galls, Callous, Spavin, Sweeney, Fistula, Sitfast, External Poisons, Scratches or Grease, Springhalt, Sand Cracks, Lameness, Strains, Founded Feet, Mange, Horn Distempers, Garget in Cows, Cracked Teats, Foot Rot in Sheep, and many other diseases incident to Man and Beast.

R. D Taylor, of Concord, Ky, says the Gargling Oil cured a horse of his, injured while plowing by attempting to step over a stump, almost severing the thigh from the body; also that he has used it in his family for fifteen years, and is the best remedy for Cuts, Burns, Bruises, Frost Bites, Strains, Rheumatism, etc., he ever used.

From Crump & Bros., Lochrane Landing, Ohio, Nov. 29th, 1856—We are pleased with your medicines. It has been the means of curing a great number of different diseases upon persons, as also upon horses. We think it cures all you recommend it to do. We want you to send us the larger proportion of the variety for "Family Use," in small bottles.

From Dr. J. P. Terrell, Warren, Ind., March 3d, 1856—I am engaged in the practice of medicine, and find your Gargling Oil an extremely efficient remedy in all cases where an external application is indicated.

From Dr. G. B. Neal, Burris, Iowa, 1855—I have practiced medicine in this county seventy years, and cheerfully recommend your Gargling Oil as the best liniment in use.

From Dr. T. W. Ellis, Troupville, Ga., Jan. 5th, 1856—If I could receive both boxes of the Gargling Oil it would not be too much, as I think I could soon find sale for it all, the inquiry being frequent since it is supposed that I have it for sale.

From Dr. Wm S McCall, Chamois, Mo., Nov. 9th, 1859—Your Gargling Oil is taking the shine off from all liniments of the day. If you desired them I could procure dozens of certificates from the best citizens of the county.

Messrs. McLain & Bros., Wholesale Druggists, Wheeling Va., say, under date of July 24th, 1856 that they can safely recommend the Gargling Oil for more diseases than it is recommended for.

From J. R. Fisher, Uniontown, Pa., June 31st, 1857—Your Gargling Oil is doing much better here than formerly, since its virtues have become known—and the bottles put up for Family Use, without Stain, are much sought for.

Extract of a letter from Hon. Nathan Lindsey, County Judge of Shelby county, Iowa, dated Harlan, April 18th, 1857. It is decidedly preferred to any other liniment sold in this section.

Extract of a letter from Samuel S. Hupp, dated Fallsburg, Ohio, July 17th, 1856—In June last, Henry Sallie had a yearling colt that had what was supposed to be Diphtheria, for more than ten days, so that it could not eat, and the throat swollen almost shut, and by the use of three or four applications of the dollar bottles, did the desired effect.

From A. G. Niel, Lewisville, Cochocton county, Iowa, March 1856—I have used your Gargling Oil for the scratches on my horse, and it cured it with the first application.

From Enos Mather, Middleport, N. Y., July 23d, 1850—I purchased a bottle of your Gargling Oil of your Agent, A. S. Baker, at Middleport, and as yet have used but half of it. I think it has given me more relief in a case of severe rheumatism of long standing, than anything I have ever used before.

Extract of a letter from J. O. Pratt, dated Quincy, Chautauque county, N. Y., August 12, 1854—I have been acquainted with your medicine, (Gargling Oil) for the last fourteen years. It has proved to be a sure cure for Foot Rot in Sheep, for which I have sold the last bottle, and have calls almost daily for more. Please forward as soon as convenient.

Always enquire for MERCHANTS' CELEBRATED GARGLING OIL, and take no other.

Retail price, $1 00, 50 cents, and 25 cents.

Shake well before using, and rub on thoroughly before the fire or some warm substance.

The Gargling Oil has been used as a liniment for thirty six years. All we ask is a fair TRIAL, but be sure and follow the directions.

Ask your nearest druggist or dealer in Patent Medicines for one of our Almanacs and Vade Mecums, and read what the people say about the Oil.

The Gargling Oil is for sale by all respectable dealers throughout the United States and other countries.

Our testimonials date from 1833 to 1863, and are unsolicited Use the Gargling Oil and tell your neighbors what good it has done.

We deal fair and liberal with all and defy contradic tion

Manufactured at LOCKPORT, N. Y.,

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attaches to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Comb, or Gum:

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry: thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H.&L.

Is on the red cover of the packages

Railroad Lands.

CENTRAL PACIFIC RAILROAD,
LAND DEPARTMENT.

Sacramento, March 1st, 1867.

The following statement is made for the information of those who desire to purchase Lands from said Company:

1st. Congress has granted to the Company, all the alternate sections of the public lands designated by odd numbers, within a distance of 20 miles on each side of the railroad;—excepting lands to which a pre-emption or homestead claim had attached prior to the 12th of September, 1862, and excepting lands reserved by the United States as mineral.

2d. The Company has no interest in even sections. To constitute a valid pre-emption or homestead claim within the above exception, the party must have resided on the land prior to September 12th, 1862, and continuously since that time. He must also on that day have been over twenty-one years of age and be the head of a family and have filed his claim in the United States Land Office within the time required by law. If he has not these requisites, or has neglected to file, he will have to buy of the Railroad Company.

3d. All persons who desire to purchase lands from the Railroad Company, including settlers, pre emptors, and other claimants, should make application to the Land Agent, B. B. Redding, at the Land Office of the Company, in Sacramento, either personally or by letter, describing the land by legal subdivisions. This application will be filed and the party will be allowed three months to complete the purchase, and during this time the land will not be sold to another without giving such applicant thirty days previous notice. If the purchase is not completed within three months, the land will be open to purchase by others.

4th. Persons who have valid pre-emption or homestead claims to any tract on an odd numbered section, can purchase the same from the Railroad Company at the Government price of $1.25 per acre in greenbacks, and upon the usual credit of five years if they so desire, by filing an abandonment of their claim in the U. S. Land Office, blanks for which will be furnished by the Land Agent of the Company. Such purchase from the Company has these advantages over a purchase from the Government: The party can leave the land if necessary—he can sell or mortgage it—he is saved the payment of lawyers' fees and expenses of witnesses to go to the Land Office to "prove up" his claim—he can get his title perfected in less time—and he can buy on credit at a low rate of interest.

5th. Actual occupants of lands belonging to the Company, will generally have a preference in the purchase at the regular price. No addition to the price is made where there are improvements on the land made by the settler. Where there are conflicting claimants who apply to purchase, an adjudication of their respective claims will be made by the Land Agent, upon due notice given to both parties.

6th. No lands are sold by the Company or the Government, until after they have been surveyed and the plats returned to the Land Office.

7th. The Company sells ordinary agricultural lands at $2 50 per acre, in gold (except sales to pre-emptors as above). Timber lands, lands in the immediate vicinity of the railroad, and tracts having special value above ordinary farming lands, will be sold at prices and on terms fixed by the Board of Directors.

8th. Persons desiring to do so can buy on a credit of five years by paying twenty per cent. of the price down, and interest annually in advance on the remainder at ten per cent. per annum. Thus a purchaser of one hundred and sixty acres at $2 50, which amounts to four hundred dollars, will pay twenty per cent., or eighty dollars, with interest on three hundred and twenty dollars, which is thirty-two dollars—in all one hundred and twelve dollars, paying each year thereafter thirty-two dollars interest, and the three hundred and twenty dollars at the end of five years. his three hundred and twenty dollars can be paid at any time within the five years, but not by installments, and the purchaser will then be immediately entitled to a deed

9th. Applications to purchase lands can be filed in the Land Office of the Company at any time after the same have been surveyed by the Government; but no applications will be acted upon until three months after the maps have been filed in the United States Land Office. Occupants of the railroad lands who desire to purchase should therefore be prompt in filing their applications in the office of the Company within this time. Blank applications will be furnished to all who desire to purchase. No sales will be made except by legal subdivisions according to Government surveys. Purchasers can buy as large an amount of land as they may wish.

10th. No sales are made by the Company until the land is listed over to it by United States Land Officers. Purchasers are thus assured that the title they obtain is perfect.

B. B. REDDING,
Land Agent C. P. R. R. Co., Sacramento.

Produce Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer on the wharf or landing places.

Corrected Weekly, by EDITOR FARMER.]

SAN FRANCISCO, Jan. 27th

The Grain Market of our City and our State has now shown the results we have long been anticipating as the consequence of a most unwise course on the part of the grower in many cases, and what we esteem a criminal course on the part of those Journals that have given our Farmers wrong counsel.

Farmers that will examine the Reports of the Grain Markets of Europe, and of New York, Chicago, and elsewhere, can easily see that their hope of any better price is gone, and that *low prices must rule for a long time to come*..

Common sense ought to prevail, for with a large amount of Grain still on hand in our State, and so *ex port*, and every week increased proof of large crops the coming year, what can be expected but *low* prices, and every holder of Grain now must see *how much he has lost* by not *selling at Harvest time*.

We profess to be the true friend of the *producer*. If the *Farmers* are prosperous, we shall come in for our just share of that prosperity; if they are depressed, if produce falls, rules low, and markets are dull, the whole State suffers. This *truth* is well established, and when Breadstuffs are low trade generally is depressed, for the active sale of the produce of any country, at remunerative prices, is the quickening *life* blood to the healthy condition of all interests.

We pity those Journals that have, ignorantly in some cases and wilfully in others, led our Producers to "Hold on" to their Grain till the *Golden opportunity* has passed. Will this costly lesson of the year of 1869 be the means of learning our Grain Growers wisdom, and showing them who are their *friends* and who are not.

Produce generally is dull in all departments, and of all kinds. For particulars see our Reports of prices, which indicate a lower rate all round, both Heavy Produce, Dairy, and Stock.

Shade Trees! Shade Trees!!

ORNAMENTAL & SHADE TREES

LARGE COLLECTION OF TREES.

EXTRA SIZE SHADE TREES

Elm and Ash Trees.

I have for very choice and large size ELM and ASH Trees, for PUBLIC SQARES, and STREETS, will be offered in Lots to suit Purchasers

Mulberry Trees.

Large size Mulberry Trees, White Red, and MORUS MULTICAULIS, of all sizes, suitable for planting out as Shade or Ornamental Trees, and also as Fruit Bearing, or for feeding the Silk Worm.

The Mulberry Tree makes a handsome Shade Tree, and is an Ornamental and Fruit Tree combined.

These Trees will be sold in lots to suit purchasers.

OSAGE ORANGE TREES.

A few lots of Osage Orange Trees for setting out as Ornamental Trees. Also

SILK WORM EGGS

Of the FRENCH ANNUAL SPECIES, for sale.

The above will be sold on the best of terms

P. S.—Orders addressed to A. P. Smith, will be promptly attended to.

Sample Trees can be seen at the FARMER OFFICE, where information of the quality of the Trees and the price can be had.

A. P. SMITH,

Of the well known SMITH'S GARDENS,

Sacramento City, Cal.

COMMISSION SALES-ROOM

— AND —

Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandize for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns, and which we have the exclusive sale for this Coast.

We also call attention to the

NEW GATE.

A most valuable invention, particularly to Farmers and Stock Raisers. County Rights for sale.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

The following are the kind of Goods imported or consigned to us for sale and which can be offered on the most favorable terms:

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown.

FINEST MIXED LAWN GRASSES,
FINEST MIXED GRASSES FOR PERMANENT PASTURES.
FINEST MIXED GRASSES FOR SHEEP-WALKS
FINEST MIXED GRASSES FOR MEADOW-LAND.
PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR CHILI CLOVER,
KENTUCKY BLUE GRASS
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental

TREE SEEDS.

TOBACCO SEED,
COTTON SEED,
COFFEE SEED,
TEA SEED.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

These will be ready in the months of November and December.

Collections can be forwarded by post at the following rates:

50 Packets choicest and best				$10 00
25	do	do	do	6 00
12	do	do	do	3 00
50 Packets Good Selected				6 00
25	do	do	do	3 00
12	do	do	do	1 50

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference

Silk Culture:

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

FLOWERING BULBS.

Lilies, Tulips, Hyacinths, Amaryllis, Anemones Ranunculus, Narcissus, Tub-roses, Peony-Roots, Crocus, Snow-Drops,
Very Choice Gladioli

Choice collections of Flowering Bulbs, comprising all the most showy and leading varieties from $5 00 and upwards.

EVERGREEN AND DECIDUOUS SHRUBS,

ORNAMENTAL TREES.

FRUIT TREES.

The newest and most approved sorts

Peaches, Figs,
Plums, Almonds,
Cherries, Walnuts,
Apricots, Nectarines,
Pears, Grapes,

Also the best varieties of Strawberries, Raspberries, Gooseberries, Currants, and Blackberries.

PERPETUAL FLOWERING ROSES

Of the best kinds.

GREENHOUSE AND BEDDING PLANTS.

Any one desirous of having their Gardens look gay through out the season, can be furnished with the plants at a reasonable rate, by applying at this office.

Every information given as to the cultivation of Plants and raising of Seeds, etc. Also respecting the mode and best systems of Pruning all varieties of Trees, etc.

Gardens and Grounds designed and put in order, and every article furnished for same.

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference. WARREN & CO.,

Farmers' Headquarters. 320 Clay Street, up-stairs.

SPLENDID PREMIUMS!!

1870!

OUR SEVENTEENTH YEAR

AND

THIRTY THIRD VOLUME

OF THE

"California Farmer."

With the New Volume in January we begin our SEVENTEENTH YEAR of LABOR with this Journal,

THE CALIFORNIA FARMER PREMIUMS.

The CALIFORNIA FARMER will club with the following Magazines and Journals, and furnish them for the year 1870 at the following rates.

The New York Independent,

PREMIUM ENGRAVINGS,

The California Farmer and the Independent both for $7 50, and to present them with Richie's splendid steel engravings of GRANT and COLFAX, the price of which is $2 each, thus giving them these TWO Splendid and Popular Pictures worth $4, and both these Papers for $7 50

The CALIFORNIA FARMER and the New York Christian Union, new series, Edited by Rev HENRY WARD BEECHER, $7 50

The CALIFORNIA FARMER and the Harper's Monthly, Weekly and Bazar, $14,00

The CALIFORNIA FARMER and either of Harper's Magazines delivered post paid $8,50

The CALIFORNIA FARMER and the New York Weekly Tribune, $6,50

The CALIFORNIA FARMER and the American Agriculturist, $6,00

The CALIFORNIA FARMER and the New York Monthly Horticulturist with extra Steel Engravings of "Country Life," $7,00

The CALIFORNIA FARMER and the Phrenological Journal of New York now in its 60th Volume, $7,50

The CALIFORNIA FARMER and the American Stock Journal, $5,50

We shall add others with our next issue.

Any other Journal or Periodical desired we will furnish with the FARMER on the most liberal terms when desired

The Terms of the FARMER will remain the same—$5 per year, $3 for six months, (gold price) and $1 extra when payments have been delayed and these terms are unchangeable. A liberal allowance for clubs; when five copies are paid for six copies will be furnished.

We call attention to the Premiums offered, to the Union of other Journals with ours.

WARREN & CO., Editors and Publishers
320 *Clay St.*, San Francisco

GYPSUM.

(Sulphate of Lime.)

This well known but most wonderful fertilizer has not yet been practically introduced into the Agricultural interests or before the minds of the California cultivators, for the reason that there was no supply, and because it was hard to make them believe our lands needed manuring.

The time, however, has arrived when, by the admitted fact of the deterioration of our soil and the lessening of crops, something must be done to restore the soil and bring it into that state of fertility necessary to make it profitable to cultivate the soil.

Gypsum is a compound of Sulphuric Acid and Lime, and the object of this fertilizer is the fixation of Ammonia, thus making it the direct food of plants, either by supplying the Sulphate of Lime or by its decomposition, affording the Sulphuric necessary to the due development of certain plants.

Sprengel's Analyses shows the quantity of Lime and Magnesia, Sulphuric and Phosphoric Acids to be very large in the following plants, and for these this fertilizer has no superior:

Wheat, Barley, Oats, Potatoes, Cabbage, Swedish Turnips, Clover, Beets, Turnips, and root crops generally; thus ensuring to a certainty its great importance to the Farmers.

Liebig's Natural Laws of Husbandry gives conclusive proofs of its superiority as a fertilizer. Clover and Grasses, furnishing details of experiments made by distinguished men in various parts of Europe.

According to the experiments made by Boussingaults, Gypsum is composed of *thirty-three parts* of Lime, *forty-three* of Sulphuric Acid, and *twenty-four* of the water of crystalization.

Gypsum is often called Plaster of Paris, but this is wrong—it only takes that name and character when it has been deprived of its water of crystalization by fire; there it becomes *Calcined Gypsum* or Plaster.

Gypsum for Dry Countries like California, will prove immensely valuable, as when used as a fertilizer in our hot and dry soil, its waters of crystalization are separated by means of our hot climate and go at once to benefit the plants, while the Acids and Sulphate of Lime is taken up by the soil, enriching it to a very great degree.

The undersigned is now prepared to furnish this valuable fertilizer by the quantity to all who desire to try its well attested virtues.

CHAS. J. JANSON,
222 BATTERY STREET

STILL TRIUMPHANT!

"THE COMMITTEE OF AWARDS OF OUR State and Mechanics' Fair, aware of the superior merits of the H & L AXLE GREASE over all others, have again awarded HOOKS & LAMBERT their premium their article having stood the test for over ten years. They are now prepared to sell their well known Axle Grease at as low a price as any other in the market, New York and Chicago not excepted

P. S.—To consumers—Don't trust to the red cart, ask for HOOKS & LAMBERT'S AXLE GREASE. Manufactory, No. 144 Natoma street. Depot 320 Jackson street.

From our Special Correspondent.

PARIS, January 1st, 1870.

THE "BLUE BOOK OF AGRICULTURE."

Once a year the various French Ministers present to the Emperor an exhaustive report on the subjects affecting their department. This is their "Blue Book." The Minister of Agriculture has just submitted his, and as it in no manner effects "foreign relations," there has been no necessity for suppressing the precise documents required, or holding them over 'till they become as valuable as a last years Almanack. First it is necessary to have a look at the Chancellor of the Exchequer. He admits, as all his predecessors have done, that the fiscal burdens on Agriculture ought to be lightened—but then he has no surplus, to realize his desires. It is the Good Samaritan without the oil, and the two pence. He has it is true, exempted Salt for Agricultural purposes, from the senseless restrictions to adulterate it—Agricultural, patents are also liberated from vexatious charges. He has authorised postmen and Postmasters, to collect and bank for the mail population, any sums they may desire to deposit as in a Savings Bank. To return to the Minister of Agriculture. His report on the state of the empire's Agriculture, is "serene." All is excellent, a little progress is still desirable however—Agricultural education occupies the place of honor in his Blue Book. It recapitulates what has already been done, and which I have noticed from time to time, to shorten the term of apprenticeship at the Schools, reduce the crime of study, and the expense of residence. With the view of attracting the educated talent of the Farm Schools, all the Agricultural professorships will for the future be thrown open to public competition and there being a fair field and no favor, the right man for the right place will be secured. The remuneration of the professors will be at once increased. With two such arrangements the government ought to be well served. The first competitive examination, will take place in February next, for the vacant chair of Botany in one of the Imperial Agricultural Colleges. The candidates will have to undergo a severe trial, the test being applied without any time for premeditation.—There are 53 "Farm Schools," recognised, and distributed over the various Departments. These institutions only receive from the State, a grant of a salary to the Director, and a subvention towards the maintenance of boarders. The risks of cultivation are borne by the director, where greater interest in his work is thereby secured. These 53 schools are divided into three classes. Since 1867 a new idea has been put into execution, that of attaching a professorship of Agriculture to the Departmental Normal Training Schools. The pupil-Teachers are thus imbued with a certain amount of information, of a character to benefit whatever locality they may subsequently be appointed to as National Teachers. In addition, these professors are obliged to lecture to the Farmers at certain places in the Department, and to visit as often as possible their holdings. These "rural apostles," are everywhere well received. There are 16 "Agricultural Orphanages," recognised, and aided by the State, of which four are for girls. These establishments are generally conducted by some religious fraternity.

VETERINARY EDUCATION AND SCHOOL GARDENS.

The French Veterinary Schools have ever enjoyed a high reputation, and it is not surprising to find that the three—at Alfort, Lyon and Toulouse, have more applications for admission than can be accomodated. The government intends to enlarge these institutions and improve their fitting up. Veterinary art is in high repute in France, and its chartered professors enjoy superior incomes to the great majority of the M. D's. The system of "School gardens," work well; upwards of 15,000 of these instructed pupils in the pruning, grafting, and rearing of fruit trees—fruit being a staple produce in the empire. The teachers receive no salary, but a gratuity commensurate with their worth. It is also intended to extend the trials, in these plots, of M. Ville's chemical manures, and the experiments already in course of execution promises to be very interesting. I may here remark that the Emperor intends founding a School for Market Gardners in the neighborhood of Paris; the School of Horticulture and Arbori culture has proved such a success, the pupils cannot be trained quickly enough for the demand, that His Majesty has decided to try a new experiment.

AGRICULTURE IN GERMANY, FARM JOURNALS ETC.

A few words more and I will finish with this very interesting Blue Book. In Germany there are what are called "Agricultural Stations," ostensibly destined to test and work out the problems of Agricultural Science, and where the laboratory is on the threshold of the field. France has really only one of these, at Nancy, but the government as well as private individuals regard the matter hopefully, and will assist in the extension of the scheme.

The question of Protection *versus* Free Trade, is begining to take its natural demensions of a National agitation. The Farmers' Journals are very much embarassed—because their clients are powerfully represented in both camps. If the North demands prohibitives tariffs the South cries aloud for open ports. The English treaty expires in February, but it has a twelve-month's grace, notice of its non-renewal not having yet been given to John Bull. It becomes daily more improbable, because the government is helpless, that the Cobden Treaty can be renewed in its entirety.

OILY AND FATTY SUBSTANCES FOR STOCK

Dr. F. Crusius, of Muckern, Saxony, has been directing his attention to the solution of the rôle played by fatty matters contained in plants, and of their influence in promoting the assimilation of food also, in a pecuniary point of view, is it profitable to employ such oleaginous matters, for feeding purposes. Cato has long ago informed us, how the dregs of oil spread over the forage, made not only working animals more vigorous, but preserved them in excellent health. Dr. Crusius selected 12 oxen of the same age, weight, and state, divided them into two classes and weighed each every 14 and 21 days. The lot feed on a small quantity of oily matters, in addition to the ordinary forage which all received alike, soon surpassed their fellows, but in addition, the fat kine, assimilated by 28 per cent, more of the woody matters of the fodders and that their progress for the butchers was more rapid and 20 per cent more economical. The Doctor also experimented upon calves, and showed that their growth was in ratio, not to the caseine a sugar contained in the milk, but to the fatty matters present.—Ellriegel and Ulbricht, have shown the same conclusions, by a series of experiments on pigs.—Physiologically, the presence of fatty matters favors the digestion of the hydrates of carbon etc., once assimilated, they are immediately fitted, to combine with the nitrogenous compounds, and enter into all the tissues, either as muscles or fat, or both.

EARLY ROSE POTATOE—GREAT PRODUCT.

There can be no question but that the EARLY ROSE POTATOE is the EARLIEST, MOST PRODUCTIVE, and BEST POTATOE IN THE WORLD.

The *American Agriculturist* gives the following Report of the

GREATEST YIELD ON RECORD.

Cornelius Simon, of Bloom, Ohio, writes to the *American Agriculturist* as follows: "I took just one pound of Early Rose, (four tubers), and cut them in pieces (about 50), one eye to each piece, and put them in a box to sprout about the first of May. Transplanted the sprouts (about 260) between the first of June and the fourth of July, in a rich sandy soil, in rows two feet apart, putting one sprout every foot in the rows, and produced, by actual weight, 751 pounds of good and large potatoes. The largest potatoe weighed two lbs. and seven ounces. From the best hill I got six lbs four oz. From a piece of ground 16x18 feet, I dug 285 lbs.; at the rate of about 760 bushels per acre."

Fruit lands in the vicinity of St. Joseph and Benton Harbor, Mich., are sold at from $300 to $500 per acre, and some have been held as high as $1,000.

OUR FOREST TREES.

Every civilized nation feels more or less the need of an abundant supply of forest trees. Whether needed for timber to be used in the erection of houses, or in building ships, or for the more common but none the less important purpose of fuel, there is nothing that contributes more to the development of all the sources of national wealth and prosperity. America has felt this need the least, but the day is coming, if not already here, when her people will look back with regret to the time when forests were wantonly destroyed.

It is true there have been many cases where it was necessary to clear off the forest that the land might be cultivated and furnish the food necessary for the early settler; but it is well known that thousands of acres of valuable timber have been removed from land unfit for cultivation, the return from which would scarcely support the laborers who were employed in cutting and drawing it to the nearest market, or converting it into charcoal and ashes.

The land from which these forests were taken is now a silent waste, when, if the trees had remained upon it to this time, its increased value would have paid the interest on its original cost and taxes, and left a large surplus to the owner. Regrets over past follies will avail nothing, unless they teach us to be wiser in future.

In all of our large cities anxious inquiries are made for that indispensible article, timber. If we would extend commerce, ships and docks are needed, and for these more or less timber is required. The builders, the houseless and homeless, rich and poor, know and feel the need of it. Trees suitable for piles now command twenty to thirty dollars each. One of my neighbors not long since sold one hundred for three thousand dollars; ten years since half that amount would have been considered an exorbitant price. Firewood on the lines of our great rail roads, miles away from our cities, sells for seven and eight dollars per cord; and if the demand continues to increase, soon it can not be had for double that amount. The demand increases, although coal and iron are persistent competitors; but the supply of wood decreases more rapidly. There is no reason why the supply should give out; there is land enough within reach of our great cities that lies uncultivated, or, what is more lamentable, unprofitably cultivated, that might be made to grow forests of good timber that would return to their owners a large profit on the investment.

I know many large land owners who have been toiling for the past thirty years to lay up something to keep them in their old age and leave a balance to their children. They have worn themselves out as well as their land, and that something for which they have so arduously labored has not been obtained, and their children are likely to inherit a poor, worn-out farm instead of that competency which their father expected to have left them. Suppose these men had left one half their farms covered with the original forest, or if it was already cleared when they came into possession they had planted out half with forest trees, and then expended all their labor upon the other half, they would have produced better crops and with more profit; one half of their farm would have been rich, and the other half covered with a forest that would be a fortune worth inheriting.

Thousands of men are toiling this day to lay up wealth for their children, when if they would invest a small amount in land and then plant a few acres of our best forest trees, their money would grow into a fortune by the time their children had grown into manhood. To some this may appear visionary; but the writer has lived long enough to see trees grow from saplings that would hardly bear his weight at ten years old, up to great trees two feet in diameter, and he has scarcely passed the half-way house of three-score and ten.

In many portions of our country we need forests, not only for supplying us with timber, but for protection against winds and hurricanes. The farmer's grain is often prostrated by winds that never reached his fields until these protecting forests were destroyed. Fruit-growers are seeking the best means of shelter for their orchards, and a remedy for that dry atmosphere which sweeps through their gardens' shriveling up their finest specimens, checking, if not entirely annihilating, their ardor for fruit-growing.

The little stream that formerly came singing and dancing down from the great wood on the hill is now seen only for a few weeks in the early Spring and Fall, and then there is nothing left but its dry pebbly track. Is it not time we began to retrace our steps and again cover some of our now barren hillsides and many of our valleys with those trees which were not only an ornament and blessing to our land, but would now be a source of incalculable wealth.

The great West, with its wide reaching treeless prairies, feels the need of forests even more than we do in the Atlantic States. The farmer on the prairies needs a shelter from the winds, the value of which no one but those who have experienced the want can appreciate. In no way can such a protection be provided better or cheaper than by a belt of trees. Then the convenience of having timber near at hand for building fences, stakes for vines, trees, and a thousand little necessities for which wood is indispensable.

A farmer who has provided a belt of trees around his farm has protected his fields from winds, and his grain will remain standing until ready to harvest. His fruit remains on the trees until ripe; and in a great measure his buildings are safe against those fearful hurricanes which frequently rush with such destructive force across those level plains. If people will persist in residing on those prairies, they certainly ought to be protected, but they should learn how to do it themselves, and not expect that Nature will rear it merely for the asking, without putting forth an effort on their part.

I have a vivid recollection of spending several years near those grand old prairies where the wind went and came without hindrance. One afternoon on coming home I found my house unroofed, and the place where a greenhouse stood in the morning swept clean, not a flower pot, brick, or piece of glass left to show that I ever possessed a conservatory of fine plants. I can call to mind several instances of like character, each of which leads me to think that a *strong* protection is often required to enable the settler in the West to *keep* his foothold after he has obtained one.

The question is, *How* shall protection be the most readily provided?—how shall we get the trees we need? My only answer is, *Grow them!* This will require time and expense, most certainly—and what blessing does not? It takes time to get wealth, unless you are so fortunate, or unfortunate, as the case may be, as to have it given you; if so, it probably required time for the giver to obtain it. The great and important truth which I wish could be impressed upon the mind of every land-owner in America is, if you want improvements, *begin*, yes, begin them now! Do not put it off because you have no time to attend to it at present, nor because it will take so many years, and a little outlay at the start. You may say, "I cannot wait so long." Who asks you to wait? Time moves in spite of you. Plant the seeds to-day, and while you are making up your mind whether you will wait a few years for them or not, the trees will be growing.

How often do we meet men with abundance of means who will tell you that they would like to have a few trees here or there, a vineyard, or orchard, or a grove, and you propose that they should immediately commence planting; the almost invariable answer will be, "I don't care for the expense, but I can't wait so long." I can count many such men among my acquaintances who have made the same excuse for the last ten or fifteen years, and they have not commenced that grove or vineyard yet, and done very little toward the orchard.

There are men, however, with whom to think and to act are near relatives, and a letter which I lately received from one who is a past octogenarian calls to mind a circumstance which happened several years ago; it also illustrates the fact, that there is never a period in life in which a man may not do some good to somebody by planting trees, and often he will gather the blessing himself, although he little expects it. When I was in my fourteenth year, a gray-haired uncle of sixty, who had just purchased a new farm, requested me to pull up some of the young trees which were growing in masses in my father's garden, and put them on a load of goods which were going to his place. With the assistance of my father I did so, tying the bundle to the body of the wagon, as there was no room on the load. I well remember the remark of my father at the time: "Uncle John, you are rather old to think of growing an orchard." "Never mind," replied my old uncle, "it is certainly not too late for me to try." That uncle still lives, and has been enjoying the fruit of those trees for many years. It is well that we can not all be sure of living to such a venerable age, for in that case I fear we would never begin, as "Time enough" would become the motto, instead of, as now, "No time."—*Fuller's Forest Tree Culturist.*

SANTA CLARA COLLEGE.

This highly distinguished College, already so well supplied with fine buildings, will soon make still greater improvements by the addition of a splendid structure, to cost over *a quarter of a million of dollars*—the preparation of the Plans with Specifications costing alone *one thousand dollars.*

The New Building to be erected is designed for an "EXHIBITION HALL," with Dormitories, thus most liberally providing for the comfort and convenience of the Pupils of this excellent and prosperous Institution.

A very gratifying letter we have received from the Rev. Father Varsi, S. J. The President, expressed the earnest desire of the Faculty to do everything for the best interests of Pupils entrusted to their care.

Home Correspondence,

MINERVA GLEN, Jan. 23, 1870.

COL WARREN:

Dear Sir—Saturday is the day we have time to go to the Post Office, and yesterday, among our other mail, came the FARMER. My letter of the 4th inst., occupying a pleasant corner, pleased us and our friends very much, although when I wrote it I never expected to see it in print. I thank you for the compliment. Though the desire to be conspicuous is not a characteristic of mine, however, while these long winter evenings last, if my humble pen products can add to the happiness of the FARMER or be beneficial to its numerous readers, I am ever ready to improve an idle moment in the behalf of both.

RAIN, GLORIOUS RAIN!

Our mountain lands have been visited by an abundant supply of this life of vegetation within the last week or ten days, but we regret to learn that the valleys have not been equally blest. The rain on the mountains has not come in "torrents" this season like former years, but has come in fine, steady, soaking showers—the most beneficial kind of rain. I put my grain all in, in the month of November, in anticipation of a dry season, and the result now is most gratifying.—Beautiful green fields, the wheat six inches high, strong and vigorous, which seems now to rejoice under the present grateful showers.

Farmers in this country, and especially those on hill side lands and high lands generally, should never fail to put their crops in as soon as the first rains fall, for I believe in the "summer fallow," where it is practicable, and sow before any rain falls, will be much better.

THE VINEYARD.

I have about done pruning, and am about ready for the plough. To commence; a vineyard should be ploughed twice, and then the weeds kept down with a light cultivator—the work close around the vine will, of course, have to be done with the hoe.

I tried an experiment last year with the *Muscat de Alexander*, by high trellising, and I was so much pleased with the result that I shall adopt that method with all of mine hereafter. The fruit was much larger, ripened earlier by ten days than the low pruning system, and the vines made a much more vigorous growth, and had altogether a far healthier appearance.

GOOSEBERRIES.

The Mammoth Gooseberry has done well with me since I began to use common wood ashes as manure for them; they never succeeded well before.

On these and kindred subjects I may speak again soon. To-day the "orb of light" has broken through the veil of mist which, for many days, has kept his face obscured, and now the bright green grass and trembling leaves, bespangled with the remnants of receding dews, dance, glitter and sparkle in his joyous rays. And we, too, will drop the weary pen, and hie forth, to rejoice as they rejoice. Adieu.

Yours truly,

A. K.

REPLY.

We were so pleased with the plain and happy descriptive style of our correspondent "A. K." from that (must be) happy spot, "Minerva Glen," that, although we realized that it was intended as a *private letter*, yet we felt it was *too good* not to be enjoyed by others as good seed, and so it has proved, very happily, for we have the present letter from "A. K." which contains *important* facts and suggestions upon Grape Growing (training) and the Culture of the Gooseberry that will be of much service to all our readers.

We return thanks to "A. K." for his pleasant and interesting letters, and hope to receive many more, which we know will be esteemed by our readers as well as by ourselves

TRUE PHILANTHROPY.

The latest recorded gift of Mr. Peabody—so says the *Queen*—was a sum of £2,000, free of law expenses and legacy duty, to the Rev. J. O. M'Ausland, rector of Oronmore, Ireland. The reason assigned for this munificent present is the great pleasure the donor had felt in reading Mr. M'Ausland's treatise on the "Hope of Israel."—The subject is a Jewish one, but evidently touched a chord of sympathy in the eminently Christian spirit of the lamented philanthropist.

BIG BUSINESS.

A. T. Stewart & Co., of New York, who generally do a non-fluctuating business, have discharged sixty of their clerks since the first of January.—Claflin & Co. have been obliged to dispense with fifty-six of their men, and Spaulding & Co., thirty. A. T. Stewart & Co., in their establishment, employ about 1800 clerks, male and female. Nice lot of clerks that!

FARMERS,

Read "Work and Think," a Poem, on 18th page. It is worth reading.

Agriculture.

WORK AND THINK.

Hammer, tongs and anvils ringing,
Walking echoes all day long,
In a deep toned voice are singing
Thrifty Labor's iron song,
From a thousand fly wheels bounding,
From a thousand humming looms,
Night and day the notes are sounding
Through the misty fact'ry rooms.
Listen! workmen, to their play—
There's advice in every clink;
Still they're singing—still they're saying—
"Whilst you labor, learn to *think!*"

Think what power lies within you,
For what triumphs ye are formed,
If, in aid of bone and sinew,
Hearts by emulation warmed.
Mighty though ye woo and cherish,
What shall make your spirits dawn?
What shall make your high hopes perish?
Why shall ye mind Fortune's frown?
Do you wish for profit, pleasure?
Thirst at Learning's fount to drink?
Crave ye honor, fame or treasure?
Ye the germs have—work and think!

Think! but not alone of living,
Like the horse from day to day;
Think! but not alone of giving
Health for pelf, or soul for pay!
Think! Oh, be machines no longer—
Think! 'twill make you fresher, stronger;
Link you to the great and good!
Thought exalts and lightens labor,
Thought forbids the soul to sink!
Self respect and love for neighbor,
Mark the men who work—and think!

Think!—and let the thought new-nerve you—
Think of men who've gone before:
Leaving lustrous names to serve you—
Your's the path they've plodded o'er!
Freedom fights and winches charter
With the sword of thought—the pen!
Tyranny can find no quarter
In the ranks of thinking men,
Think! for thought's a wand of power—
Power to make oppression shrink;
Grasp ye then, the precious dower!
Poise it—wield it—work and think!

Hold your heads up, toiling brothers;
'Mongst us be it ne'er forgot,
Labor, for ourselves and others,
Is for man a noble lot,
Nobler far, and holier, higher,
Than vain luxury can claim,
If but zeal and worth inspire.
And true greatness be our aim,
Power to compass this is given—
Power that forms the strongest link
'Twixt an upright man and Heaven,
His noblest power—the power to *think!*

WHAT I KNOW OF FARMING.

BY HORACE GREELEY.

ESSAY NUMBER THREE

When my father was over sixty years old, and had lived some twenty years in Erie County Pennsylvania, he said to me: "I have several times removed, and always toward the West; I shall never remove again; but, were I to do so, it would be toward the East. Experience has taught me that the advantages of every section are counterbalanced by disadvantages, and that, where any crop is easily produced, there it sells low, and sometimes cannot be sold at all. I shall live and die right here; but, were I to remove again, it would not be toward the West."

This is but one side of a truth, and I give it for what it may be worth. Had my father plunged into the primitive forest in his twenty-fifth rather than his forty-fifth year, he would doubtless have become more reconciled to pioneer life than he ever did. I would advise no one over forty years of age to undertake, with scanty means, to dig a farm out of the dense forest, where great trees must be cut down and cut up, rolled into log heaps and burned to ashes where they grew.—Where half the timber can be sold for enough to pay the cost of cutting, the case is different; but I know right well that digging a farm out of the high woods is, to any but a man of wealth, a slow hard task. Making one out of naked prairie, five or ten miles from timber, is less difficult, but not much. He who can locate where he has good timber on one side and rich prarie on the other is fortunate, and may hope, if his health be spared, to surround himself with every needed comfort within ten years. Still, the farmer's life is a rugged one, especially for women and children; and I should advise any man who is worth $2,000 and has a family, to buy out an "improvement" (which, in most cases, badly needs improving,) on the outskirts of civilization, rather than plunge into the pathless forest or push out upon the unbroken prairie. I rejoice that our Public Lands are free to actual settlers; I believe that many are thereby enabled to make for themselves homes who otherwise would have nothing to leave their children; yet I much prefer a location within the boundaries of civilization to one clearly beyond them. There is a class of drinking, hunting frolicking, rarely working frontiersmen, who seem to have been created on purpose to erect log cabins and break paths in advance of a different class of settlers, who regularly come in to buy them out and start them along after a few years. I should here prefer to follow rather than lead. If Cooperation shall ever be successfully applied to the settlement of wild lands, I trust it may be otherwise.

He who has a farm already, and is content with it, has no reason to ask, "Whither shall I go?" and he may rest assured that thoroughly good farming will pay as well in New England as in Kansas or in Minnesota. I advise no man who has a good farm anywhere, and is able to keep it, to sell and migrate. I know men who make money by growing food within twenty miles of this City quite as fast as they could in the West. If you have money to buy and work it, and know how to make the most of it, I believe you may find land really as cheap, all things considered, in Vermont as in Wisconsin or Arkansas.

And yet I believe in migration—believe that there are thousands in the Eastern and Middle States who would improve their circumstances and prospects by migrating to the cheaper lands and broader opportunities of the West and South.—For, in the first place, most men are by migration rendered more energetic and aspiring: thrown among strangers, they feel the necessity of exertion as they never felt it before. Needing almost everything, and obliged to rely wholly on themselves, they work in their new homes as they never did in their old; and the consequences are soon visible all round them.

"A stern chase is a long chase," say the sailors—and he who buys a farm mainly on credit, intending to pay for it out of its proceeds, finds interest, taxes, sickness bad seasons, hail, frost, drouth, tornadoes, floods, etc., etc., deranging his calculations and impeding his progress, until he often impelled to give up in despair. These are men who can surmount every obstacle and defy discouragement—these need no advice; but there are thousands who, having little means and large families, can grow into good farm more easily and far more surely than they can pay for it; and these may wisely seek homes where population is yet sparse and land is consequently cheap.—Doubtless, some migrate who might better have forborne; yet the instinct which draws our race toward sunset is nevertheless a true one. The East will not be depopulated; but the West will grow more rapidly in the course of the next twenty year than ever in the past. The Railroads which have brought Kansas and Minnesota within three days and California within a week of us, have rendered this inevitable.

But the South also invites immigration as she never did till now. Her lands are still very cheap; she is better timbered, in the average, than the West; her climate invites; her unopened mines and unused water power call loudly for enterprise, labor and skill. It is absurd to insist that her soil is exhausted when not one third of it has ever yet been plowed. I do not advise solitary migration to the South, because she needs schools, roads, bridges, mills, etc., etc., which the solitary immigrant can neither provide nor well do without: and I have no assurance that he, if obliged to work out for present bread, would find those ready to employ and willing to pay him; but let a hundred Northern farmers and mechanics worth $1,000 to $3,000 each combine to select (through chosen agents) and buy ten or twenty thousand acres in some Southern State, embracing hill and vale, timber, and tillage, water power and minerals, and divide it equitably among themselves, after laying it out with roads, a park, a village plat, sites for churches, schools, etc., and I am confident that they can thus make pleasant homes more cheaply and speedily there than almost anywhere else.

Good farming land, improved or unimproved, is this day cheaper in the United States, all things considered, than in any other country—cheaper than it can long remain. So many are intent on short cuts to riches that the soil is generally neglected, and may be bought amazingly cheap in parts of Connecticut as well as in Iowa or Nebraska. When I was last in Illinois, I rode for some hours beside a gray coated farmer of some sixty years, who told me this: "I came here thirty years ago, and took up, at $1¼ per acre, a good tract of land, mainly in timber. I am now selling off the timber at $100 per acre, reserving the land." That seems to me a good operation—not so quick as a corner in the stock market, but far safer.—And, while I would advise no man to incur debt, I say most earnestly to all who have means, "Look out the place where you would prefer to live and die; take time to suit yourself thoroughly; choose it with reference to your means, your calling, your expectations, and, if you can pay for it, *buy it.*—Do not imagine that land is cheap in the West or the South only; it is to be found cheap in *every* State by those able to own and who know how to use it."

For Grain Growers.

Keeping Weevil out of Wheat.—A correspondent of the *Southern Cultivator* says; I will give your readers a simple remedy for keeping weevils out of wheat. When your wheat is housed, cut some elder sticks, say four to a common sized wheat house, and stick them end-wise into the wheat; the weevils will not trouble it, I have seen it tried often. Say to the ladies, if they want to keep the weevils out of their bean seed, when they gather them, put them in boiling water for a minute, then dry them, and they will keep for years.

The entire number of sheep in the United States is over 23,000,000. One half of these are kept in seven States, Ohio taking the lead, with 6,730,000 head, and producing nearly one-sixth of all the wool in the country. Michigan shows third in this list. Though California is not named, yet we number 3,000,000 sheep.

The Daniel Webster homestead farm, in Franklin, N. H., has been sold for $15,000.

It ain't best tew swap with yure relashuns, unless you kan afford tew give 'em the butt-end ov the trade

THE FARMER'S STORE DEBT.

[We ask the careful, considerate, and even prayerful reading of the following chapter of many a young farmer's life—both prosperous and adverse, and we now ask each reader when they have concluded the chapter—Choose you this day, which example will you take? We hope "pay as you go" will be your motto; this you can do if you "sell at harvest."—Ed. Farmer.]

It is an old saying that "little leaks will sink a great ship." This is peculiarly applicable to running in debt at a store. The wants, real and imaginary, of a large family, are large in their yearly aggregate. A little of this and that every day or two may be counted at the end of the year in hundreds of dollars. The storekeeper trusts you through the year for such things as will supply your little wants, and to your surprise his bill foots up in the fall to from one hundred to five hundred dollars. He wants his pay; must have it, no matter what the price of wheat, butter, hogs, or hops. You find his bill, after paying your hired help, blacksmith bill, repairs, interest, and so forth, will absorb all the balance of the proceeds of your farm. Nothing left! So you commence another year's credit. At the end of the year you find the same result. The storekeeper has absorbed all your balance. So you go on from year to year until a hard season, poor crops or poor prices. You can't pay him; he harasses your mind and gets a lien on your property. You are now under a harrow that will be very likely to crush the ambition out of you, and you will go from bad to worse, until you are forced from the homestead.

Now all this should not be! There is a better way! No man, or his family, can bear to be under such a load of obligation as an unpaid store debt is sure to entail. The burden is too heavy for enjoyment or pleasure. But how can we avoid it? By studying economy. Let us illustrate—My young friends, John and Edward Say, both got married and settled on forty-acre farms, in the same neighborhood. Their own savings, as young men, with a little help from the old people, gave them their homestead and household effects free of all debt, with a few dollars for necessaries to start housekeeping and business. Both thought to get along and keep clear of debt, but a few weeks found their little store of money exhausted. John and his wife were firmly resolved that nothing short of sickness would make them contract a debt. A pig was wanted to eat up the milk of the cow; the wife's father had given her no money to buy one. John went and worked two days for a neighbor and brought home the pig. When the cow came to grass, their pans were too few to hold the milk. A few pounds of butter supplied the lack and also a bag of salt

A hoe was needed, and the wife suggested that a few dozen eggs she had saved would pay for that and a spool of thread and a paper of pins. They had received word that some of their old friends would visit them, the first of the week. A few groceries were needed, to have things in good shape. After casting about, the wife remembered that a neighbor wished some sewing. She applied for the job, and the money paid for the necessaries.

Garden seeds were needed. John thought of a pile of old iron that a former occupant had left. This supplied the means to purchase seeds for the garden. By eschewing luxuries, a day's work now and then for others, a judicious husbanding of eggs, rags, and the use of the needle, a few vegetables from the garden, and many other savings and exchanges, that the economical and thrifty know how to make, they were carried safely through, until they garnered in the harvest, the proceeds of which gave them the means to pay their way. In a few years the "pay as you go" principle made John Say and his wife independently well off.

Now, how did Edward Say and his wife manage, and what came of it? When Edward was in town, one day, the storekeeper solicited him to trade. He told him he did not mean to get in debt. The merchant said that was a good resolution. "But whatever you may need I will be glad to let you have and let you pay for it in the fall." Edward told his wife. After a little they were sorely perplexed for some little articles, and embraced the opportunity of credit at the village store. The ice once broken, the account grew little by little. When the products of the little farm were disposed of, to their surprise, it took all the proceeds to pay up their indebtedness.

The road once traveled, it was easy to run the same course another year. The sickness of his wife, for several weeks, with the extra expense of a hired girl and doctor's bills, so swelled the expense that after everything was sold, a balance still was left unpaid. A poor season followed, and a mortgage on the farm. A few year's fighting with such disadvantages, sold out the farm and left only enough to pay the expense of emigrating to what then was the far West.

These cases illustrate the "pay as you go" system, and also the disadvantages of running a store bill.

"Pay as you go," is a golden maxim. Eschew tea, coffee, tobacco, new dresses, new coats, new carriages and everything in the line of luxuries, until you pay ready money. Money cheapens everything. It is a great economizer. You think twice, and buy cheap with the ready cash.—People who run store debts, buy thoughtlessly many things not needed, and at high prices.

Farmers, run no store bills!

☞ The Mobile Weekly Register, the oldest Democratic paper in the South, is said to have reached a larger circulation than was ever attained by any Journal South of Mason and Dixon's line. It is full of interesting varied matter, having an able Agricultural Department, presided over by the veteran Editor and successful Agriculturist, Hon. C. C. Langdon. Its General Literature, Poetry, Stories, etc., make it highly acceptable to the Ladies.

The coming year will open with a new continued story, of deep interest, by one of the most distinguished writers of the day. The price was recently reduced to $3,00 per year which for so large a paper, (12 pages,) is extremely cheap

PRESERVATION OF APPLES.

The London *Gardener's Chronicle* says: "He covers the floor of his cellar with hurdles, two in thickness, and on these he puts a little straw, upon which the apples are placed without further care or attention, except removing all that appears to be faulty as he places them in the cellar, and he thinks it is unnecessary to use any particular care in this respect. He has at present one hundred and ten bushels of apples thus heaped up in his small cellar; two or three times a week he gives a good wetting with fresh water, as much as he thinks will wet the whole of them. This water drains off through the straw and hurdles into a well. In this way his apples keep well until the time he usually disposes of them; the best to make him a good return after Christmas. At present the apples look as well and as firm as if just gathered, and I understand that, during the last ten years, they have always kept just as well and as fresh as now.

How much less troublesome and easy of application for keeping large quantities of fruit, than storing them away in dried sand on shelves, or in boxes, or in any other of the ways highly recommended."

Will not our Orchardists try this plan.

UTAH CURRANTS.

Both seeds and plants of these currants have been repeatedly sent to the Department during the past six years. They appear to be varieties of *Ribes aureum*, and although the fruit of several of them is large, of fine appearance, and of a variety of colors, from light yellow to black, yet it has large seeds and but little pulp, and will not probably be cultivated where the improved varieties of the red currant (*Ribes rubrum*) can be procured. It is said that fine jellies have been prepared from these fruits, forming a good substitute for that produced by the red and the white currant of the gardens. Many of these Utah sorts produce as large fruit as the cherry currant, but of no distinctive flavor.—*Report of the Superintendent of the Experimental Garden and Grounds.*

But, with all deference to the opinion and experiments of the Superintendent of the Experimental Garden, we believe that these Utah currants possess superior qualities that only need to be developed. Seedlings from these Western varieties already show a great advance upon the wild sorts. Our gardeners have a wide field for experiments, and currants that will astonish the old fogy world will yet be produced from our wild native varieties.

So says our cotemporary, the *N. Y. Sun* in reply to the criticism of the Washington Superintendent and we join the *Sun*, and say: Plant them and then seed—replant seed again and again, and they will improve more and more, in this way the best fruits known have been produced.

PROGRESS OF VINEYARDS IN FRANCE.

The cultivation of the vine now extends over seventy-nine French departments, producing nearly 71,000,000 hectolitres of wine, which, at the average price of 23 francs per hectolitre, represents a total value of 1,600,000,000 francs. It feeds one-fifth of the whole population of France, and produces a revenue equal to one-fourth of the value of the agricultural produce of the country. The vine will grow on all kinds of soil. At Cape Breton it grows on the quartziferous sand of the dunes; in Medoc, on sand mixed with pebbles; in Anjou, on clay; in Champagne, on chalk. The wine known as Hermitage is produced from vines growing on granite rocks, and the best vineyards of Burgundy are on limestone cliffs and marshy ground. Here then is a value of $800,000,000 in wine, when will California approach it?

Fruit lands in the vicinity of St. Joseph and Benton Harbor, Mich., are sold at from $300 to $500 per acre, and some have been held as high as $1,000.

At the great Agricultural Show of the Royal Agricultural Society of England, held at Manchester, there were 7,724 entries of agricultural implements, made by nearly 405 exhibitors.

A MONTHLY PAPER

SMALL FRUIT RECORDER AND COTTAGE GARDENER.

AT ONLY

50 CENTS PER YEAR.

Devoted solely to small Fruits, and Vegetable and Home's Adornment. The Editor has had a lifetime of PRACTICAL experience, and now has 2 0 acres into SMALL FRUITS. He takes or exchanges for every agricultural and horticultural paper printed in the United States and Canada, and extracts from each, all PRACTICAL matter pertaining to these interesting subjects, that readers of this paper get the CREAM of all these publications. A practical story entitled "EXPECTATIONS REALIZED," will begin in the January number, telling how a person first grew fruits for his family use, and then supplied his village market, and finally worked into a very extensive and profitable business; also the Editor's "*Ravels and Soundings over the Fruit-Farm.*" Besides correspondence from all parts of the United States and Canada from practical fruit growers and flower fanciers.

Splendid inducements offered to those getting up clubs, for particulars send stamp for our beautiful and attractive show bill and "Club Circular." Sample copies of Recorder sent with show bill. Address A. M. PURDY, Palmyra, N. Y.

The show bill is exceedingly beautiful and well worth examination.

BOUND VOLUMES FARMER

☞ Volumes of the "California Farmer" for The last EIGHT YEARS, uniformly bound, can be had at the Farmer Office at $8 per Volume.

These Eight Volumes contain more useful matter touching the practical workings of Agriculture as adapted to California Culture than any Book or Books Extant, as they comprise hundreds of Experiments, Letters and Essays upon the Culture of Cotton, Rice, Coffee and Tobacco; Grapes, Strawberries, and all other Fruits, with the Culture of Hops, Castor Beans, Flax, Hemp, &c. and the Whole series of Essays of L. Prevost on Silk Culture, from early beginning.

This set of Volumes would be a Library of itself and is valuable to the Cultivator of the Soil.

Orders sent to Farmer Office will be promptly attended to

VALUABLE PLANTS FOR SALE.

☞ Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and to so cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, to gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us. WARREN & CO.,
tf *Farmer* Office.

REASONS WHY EVERY FARMER AND STOCK-RAISER SHOULD TAKE THE "CALIFORNIA FARMER."

1st. Every Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State

2d. Every such person should give his sanction and support, generously and voluntarily to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefitted* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and the Stock-raiser will always be better advised of the markets, and that kind of information so important to his interests by constant access to a Home Journal.

6th. The *California Farmer* has faithfully advocated the best interests of the Farmer and Stock-raiser for sixteen years steadily and is the *only Agricultural Journal in California.*

7th. The *California Farmer* contains the most important information relative to these interests in every branch of Agricultural science.

8th. The *California Farmer* contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The *California Farmer* contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Agriculture.

10th. The *California Farmer* is now the *only paper* on the Pacific Coast that is continued by its *original Editor and proprietor*, commencing at the time this Journal commenced; and having been constant in its efforts for the good of these interests, deserves the cheerful patronage of all engaged in industrial pursuits, and of all good men.

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING .....FEB. 3, 1870.

THE CALIFORNIA FARMER READING ROOM, AND MUSEUM OF NATURAL HISTORY.

320 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER OFFICE are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING.

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion, twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SAMPLE COPIES.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination hoping our paper will meet their approval and induce them to subscribe, and to ask their neighbors to subscribe also.

Send for Sample Papers and get up a club. Address

PUBLISHER CALIFORNIA FARMER,
San Francisco, Cal.

Editor's Chair,

OUR SUBSCRIBERS.

We know our patrons will highly appreciate the excellent Essays of Hon. Horace Greeley, which we are now publishing from his *famous Tribune*, a newspaper that has *no superior* in the world for general and extensive news. These Essays we shall give every week, and *we* think these alone are worth *several times* the *cost* of the FARMER.

OUR EUROPEAN LETTER.

We call the special attention of our Farmers to our European Letter this week, as containing matters of very great interest to them. The progress making in the Science of Agriculture, under the liberal patronage of the French Government, and the rapid increase of excellent Schools, and every other means to make Farmers prosperous, is worthy the example of other nations, and the course pursued in France should receive the attention of those who manage *our own* Agricultural Colleges.

It would seem that the Government of France gives to the cause of Agriculture a truly Parental care and protection.

Our Farmers and Stockmen will notice the remarks on feeding stock with fatty substances, like our *Oil Cake Meal*—here we have proof conclusive of its great value. These Letters from Europe we hope will be carefully read by our Farmers, as they furnish many very important truths.

ALWAYS WELCOME!

Our Editorial Brethren on the Pacific Coast, and from any other part of the world, are always bid Welcome to our Editorial Rooms, to our Reading Room, Library and Museum. We shall always feel happy to receive a call from them, here they will find a large collection of Newspapers, Periodicals, and Valuable Publications from all parts of the world, together with an Agricultural and Mechanical Library and Books of reference, with valuable specimens in Agricultural Science, and Models of Implements. They will also find conveniences for writing their letters while in our city, and we shall always be happy to make their call pleasant and agreeable as well as useful to themselves. We repeat, they shall always be WELCOME.

OUR EXCHANGES

By the notice we gave some time since that we could not enlarge our *list of Exchanges*, except to Journals of same interest, or those of value, we hereby give notice that those Journals that do not receive the FARMER after our *Number Two*, will please understand that however much we may regret to refuse the Exchange, it arises from our utter inability to do so, for our applications for Exchange has reached the number of nearly *One Thousand*. This will show our cause of refusal. Those that receive No. 2 and 3 will remain permanent Exchanges.

OUR AGENCY—NEW SAN DIEGO.

We hereby appoint W. B. Bancroft, Bookseller at New San Diego, our agent for all that region of rich country now rapidly filling up with a Rural population.

We invite the cultivators of the soil to call at the Bookstore of Mr. Bancroft and examine THE CALIFORNIA FARMER, which they will find a great aid to them in their agricultural pursuits.

We are also glad to recommend this Bookstore to their special attention, where they can always have their minds improved with good books, and all their wants in the Stationary line supplied so.

VINEGAR. HOW MADE FROM CIDER, WINE, MOLASSES, OR SORGHUM, in Ten Hours, without using drugs. For Circulars, address F. I. SAGE, Vinegar Maker, Cromwell, Conn.

THE SEASON, CROPS, PROSPECT, ETC.

We poor mortals who live here below, enjoying so many of the blessings of Earth, are so much more ready to complain at the ills we suffer, and talk of the shadows we see, than to be grateful for the *blessings* we enjoy and the sunshine over us so that the world is full of complainings and murmurings, when there should be only Songs of Gratitude, with Thanksgiving, and Praise, for so much good as is scattered in our daily path.

Whatever complaining croakers may say to the contrary, we never have had a more profitable season generally than the present one.

If there are some portions of our State where the rains have not fallen and they are suffering for the want of it, that portion of our State is small, while over the broad expanse of it everything wears a most cheering look, giving promise of an abounding crop the coming year; and where there has been a wise and judicious system of culture adopted prosperity is certain.

From the many letters received by us, there comes daily reports of good crops, everything looking well and our Farmers generally satisfied, excepting always those that now see they madea great mistake in not "selling at Harvest." These mistakes, however, of this and former years, has learned Farmers a lesson they will not soon forget

The counsel and advice of such Journals as the *Sacramento Union*, and some small country papers that followed in its wake and talked of a rise in prices, etc., has done great injury to our State, but these Journals will be *remembered* by our Farmers hereafter—they now know who are their friends, and also know how they counsel for their good,

For the last fifteen or sixteen years we ourselves have never seen the country, and its crops, wear a better appearance; never have we seen it look more promising

We read of Snow Storms, Hail Storms, Whirlwinds, Tornadoes, and other dire calamities upon other States, while here, we are now in the enjoyment of New England June weather. Here in our own open Garden grounds, instead of Snow and Ice we have Hyacinths, Crocus, Jonquils, Narcissus, and the Amyrallis all in perfect bloom, with Roses and other flowers in abundance. We have also the Strawberry and Blackberry in blossom, and the Peach in open bud. What other State can boast of a better season? Shall we not then, instead of finding spots on the Sun, rejoice and be exceeding glad for what we *enjoy*; and as with ourselves, so with thousands in many other counties around us.

We invite our kind friends in other States to give us a sketch of *their* season just now—our friend Purdy, at Palmyra, N. Y., of the "Fruit Recorder," and other friends everywhere. By such an interchange of thought and condition, we can aid each other in establishing a History of the Seasons all over our country. Will our friends respond?

THAT SPLENDID BUILDING!

"Who erected that splendid building?" was the question propounded to us by a friend from the interior of our States, a few weeks since, as we were then passing down California Street, and rounding the corner of Sansome Street, and another splendid building—the "BANK OF CALIFORNIA," opposite the one alluded to.

"Who built that building?" said our friend to us again; "it must have cost a 'mint of money.'" "Who built *that* building?" said we; "why, my dear friend, who do you suppose? Why, the FARMERS, the GRAIN GROWERS of California, to be sure! Who but the Grain Growers of California could erect such a stately pile? Look at it carefully and you can see each window-cap and cornice stands out like the bold heads of golden grain, and although that stately pile seems built of granite and iron, it has, in reality, been built with grain. Every foundation pile, every stone, every beam, every flooring timber, every window-sill and every cap, every door-post, from the foundation to the grand roof over all, was *made from the grain of our harvest fields*, therefore we say our Farmers and Grain Growers built that stately building."

Again we said to our friend "Our Farmers begin by *hiring* a piece of land, and if unfortunate, they remain tenants, *bondsmen*, but if *fortunate*, they *purchase* and own their land, and become freeholders, independent men, grow rich, and soon they *own their land* and are *freed-landers* from *rents* and bondage; therefore when we said that building was erected by the Grain Growers of California, it was true, for it was built from the *profits of our Farmers and Grain Growers*, and therefore is indeed the "*Freed-landers' Building*" of California, and you, my friend, will say that its Stateliness, Beauty and Grandeur, is in perfect keeping with the Immense Crops of our Golden Grain, and is also an Honor to the Builder and Owner, and an ornament and a credit to our City and our State, and costing—to complete, land and building—only the interest of *one year's harvest*—A QUARTER OF A MILLION OF DOLLARS!"

PREMIUMS.

THE EARLY ROSE POTATOE.

The wonderful celebrity which is now being attained by the unprecedented excellence of the "Early Rose Potatoe," its great productiveness beyond that of any other potatoe known, its early maturity (7, 8 and 9 weeks) surpassing all others and its great superiority in *quality*, induces us to try to spread its culture as widely as possible.

We therefore will now offer to every *new subscriber* to the CALIFORNIA FARMER, from the commencement of our new Volume, Four pounds of the "Early Rose Potatoe," mailed to them *free of cost*, as a PREMIUM for 1870. This will give them seed for another year, equal to 300 to 500 lbs.

P. S. All new subscribers to our present Volume who kindly sent their names before this, if they will send us word they will use this seed shall have the parcel mailed to them.

SAN JOSE PROSPERING

THEIR PUBLIC SQUARES.

We hear with pleasure always of the prosperity of any place. It is significant of a good Government and of industrious inhabitants; and however hard working a people may be, or however industrious or economical, a bad Government spoils all.

San Jose must be on the right road, for the city is *out of debt*, has fine school houses, splendid public buildings, money in the Treasury, fine macadamized public roads, and is now improving her public squares and ornamenting the streets by planting trees, and if this is not an evidence of prosperity we do not know what is; but knowing of this prosperity we *rejoice* to speak of it.

While speaking of public improvements there, it will be remembered that a year or two since we spoke of the admirable manner in which "The First Public *Square*" in that city was designed and planted by Wm. O'Donnell, Esq., the well-known Florist and Nurseryman of San Jose, some few years since. In that square are about *four hundred trees* of the best kinds, planted with great care and artistic taste. They have all done well, and are now a great ornament to that city—improving greatly the value of all the surrounding property.

The excellent taste displayed by Mr. O'Donnell presents quite a contrast to the unfortunate condition of our public squares, which violate every principle of Landscape Gardening and create a smile of ridicule with all who know anything of Landscape Gardening. In planting the Square at San Jose, Mr. O'Donnell won great credit, and we are happy to learn that the authorities have just entered into a contract with Mr. O'Donnell for the laying out and planting Washington and St. James's Square also, and of completing all the public improvements of the kind in the city. Mr. O'Donnell, having received the unanimous approbation of the authorities for his former faithful labors, is now called upon to further improve and thus beautify this goodly city.

We are glad to record this, as we know the energy, skill and good taste of Mr. O'Donnell, and the city is wise to confer upon him this work, for it will be faithfully done.

The *Daily Patriot* of San Jose, in speaking complimentary of Mr. O'Donnell's labors, thus justly remarks:—

"We are glad to see these improvements going on. Our children and future generations will bless the care and wisdom of our age in so adorning our public grounds, and the memory of Mr. Wm. O'Donnell will be inseparably connected with these BEAUTIFUL SQUARES."

SENDING SEEDS BY MAIL.

The object of the General Government in making the liberal provision it has made, allowing Seeds, Plants, Cuttings, etc., to pass in the United States mails at the low rates named, was to enable Agriculturists, Horticulturists and Florists to scatter *broadcast* over the *whole* of the United States, all *new and valuable* productions as speedily as possible, and thus extend the circle of these new varieties in each department of culture without subjecting the parties to the heavy expence of procuring or sending by *Express Companies*, as in most cases the charges on small parcels would exceed the value, but the nominal price established by our Government would induce many public-spirited persons to send as a gift to societies and to many individuals these new products at their own cost, and they spread them for the public good.

It is to be regretted that this benefaction of our Government is now most outrageously abused—many persons actually doing the principal part of their *trade through the mails*. Importing Seeds by the hundreds of pounds and then, in small parcels of *four pounds*, passing them through the mails, to their great injury often, where *perishable matter* is thus sent.

The Government do not object to the distribution of *any or all* new products by sample for its *first* introduction to *new districts*, but it feels itself aggrieved and its generosity abused when *several barrels* of potatoes are sent through the mail in small lots, badly packed, and then perishing *en route*, and thus destroying all mail matter surrounding it.

It certainly is to be hoped that all persons who thus send *perishable* matter will enclose in oilcloth all parcels that are likely to cause dampness, and *never abuse* Government liberality by making the *mail bags* like the *steamer* or *railway cars* the medium of *all* their business

The Law establishes the following rates for Seeds, Plants, Cuttings, etc.: For all parcels of four ounces—two cents; the same rate for all above that, and no parcels to be above four pounds weight. Four pounds—32 cents. All parcels to be carefully and securely done up and sealed.

THE LARKIN CONCERT AT SACRAMENTO

These accomplished California Artists, whose skill as Pianists have won them an honorable fame, have received a most flattering card of invitation from the Governor, Senators and Assemblymen, requesting them to give a concert at Sacramento. We learn that this concert will take place during the next week, when every exertion on their part will be made to present a Programme of Music that will be sure to delight the citizens of the Capital City.

It will be remembered that these young Ladies were about to leave our State on a tour East, and to Europe, when a heavy family affliction, the death of a much loved Father changed for a season, the plans of life.

From that period they have not appeared in any public concert, this is the first occasion used by them and we feel assured their true merits as "Californians" and bearing a revered reputation as Artists, will secure for them an audience of which they will justly feel proud.

The Womens Convention, next issue.

WORTH THINKING ABOUT.

Real worth thinking about and acting about too.

We are glad to find in the *Real Estate Circular* of C. D. Carter, Esq., of our City, the following articles. We gladly copy them, so our readers can see that these subjects that we have been for years talking about, are also subjects of notice among all sensible business men.

FACTS FOR CROAKERS.

During the year 1869 we paid the nice little sum of $6,449,000 for *freight alone*, on goods imported here, mostly from the East. This little item speaks loudly against our want of enterprise, for we should, in most instances, be manufacturing the very articles we are importing. Why can't we make soap and candles as well and as cheaply as they do in the East. Why is Eastern butter preferred to California butter? Why do we export hides to have them re-imported in the shape of boots and shoes, instead of manufacturing the articles of wear ourselves? These are questions which we would respectfully submit to the croakers, who, while they are crying out about the dull times in this State, have never invested a single dollar to advance our agricultural or manufacturing interests. Six millions and a half a year saved in actual cash for freights, besides the industries fostered, and the number of persons these industries would employ, would go a long way toward enlivening the State, and especially the real estate market.

THE FENCE LAW.

We have repeatedly called attention in *The Circular*, to the great injustice which the farmers of this State suffer, on account of the unfair requirements of the "Fence Law." It is to be hoped that the attempt to repeal that law, which was unsuccessfully made at the last session of the Legislature, will be renewed this year with a more favorable result. Under the present law the farmer is obliged to spend a large sum of money upon his farm, which neither increases its value, or adds to its income—while all the benefit of the law is reaped by the stock raisers, who, in most instances, do not own any land, and actually depend upon the unfenced lands of the farmer for their pasturage, the poor farmer having no redress whatever. The hardship and injustice of the law not only affects the present farm owners, but must necessarily have a great effect in retarding agriculturists from settling in the State, as the cost of fencing will in most cases amount to $5 an acre. An extra expense that emigrants would be neither willing or able to meet. A repeal of the law should be earnestly demanded.

TIMES IN CALIFORNIA AND ELSEWHERE.

Complaints are frequent among workingmen that times are hard here at present, and work scarce, and there is undoubtedly considerable foundation for these complaints. But the newspapers of all the chief cities of the East abundantly show that times are much worse there than they are here. The rigors of an inhospitable climate are added to the drawbacks of the poor of the Atlantic side at this season, from which troubles we are free. Those who go East at present to escape from the frying-pan of dull times, will find themselves in the fire of much worse ones at their journey's end

FREED'LANDERS BUILDING

While looking at the splendid building of which we have spoken in another column, we could not but reflect how easy it would be for the *Grain Growers* of our State to erect a magnificent and very extensive building, that should vie with any ever yet built, even in Chicago—a building erected for the purpose of a *Warehouse* for the deposit and sale of the grain of our State. The building to be built by the Grain growers, owned and managed by them. This building, and the business, to be under the supervision of one of the most active and intelligent men to be found completely fitted for that post, and to have a salary liberal enough to make it a "Post of Honor;" this agent to have under him all needed aids for the "Head Quarters" of our Grain growers; all sales to be made of Grain both for Export, for Flour Mills, and Home use of all kinds.

This plan we submitted long months ago and we again suggest it, for if our Farmers, our Grain growers, would but unite on such a plan, they could at all times make sales of their Grain at the *highest* rate and realize *all* that it sold for, and their commissions would be reduced to a fraction of the present cost, and all the money needed could be had, and without a "Shylock" interest either.

This plan could and should be adopted, for then our producers would be very greatly aided, and make a great saving annually.

The plan we now propose for the sale of Grain, could be adopted also for the sale of Fruits of all kinds. And here again great saving could be made, and our Fruit growers would realize the *fruit* of their labor, and under this judicious system we should not hear of *Fruit* rotting in the orchards, for it would all be sold and would realize *double* to what the grower now gets.

We call special attention of our Fruit growers to this matter from other States, which is given in another column this week.

THE COMING MUSICAL FESTIVAL.

The coming Grand Musical Festival under the happy management of Mad. Camilla Urso, for the Benefit of the Mercantile Library Association, promises to be a Grand Success. All portions of our State promptly and generously responding, Rail Roads and Steamers promising generous aid in the cause.

As we said in our *first notice* Mad. Urso will earn for herself a Name and Fame that will be worth more to her than wealth, and she will deserve and receive an ovation that will satisfy her highest ambition.

LETTERS AND PARCELS.

We have a lot of Letters to reply to and parcels to acknowlege, that came to late to speak of this number.

SHORT LEASES OF LANDS AN EVIL.

Short leases of farms are a great evil in the State. When the lessee has a lease running only two to five years—and few leases are for a longer period than the latter—they have no interest whatever in taking care of the land, or in erecting decent improvements on it. The short lease system is, in fact, a hand-to-mouth arrangement, and is therefore a slip-shod, wasteful, and most careless one, as well for the lessor as the lessee. The lessee works with the object of taking the most possible out of the land, and does not care if those who succeed him find it a desert. He plows to a depth of but six or eight inches, and harasses and overworks the soil to the utmost. We know that this exhaustive system prevails all over the State, and is practiced by owners as well as lessees. But the latter are the hardest on the land, and it is a noticeable fact that in those districts of the State where leasing has been most prevalent, the yield has become the lightest, and the soil shows most signs of exhaustion. In Napa and Solano counties, for instance, where leasing has been common, many lessees declare that they can now make little or nothing by the cultivation of the land in grain, simply because it has been overworked. Many of them have moved lately to the virgin lands of the San Joaquin valley and other new districts, where, if long leases at reasonable rents are not granted them, they will go through the old vandalic system of land abuse.

Comfortable farm-houses are not anything like as plenty as they should be in California; upon leased land especially they are scarce, and it is no wonder that they are so either. The landlord cares little about his tenant's success, so long as he can meet his rent; while the tenant cares little about his landlord's land. His only object is to squeeze the most possible out of it while it is under his temporary control.

Let long leases be granted, with stipulations in them that a certain rotation of crops shall be adopted; that something shall be done to fertilize the land, and that deeper plowing shall be practiced. If this is done, the fertility of our land will be maintained, and it will be better cared for in every way, while lessees will be encouraged to make permanent improvements, to erect comfortable homes, and to plant trees, fruits, etc., from which no crops are reaped for two to six years and which, because of short leases, are now never planted by tenants at all. Thus the land will be improved, the landscape beautified, and a mutual interest awakened between landlord and tenant.

INSURANCE.

Reports of great and disastrous fires in many parts of the world, should remind our citizens all over the State that one of the first duties to themselves and their families is to be protected at every point by a *Real Insurance Policy*, so that in case of any great calamity in our Cities or towns in the country, no person need be made Houseless or penniless when fire comes.

By the Reports of the several leading Insurance Companies of our City, none stand more prominently safe and sound than the Pacific Insurance Company of this City. A full paid up capital and large amount and a large surplus capital also.

A Policy in this Company is beyond question safe, and in this Company there is so much Capital and Stockholders property also holden, that loss is impossible to a Policy holder.

Let therefore no one run any risk of fire by sea or by land. The Officers are men of business, their rates are the lowest and their General Agent H. H. Bigelow, one of the best Insurance men in our State.

PROTESTANT ORPHAN ASSYLUM

The Annual Meeting of this Noble Society was held in Platt's Hall, on Wednesday Evening, and was one of the most interesting meetings of the kind we have attended for a long time. The Hall was densely filled. Some 200 pupils were present with their teachers and Board of Managers.

The whole series of Exercises were deeply interesting, and the Examination of the Pupils, from the little one of a three-summer life, to those of 12 or 14, reflected the very highest credit upon all who have given their *heart work* to it; and as we looked upon these young Orphans, their free from care and danger, and the wise protection they enjoy, and contrasted them with thousands of children now loose on our streets who *have Parents*, we really felt *these children* there cared for were happiest, purest and best, and gave promise of being better citizens hereafter than those we have named, who are not *orphans*.

The proficiency of these Pupils in singing, recitations and calisthenics, was an evidence of faithful teaching and care, and we felt rejoiced that the *Orphans* of our City are thus provided for. They are indeed cared for and Blessed.

A NEW MAP.

A new Map of San Francisco Bay and its surroundings has been published under the auspices of the "Geological Board of Survey." It is undoubtedly one of the best and most correct maps yet sent forth to the public.

The map takes in the surrounding country on the North and West as far as Petaluma and Sonoma districts; on the North and East, as Vacaville, Maine Prairie, Denverton, Rio Vista, etc.; on the East, all the Contra region, the Livermore Valley, thence down to San Jose and the Santa Clara region and thence up to San Francisco—embracing the rich and cultivated region around our Emporium city.

The style and finish of this map is excellent, and will be of great value to the citizens within all this region especially.

Mr. E. M. Sleeter has been appointed to canvass the region thus named, and we commend this map to a just consideration as worthy a place in the library of every family in these counties.

Acknowledgements

Articles Received at the California Farmer Exhibition Rooms, No. 320 Clay Street.

A Valuable Guide.

We have No. 3 of the *Monthly Guide*, issued by he Publishing House of H. H. Bancroft & Co. of our City.

This Guide will be found of very great use to the traveler, as it furnishes a complete history of all the routes of Railway, Steam Navigation, or Stage, in our Pacific States; gives a correct Table of Distances, Modes of Travel, Fares, and also a brief description of Cities, Towns, Villages, the most noted Places of Resort, Scenery, etc., and with many valuable Maps, by which a comprehensive insight can be had of *how, when, and where to go*, and how much it will cost, together with many other tables, all valuable to the traveler and tourist, and all this combined in a very neat little book, costing only 25 cents.

State Agricultural Society.

We have received the *Annual Report* of the Board of Agriculture, made to the Governor. It is quite a lengthy report, presenting what purports to be the Doings of the Board, and the Receipts and Expenditures in gross. We supposed the *Law* required a *detailed* report of its Receipts and Expenditures. We gave a casual glance at a portion of it, and find, we believe, some serious errors, of which we shall speak in our next issue.

We hope our Chief Magistrate will give this matter a serious examination, for if our State gives its means those means should be wisely expended.

Another Chapter on Rail.

This is a book giving a History of this world-exciting Rail Road, with a map of its route, and all its branches, and a History of some of its mysterious litigations. Published by Geo. Crouch, New York.

The Galaxy.

A highly interesting and successful Magazine, published by Sheldon & Co. of New York. A Magazine that has a very large circulation, and very popular.

"WAIT FOR THE WAGON."

This merry Song is familiar to all the Sons of Song on our Farms and among our Rural population, but just now we have a *new version of it*—not *Wait* for the Wagon, but *Run* for the Wagon, and *Buy the Wagon*. Yes, Buy the Wagon, the *best* Wagon, the *strongest* Wagon, the *cheapest* Wagon, and the *most useful* Wagon ever yet known among a farming population.

Then, Farmer, go "Buy the Wagons" of Arthur & Sons—shown in our columns, in their new card this week. They are now selling them rapidly.—Everybody Examines them, and Buys them in preference to any other Wagon ever yet offered.

Rain Down South.

Up to the present time there has been but little rain fallen upon the lands in our Southern Counties. This will generally be the case where large and widely extended lands remain uncultivated, when these waste places shall have had the soil often turned up to kiss the sun, it will draw up these kisses of the earth as honey and return it as honey dew again, in gentle or copious showers, the wider the area of well cultivated Fields Orchards and Vineyards extend, the more rains, are always had in that region.

RARE FLOWER SEEDS

We have several fine collections of new and choice Flower Seeds from the well known Florists, "Dreer" of Philadelphia, and James Vick of Rochester N Y. Those who wish "Gems in Flora," will find them at our Office, No. 320 Clay Street.

Jackson Michigan WAGONS.

The subscribers are now in receipt of a large and full assortment of the above WAGONS.

ONE HUNDRED

Iron Axel, size 1½-2-2½-2¾-

Shell Skein, " 3½-3¾-4-inch.

The JACKSON WAGONS have been sold by us for years, and with increased reputation.

The MANUFACTORY being one of the LARGEST in the United States—are enabled to keep a stock of TIMBER seasoning for years, the low cost of which, makes it no inducement to work in any imperfect material.

These WAGONS are the best and cheapest FARM and TEAM Wagons ever sold in this Market—can be used as HEADER WAGONS.

We will guarantee them to stand in any climate.

ALSO—FOR SALE

The SEYMOUR and MORGAN, or NEW YORK REAPER, which has stood the test for twelve years—the Strongest and Best Reaper in use.

—ALSO—

PLOWS of all kinds. CULTIVATORS—HOES RAKES—HARROWS, Etc., Etc., all of which will be sold at reduced prices.

J. D. ARTHUR & SON, Sole Agents.
3-tf. Cor. California & Davis Sts.

TYPE FOR SALE.

The Type which now prints the FARMER will be offered for sale, as we intend to print on NEW CALIFORNIA TYPE.

The quality of the Type can be seen by reading the FARMER. Any one wishing a good bargain can have one by calling at once at our office, or addressing EDITOR FARMER.

Miscellaneous

OIL CAKE MEAL!

THE BEST FEE KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal, and in the United States Government Report of the Department of Agriculture for 1855, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent; Barley Meal, 13 per cent; Oat Meal, 18 per cent; Oil Cake Meal, 31 per cent. For life-sustaining properties to all stock [illegible] to sudden changes of weather or over-driving [illegible] to equal

For MILCH COWS [illegible] particularly valuable, increasing the quantity of milk and enriching its quality to a far greater extent than any feed known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food; generally mixed with the mash of bran, slops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair.

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($35 per ton,) it is the cheapest feed in market. It is now selling in New York at $42 per ton, gold, at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

NOS 3 AND 5 FRONT STREET,
3316 San Francisco.

TRUE'S IMPROVED POTATO PLANTER.

This is, undoubtedly, one o the most valuable Machines adapted to Agricultural purposes ever introduced

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such sized slices as the farmer may prefer; drops these pieces with the most perfect regularity, and covers them perfectly, and does all this as fast as a horse can walk over any ground that can be plowed.

No intelligent farmer can fail to see that an implement with which one man can, with the aid of a horse plant six acres of potatoes in a day, is of inestimable value; because the days in which PLANTING can properly be done are very few, while he has all SUMMER and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attending to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor-Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune with it.

Particulars and Catalogues can be had at our office.

WARREN & CO.,
320 Clay street, up stairs.

Fine Wool Sheep

3000
VERY SUPERIOR
FINE WOOL SHEEP

Of French Merino and Spanish full blood Breeders—The Stock on the French side is from the famed "Chrystal Palace," one of the finest Bucks ever brought to this Coast.

The Spanish from full blood of the best Pedigree.

The Sheep will be sold in lots of 500 or 1000, to suit purchasers, and will be sold at a great Bargain.

All particulars can be had at the Farmer Office, where Prices will be made known.

Should now make them known extensively, and in no way can they do it more effectually than by

ADVERTISING IN THE FARMER,

As we are now sending to thousands of readers in the other States, as well as at Home, our Journal, the advertisements appearing in our columns will be read in all the principal Merchant's Exchanges in the Eastern States and Europe, as well in the best private Reading Rooms and Libraries of the United States.

Advertisers will be wise that consult our columns.

One thing is certain:—No disreputable Advertisements can appear in our Journal. 38 1

EARLY ROSE POTATOES.

A Splendid lot of these,

Best of all Early Potatoes,

And raised here in California can be had at the

New York Prices.

We invite all Potatoe growers to call and see them at our office, where we can show them a sufficient number of testimonials as to their Quality and Productiveness to convince all that the Early Rose is the very

BEST EARLY POTATOE KNOWN

One of the grand features of this wonderful Potatoe is that it succeeds most admirably in high, dry lands—Some grand results we have here in reports now to be published.

Those who want Pure Seed of California growth, and at New York rates or what it would cost to bring them here, can have larger, fairer and fresher Seed than any that can be imported.

For Sale at FARMER OFFICE,
320 Clay Street, San Francisco.

IMPORTANT

....TO....

Nurserymen, Gardeners and Amateur Florists.

We beg to announce the arrival of the choicest and best assorted collection of

Rare Seeds

ever received on this Coast. They have been selected with the greatest care, from the first houses in Europe, and are comprized of

EVERGREEN, AND DECIDUOUS TREES AND SHRUBS, RARE AND BEAUTIFUL PERENNIALS, BIENNIALS, ANNUALS, ETC,

Also, new and choice Vegetables; the assortment is worthy the attention of all who admire the beautiful; and also the particular attention of gardeners who are anxious to secure something rare and new in the Vegetable kingdom.

We shall send them out in small parcels or individual packets, so that many may have the chance of securing the collection. Orders executed in rotation, and carefully packed for mailing any distance.

Persons remitting us Five Dollars, will have collections of Seeds sent them, worth intrinsically double the amount.

To persons of general information, and of active habits and courteous manners, a very liberal salary can be earned.

None need apply who cannot bring undoubted references. Apply to

MORTON MARMON.

Miscellaneous.

NEW AGRICULTURAL BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz.: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS in those parts needing such illustration, so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

F TROWBRIDGE.
Milford, Conn.

TO THE WORKING CLASS.—We are now prepared to furnish all classes with constant employment at home, the whole of the time or for the spare moments. Business new, light and profitable. Persons of either sex easily earn from 50c, to $5 per evening, and a proportional sum by devoting their whole time to the business. Boys and girls earn nearly as much as men. That all who see this notice may send their address and test the business, we make this unparalleled offer: To such as are not well satisfied, we will send $1 to pay for the trouble of writing. Full particulars, a valuable sample, which will do to commence work on, and a copy of "The People's Literary Companion"—one of the largest and best family newspapers published—all sent free by mail. Reader, if you want permanent, profitable work, address E. C. ALLEN & CO., Augusta, Maine. 32 13

Large Elm and Mulberry Trees.

Those who desire to secure Superior Sized SHADE TREES of either the ELM or ASH, should call and look at the samples we have on sale.

The MULBERRY also will grow to a large tree, and is a fine Summer shade tree, with its large spreading foliage.

For either of these kinds, apply at the

FARMER OFFICE,
32-24 320 Clay street.

ITALIAN CHESTNUTS.

We have them put up in Packages of One Dollar each, Mailed free to purchasers.

WARREN & Co., Farmer Office,
320 Clay Stree

Advertising Abroad!

WE CALL THE SPECIAL ATTENTION OF ALL Manufacturers, Agricultural Men, Nurserymen, Booksellers, and others having interests connected with the Pacific Coast, that now is the time to secure the business of this region by wisely ADVERTISING WITH US.

The full effects of the completion of that Grandest of all Human Enterprises, the Pacific Railroad, must open a large and wonderfully increased business between the Eastern States and the Pacific Coast, and they who wisely advertise now, will be the first to secure it, and when once secured, they can hold on to it.

We therefore invite all those who have valuable Implements, Manufactures, Inventions, Books, Paintings, etc. to the Columns of the California Farmer, that will give them a wider circulation than any other medium they can adopt.

WARREN & CO., Eds. and Prop'rs.

Home Miscellany.

DON'T STAY LATE TONIGHT.

The hearth of home is beaming
With rays of rosy light;
And lovely eyes are gleaming,
As falls the shades of night;
And while thy steps are leaving
The circle pure and bright,
A tender voice, half grieving,
Says, "Don't stay late tonight."

The world in which thou movest
Is busy, brave, and wide;
The world of her thou lovest
Is on the ingle side.
She waits for thy warm greeting;
Thy smile is her delight;
Her gentle voice entreating,
Says, "Don't stay late tonight."

The world is cold, inhuman.
Will spurn thee in thy fall;
The love of one pure woman
Outlasts and shames them all.
Thy children will cling around thee,
Let fate be dark or bright;
At home no shaft will wound thee;
Then, "Don't stay late tonight."

THE TIN-BUCKET AND WILLOW-BASKET BRIGADES.

BY ROBERT H. THOMPSON.

Have you seen as I have seen in the early morning gray,
Ere the sunbeams kissed the mountain tops, the workman on his way
To his busy scenes of labor, armed with trowel or with spade?
He's one of Heaven's nobility, and belongs to the brigade.

While the merchant in his palace in dreams gloats o'er his gold,
While the loafer in the market house lies slumbering in the cold,
Our hero with his bucket bright goes whistling to his trade:
God bless him, and all noble men who belong to the brigade.

Then in the early morning gray, when laggards lie in bed,
The maid with basket on her arm goes forth to earn her bread;
Her modest mien commands respect, though in calico arrayed—
What a noble wife she'll make for him who belongs to to the brigade.

God bless the honest sons of toil, who with the lark arise,
And hasten to their labor, ere the sun illumes the skies;
God bless the modest maidens fair, who ply their daily trade—
If I were searching for a wife, 'twould be in this brigade.

OUR PLATFORM.

God has so created and related Man to Life on Earth, that—casualties aside—in order to live free from Sickness and die of Old Age, he needs only to understand and obey the Laws upon which Life and Health depend. Therefore as Christians, as well as advocates of a new Medical Philosophy we insist

1. That Sickness is no more necessary than Sin.

2. That the gospel demands that Human beings should live healthfully as well as righteously.

3. That within the sphere in which they are designed to operate, Physical Laws are as sacred as Moral Laws are, and that mankind are truly bound to obey them.

4. That obedience to Physical Laws would do away with Disease, and that instead of dying of an uncountable number of ailments, which smite them all along from infancy to mature manhood, —casualties aside—persons would die of Old Age.

5. That in order to be cured of any disease—no matter what—one needs simply to be brought within the range of operation of the Laws of his Organism, and to be so related to them that they can work unobstructedly, and he cannot fail to get well.

6. That, therefore, the only sound philosophy upon which to proceed to treat the Sick with a view to their restoration to Health, is to employ such means and such only as had they been properly used would have kept them from getting sick.

7. That the right to use one's powers and faculties neither originates in nor depends upon sex, but upon the possession of an intellectual and moral nature, and inasmuch as woman possesses this as truly as man does, her right to use whatever powers and faculties belong to her is equal with man's.

8. Hence we advocate such reformation in our Government as will place woman in all respects on an equality with man before the law.

Such are our Principles and we respectfully commend them to the candid consideration of the People, and entreat the Wise and Good to assist us in their promulgation.

"Home on the Hill Side."
Dansville College, N. Y.

Tom Thumb has brought suit against the Adams Express Company to recover the value of a quantity of photographs lost in transportation.

Probably the reason of their loss was, Tommy's Photographs were so small.

MY WIFE'S NEW DISPENSATION.

BY A GENTLEMAN OF THE OLD SCHOOL.

My wife and I have lived together a greater number of years than many people live at all in this world. We are old people. The shadows of life we dwell in now. No matter at what time of the day the sun shines, if we walk out we cast long shadows. We are on the downhill slope, going down slowly, because we take life easy.

But a curious thing has occured with a little time with my wife. She has been brought into a new dispensation. All her life long until latterly, she has been conservative—careful in her views and very discreet in her bearing, manners and conduct—never catching or clutching at new things. The old paths have always seemed smiled to her feet. She had trodden them so many years that she knew the uneven and rugged as well as the smooth and level places in them. But the pestiferous "Woman Question," which proposes to reconstruct all the social relations of mankind, having got up to the surface somehow and secured a hearing, has got hold of her. She has read Susan B. Anthony's Revolution and now is ready to swear by it and walk the up and down paths of life for the little while remaining, lightened by its brilliancy and warmed by its glow.

It is something new for me to find my conservative wife out-radicalizing me altogether. I have always been a radical. I never wanted to preserve hardly anything, because from my point of view I never saw much that was worth preserving. I have always labored to tear down things. Not maliciously, not to gratify my destructiveness, but to gratify my constructiveness. I wanted rubbish removed, and quicksand out of the way until society could touch solid rock, whereon it could build superstructures which, when the winds should blow and the floods should come, would stand, because they were founded on a rock. I wanted society should become Christianized; and hence I have labored and prayed to induce my fellow men to accept the sayings of Jesus Christ and regulate their lives by them.

I have had to be patient with my companion, and it seems so strange to me that now, in her old age, the Spirit of the Lord, through the "Woman Question," should come upon her, and she should be ready, either by day or by night, to prophesy and to speak with the gift of tongues. Heretofore she has always been so untalkative, reticent lady. Now, she will talk from morning until night upon the cruelties of men, the necessity of re-organizing society, the corruptions of politics, the extravagance of government, the want of spirituality in the church, the unhappiness of the married relation, and many other kindred topics. I sit in my arm chair and look at her and wonder if she is not renewing her youth like the eagle's, so that hereafter she is to run and not be weary, walk and not faint. But I have my little pleasantries with her. She has not only become radical in her ideas, but she has become quite as much so in her activities. The ballot, to her, is the cynosure to strength and greatness. She talks about the ballot. She constructs ballads about the ballot and sings them when asleep; and I should not wonder, if the truth could be got at, if she carries her idealisms about the ballot into her closet exercises. For it seems to me that every thing she does is done with an impression upon her mind that by the doing of it she is helping to bring about the day when, if she does not live to enjoy it, other women will exercise the privilege of voting. So, as I said, I have my little pleasantries with her. She is trying to learn to do a great many things that she never knew how to do before. I see her attempting to be self helpful.—Whereas formerly she would ask me to drive a nail, she gets the hammer and tries to drive it herself. Whereas formerly she would ask me to whittle a bit of pine to make the fire, or mend the broken pail-bail, or fix a hen coop, or dig a hole in the lawn for a flower bulb, she now does it herself. And as she is very awkward about it, but, will not let me do it for her, I have nothing left but to say,—"Now if you only had the ballot, you would be all right." And sometimes she looks gay, and at other times she looks grave and says, "That is just exactly what I believe. The ballot will do more for woman than every other instrumentality in this country." It does no good to argue with her, she will quote "the Revolution," and that is the upshot of all argument with her

Sometimes I try in a pleasant way to make her see that the ballot in the hands of men has not worked such wonders. But the answer to that is men are not women, never were and never will be. The salvatory power to human kind, she says, is organized into, and therefore must be drawn out of the womanhood of mankind. I am rather, on the whole, delighted to find myself having so bold and so brave a leader, and take the position of the leader with great satisfaction. can lie abed in the morning and have no care about the management of home affairs. Do not have to look after even the necessary funds wherewith to meet the family expenses She is up and active and energetic and while she makes a good many blunders, she really, on the whole, has put out immense resource and power that I never dreamed she possessed. So I take matters very lovingly and quietly, thinking that if an old woman like her can be so revived and made energetic by a great idea and a new revelation, what may we not expect of the girls of the rising generation when they, having become twenty-one years old, shall feel this divine afflatus and be inspired to self-help, self-maintenance and self-government.

BE KIND.

A reverend gentleman in the Allord district, Scotland, who habitually exercises a kindness to birds and animals, receives a daily visit from a robin red-breast. The other day, the bird, as usual, entered his apartment, hopped on to a book in which he was writing, and seized hold of his pen, holding it till writing had to be given up, and some attention paid to the little visitor.

A PLEA FOR THE LITTLE FOLKS.

Don't expect too much of them; it has taken forty years, it may be, to make you what you are, with all their lessons of experience; and I will dare say you are a faulty being at best. Above all, don't expect judgment in a child, or patience under trials. Sympathize in the mistakes and troubles, don't ridicule them.

Remember not to measure a child's trials by our standard. "As one whom his mother comforteth," said the inspired writer, and beautifully does he convey to us the deep, faithful love that ought to be found in every woman's heart, the unfailing sympathy with all her children's griefs. When I see children going to their father for comfort, I am sure there is something wrong with their mother.

Let the memories of their childhood be as bright as you can make them. Grant them every innocent pleasure in your power. We have often felt our temper rise to see how carelessly their plans were thwarted by older persons, when a little trouble on their part would have given the child pleasure, the memory of which would last a lifetime.

Lastly, don't think a child hopeless because it betrays some very bad habits. We have known children that seemed to have been born thieves and liars, so early did they display these undesirable traits, yet we have lived to see those same children become noble men and women, and ornaments to society. We must confess they had wise, affectionate parents. And whatever else you may be compelled to deny your child by your circumstances in life, give it what it most values —plenty of love.

HOW TO TREAT THE SICK WITHOUT MEDICINE

Mrs. Barclay, the distinguished health lecturer says, "Just the one article on drunkenness in the book, 'How to Treat the Sick without Medicine,' I regard as the greatest production on the subject ever written. Dr. Jackson has, in my opinion, immortalized himself by it."

Mrs. Everett also, so favorably known to the public as a successful lecturer, says, "The beauty of the work is in its tendency to inspire the reader with the determination to get well, and a belief that the beautiful, symmetrical life herein depicted is the only one worth struggling for.—Dr. Jackson has evidently put some of his magnetism into the volume."

We very often receive from those who have purchased the book and put its teaching in practice, assurances of its great value to them on account of its availability in home practice. Every mother who does not want to give her children medicines when they get sick, should have this book. Its value in the family cannot be over estimated. It contains over 500 pages, and costs, sent by mail, $3 25. Very liberal allowances made to agents.

We copy this notice from the *Law of Life*, and we endorse every word of it, this Book should be in every family. Send to Dansville, N. Y., for the book.

A WOMAN'S SERMON.

Dear friends, there are three things I very much wonder at. The first is, that children should be so foolish as to throw up stones and brickbats and clubs into fruit-trees, to knock down the fruit; if they would let it alone, it would fall itself.—The second is, that men should be so foolish and even so wicked as to go to war and kill one another; if they would only let each other alone, they would die of themselves. And the third and last thing I wonder at is, that young men should be so unwise as to go after the young women; if they would only stay at home, the young women would come after them.—[And we guess she is right, in the last at least.—Ed.]

THE ARTS.

BRONZING PORCELAIN.—Böttger gives a simple process for bronzing porcelain, stonewares, and composition picture frames, which consists in covering the articles with a thin solution of waterglass, applied with a soft brush, and then sprinkling the surface with bronze powder. The article is next heated, and when the silicate of soda or water glass is dry the bronze will become firmly attached, and may then be polished or burnished with agate tools.

7 1 No. 205 Montgomery street, San Francisco.

Miscellany.

ANIMALCULE.

If some hay is placed in a glass of pure rain water, and allowed to soak for a few days in a sunny place, and if it be then removed, the water will be found, under a powerful microscope, to contain many very small moving things, which are called infusoria, from their being produced after infusing the hay. The eggs which were on the hay bred there myriads of small things, which often have a very beautiful coat of transparent flint or silica. If the water is kept clean, and is not allowed to decompose or smell, generation after generation of the infusoria live, die and fall to the bottom of the glass. They form a very delicate film there, and minute portions of it, when examined under a high magnifying power, show the siliceous skeletons or shells very distinctly.

Now, many strata in the earth are formed entirely of the remains of infusoria, and a very familiar example is the Tripoli powder from the polishing slate of Bilin, in Bohemia. A single grain of Tripoli powder contains no fewer than 187,000,000 of the transparent flinty skeletons of dead animalcules; yet the layers of earth which are made of them at Bilin extend for miles. In the harbor of Wismar, in the Baltic, they increase and multiply at a great rate, for 17,496 cubic feet of mud, are formed every year there, and every grain of it contains 1,000,000,000 of the beautiful siliceous remains of the infusoria. In the Island of Barbadoes there is a thick mass of the most beautiful flinty sea animalcules, and they are in such numbers that it must be supposed the dead minute things were constantly falling in showers from the sea to the bottom.

A Pack of Troubles.

A locomotive scared a Massachusetts horse to such an extent that he bolted overboard into a pond among the cakes of ice. A Boston Philanthropist, passing that way, strove to extricate the reckless beast, and tumbled in himself; several bystanders formed a line stretching to the brink of the ice, effected a connection with the struggling youth, and undertook to drag him out, but his weight proved too much for their aggregate friction, and the whole party slid off, and disappeared beneath the flowing wave. The horse, at this period of the melee, put his foot in the pocket of the benevolent Bostonian, completely carrying away the receptacle, and adding to the consternation which ruled the scene. As soon as the bystanders could control themselves they formed a longer and stronger line, and the entire party was safely rescued, the horse silently and composedly bringing up the rear.

The Road to Ruin.

Gambling.—To every young man who indulges in the least form of gambling, I raise a warning voice. Under the specious name of amusement, you are laying the foundation of gambling. It is the light wind that brings the storm. It is the white frost which prelude the winter. You mistaken, however, in supposing that it is harmless. Its terrible blight belongs, doubtless, to a later stage; but its consumption of time, its destruction of industry, its distaste for the calmer pleasures of life, belong to the very beginning. You will begin to play with every generous emotion.—Amusement will be the plea. At the beginning the game will excite enthusiasm, pride and skill, the love of mastery, and love of money. The love of money, at first almost imperceptible, will rule out all the rest—like Aaron's rod—a serpent.—Generosity, enthusiasm, pride of skill, love of mastery, will be absorbed in one mighty feeling—the savage lust of lucre.—*Butcher.*

CLIPPINGS.

A Connecticut paper reports that Decius Lattimer, who lives in Simsbury, has a shepherd dog which acts as newspaper carrier. The paper is thrown off from the train by the baggage master, at the crossing, and the dog never fails to be on hand to take it and carry it to his master's house. Ten trains a day pass this point, but it is only when the right train comes that he scampers down to the track and receives his daily newspaper.

A knowing dog that; wonder if he will know when "George Francis Train" comes?

Since 1807 a family of owls have occupied an old Sycamore tree, near Burlington, N. J. They have been protected by the owner of the land on which it stands, and each night at dark the paternal owl pays a visit to his benefactor, perching himself on a tree near the house, and giving forth melodious notes of gratitude.

An owl'd bird that.

At a meeting of the Social Science Association, in Albany, N. Y., the following statement was made: "In New York alone, $32,000,000 worth of meat annually is consumed, besides 3,000,000 pounds of butter, valued at $33,000,000; 72,000,000, pounds of cheese, valued at $14,000,000—a total of $79,000,000.

Thirsty individuals in New Bedford, Mass., are compelled to knock at seven doors seven times before they can obtain admission to an attic where the prohibited liquor is sold.

Probably they think they should be forgiven for their sin of drinking, as they have repeated seven times seven.

The Superintendent of Street Cleaning, in New York, in his Annual Report, says that the sums heretofore paid are insufficient, and that $1,000,000 per annum is necessary for a thorough work.

Not so in good old Boston; there they make money by keeping the streets clean.

The sale of pews for Beecher's church, last Tuesday evening, realized $57,000; a considerable increase over last year.

New Advertisements.

MERCHANTS'

GARGLING OIL

IS THE

BEST LINIMENT

IN THE WORLD

FOR MAN AND BEAST.

36 Years in Use.

Q

Is good for Rheumatism, Chilblains, Corns, Whitlows, Caked Breasts, Sore Nipples, Cramps, Colts, Bites of Animals Weakness of the Joints, Contractions of the Muscles, Burns and Scalds, Frost Bites, Painful Nervous Affections, Chapped Hands, Lame side Pain in the Side, Swellings, Tumors, Tooth Ache, Old Sores, Hemorrhoids or Piles, Flesh wounds, Galls of all kinds

P

Sprains, Bruises, Cracked Heels, Ring Bone, Poll evil, Wind galls, Callous, Spavin, Sweeney, Fistula, Stifast, External Poisons, Scratches or Grease, Springhalt, Sand Cracks, Lame ness, Strains, Founded Foot, Mange, Horn Distempers, Garget in Cows, Cracked Teats, Foot Rot in Sheep, and many other diseases incident to Man and Beast.

R

R. D. Taylor, of Concord, Ky., says the Gargling Oil cured a horse of his, injured while plowing by attempting to step over a stump, almost severing the thigh from the body; also that he has used it in his family for fifteen years, and is the best remedy for Cuts, Burns, Bruises, Frost Bites, Strains, Rheumatism, etc., he ever used.

G

From Crump & Bros., Lochrane Landing, Ohio, Nov. 29th, 1856—We are pleased with your medicines. It has been the means of curing a great number of different diseases upon persons, as also upon horses. We think it cures all you recommend it to do. We want you to send us the larger proportion of the variety for "Family Use," in small bottles.

L

From Dr. J. P. Terrell, Warren, Ind., March 3d, 1856—I am engaged in the practice of medicine, and find your Gargling Oil an extremely efficient remedy in all cases where an external application is indicated.

From Dr. G. B. Neal, Burris, Iowa, 1855—I have practiced medicine in this county seventy years, and cheerfully recommend your Gargling Oil as the best liniment in use.

E

From Dr. T. W. Ellis, Troupville Ga., Jan. 5th, 1856—If I could receive both boxes of the Gargling Oil it would not be too much, as I think I could soon find sale for it all, the inquiry being frequent since it is supposed that I have it for sale

From Dr. Wm S McCall, Chamois, Mo., Mar. 9th, 1859—Your Gargling Oil is taking the shine off from all liniments of the day. If you desired them I could procure dozens of certificates from the best citizens of the county.

N

Messrs McLain & Bros., Wholesale Druggists, Wheeling Va., say, under date of July 24th, 1858 that they can safely recommend the Gargling Oil for more diseases than it is recommended for.

From J. R. Fisher, Uniontown, Pa., June 31st, 1857—Your Gargling Oil is doing much better here than formerly, since its virtues have become known—and the bottles put up for Family Use, without Stain, are much sought for.

Q

Extract of a letter from Hon. Nathan Lindsey, County Judge of Shelby county, Iowa, dated Harlan, April 18th, 1857, It is decidedly preferred to any other liniment sold in this section.

Extract of a letter from Samuel S. Hupp, dated Fallsburg, Ohio, July 17th, 1856—In June last, Henry Baffle had a yearling colt that had what was supposed to be Diphtheria, for more than ten days, so that it could not eat, and the throat swollen almost shut, and by the use of three or four applications of the dollar bottles, did the desired effect.

From A. G. Nial, Lewisville, Cochocton county, Iowa, March 1856—I have used your Gargling Oil for the scratches on my horse, and it cured it with the first application

O

From Enos Mather, Middleport, N. Y., July 23d, 1856—I purchased a bottle of your Gargling Oil of your Agent, A. S. Baker, at Middleport, and as yet have used but half of it. I think it has given me more relief in a case of severe rheumatism of long standing, than anything I have ever used before.

M

Extract of a letter from J. O. Pratt, dated Quincy, Chautauque county, N. Y., August 12, 1854—I have been acquainted with your medicine, (Gargling Oil) for the last fourteen years. It has proved to be a sure cure for Foot Rot in Sheep, for which I have sold the last bottle, and have calls almost daily for more. Please forward as soon as convenient.

T

Always enquire for MERCHANTS' CELEBRATED GARGLING OIL, and take no other.

Retail price, $1 00, 50 cents, and 25 cents.

Shake well before using, and rub on thoroughly before the fire or some warm substance.

The Gargling Oil has been used as a liniment for thirty six years. All we ask is a fair TRIAL, but be sure and follow the directions.

Ask your nearest druggist or dealer in Patent Medicines for one of our Almanacs and Vade Mecums, and read what the people say about the Oil.

The Gargling Oil is for sale by all respectable dealers throughout the United States and other countries.

Our testimonials date from 1833 to 1863, and are unsolicited Use the Gargling Oil and tell your neighbors what good it has done.

We deal fair and liberal with all and defy contradic

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attaches to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Comb, or Gum;

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the antifriction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

Hck&Lbt

Is on the red cover of the packages

Railroad Lands.

CENTRAL PACIFIC RAILROAD,
LAND DEPARTMENT.

Sacramento, March 1st, 1867.

The following statement is made for the information of those who desire to purchase Lands from said Company:

1st. Congress has granted to the Company, all the alternate sections of the public lands designated by odd numbers, within a distance of 20 miles on each side of the railroad;—excepting lands to which a pre-emption or homestead claim had attached prior to the 12th of September, 1862; and excepting lands reserved by the United States as mineral.

2d. The Company has no interest in even sections. To constitute a valid pre-emption or homestead claim within the above exception, the party must have resided on the land prior to September 12th, 1862, and continuously since that time. He must also on that day have been over twenty-one years of age and be the head of a family and have filed his claim in the United States Land Office within the time required by law. If he has not these requisites, or has neglected to file, he will have to buy of the Railroad Company.

3d. All persons who desire to purchase lands from the Railroad Company, including settlers, pre emptors, and other claimants, should make application to the Land Agent, B. B. Redding, at the Land Office of the Company, in Sacramento, either personally or by letter, describing the lands by legal subdivisions. This application will be filed and the party will be allowed three months to complete the purchase, and during this time the land will not be sold to another without giving such applicant thirty days previous notice. If the purchase is not completed within three months, the land will be open to purchase by others.

4th. Persons who have valid pre-emption or homestead claims to any tract on an odd numbered section, can purchase the same from the Railroad Company at the Government price of $1.25 per acre in greenbacks, and upon the usual credit of five years if they so desire, by filing an abandonment of their claim in the U. S. Land Office, blanks for which will be furnished by the Land Agent of the Company. Such purchase from the Company has these advantages over a purchase from the Government: The party can leave the land if necessary—he can sell or mortgage it—he is saved the payment of lawyers' fees and expenses of witnesses to go to the Land Office to "prove up" his claim—he can get his title perfected in less time—and he can buy on credit at a low rate of interest.

5th. Actual occupants of lands belonging to the Company, will generally have a preference in the purchase at the regular price. No addition to the price is made where there are improvements on the land made by the settler. Where there are conflicting claimants who apply to purchase, an adjudication of their respective claims will be made by the Land Agent, upon due notice given to both parties.

6th. No lands are sold by the Company or the Government, until after they have been surveyed and the plats returned to the Land Office.

7th. The Company sells ordinary agricultural lands at $2 50 per acre, in gold (except sales to pre-emptors as above). Timber lands, lands in the immediate vicinity of the railroad, and tracts having special value above ordinary farming lands, will be sold at prices and on terms fixed by the Board of Directors.

8th. Persons desiring to do so can buy on a credit of five years by paying twenty per cent. of the price down, and interest annually in advance on the remainder at ten per cent. per annum. Thus a purchaser of one hundred and sixty acres at $2 50, which amounts to four hundred dollars, will pay twenty per cent., or eighty dollars, with interest on three hundred and twenty dollars, which is thirty-two dollars—in all one hundred and twelve dollars, paying each year thereafter thirty-two dollars interest, and the three hundred and twenty dollars at the end of five years. his three hundred and twenty dollars can be paid at any time within the five years, but not by installments, and the purchaser will then be immediately entitled to a deed

9th. Applications to purchase lands can be filed in the Land Office of the Company at any time after the same have been surveyed by the Government; but no applications will be acted upon until three months after the maps have been filed in the United States Land Office. Occupants of the railroad lands who desire to purchase should therefore be prompt in filing their applications in the office of the Company within this time. Blank applications will be furnished to all who desire to purchase. No sales will be made except by legal subdivisions according to Government surveys. Purchasers can buy as large an amount of land as they may wish.

10th. No sales are made by the Company until the land is listed over to it by United States Land Officers. Purchasers are thus assured that the title they obtain is perfect.

B. B. REDDING,
Land Agent C. P. R. R. Co., Sacramento.

Corrected Weekly, by Enoch Pardee.]

San Francisco, Feb. 3d.

GRAIN AND FLOUR MARKET.

From all parts of our own country and from Europe we have accounts of an abundance of Breadstuffs, and the low price of Wheat and Flour. New York and Chicago quote the lowest rates for many years, and the Liverpool quotations have not been so low for many years. The Telegraph gives Wheat at only 9s, which at the present and unprecedented low price of Freight, that too, lower than ever before known here will not allow a margin of profit to any export to Europe, and the consequences there are no orders, while the grain still accumulates in the Warehouses and at landings, and much wheat that was kept back for a rise, now shows itself. In addition to this the desire to sell, on the part of those who were among the "hold on'rs," is now frustrated by the low state of the rivers. This desire to sell now before the new harvest, shows that we have a much larger surplus than was anticipated, hence a lower rate must yet be had.

How unfortunate for this State is it that so much Grain has been kept on hand, its value now in Gold would have been a great relief to our State in its present depression.

When will our Farmers learn that there is but one sure and safe course, and that is to "SELL AT HARVEST."

The large amount of poor grain the past year, grain that was raised upon *worn out land*, land half plowed, sown late, or poor seed, has also injured the general prospects, by giving a much less return in amount for the bushels raised than ever before. We do not ever remember of so wide a margin on wheat as the present year, being from $1 to $1 60, per cental—this is a wide margin, yet only in keeping with the quality of the wheat raised.

Shade Trees! Shade Trees!!

ORNAMENTAL & SHADE TREES

LARGE COLLECTION OF TREES.

EXTRA SIZE SHADE TREES.

Elm and Ash Trees.

of very choice and large size ELM and ASH Trees, for PUBLIC SQARES, and STREETS, will be offered in Lots to suit Purchasers.

Mulberry Trees.

Large size Mulberry Trees, White Rod, and MOLUS MULTICAULIS, of all sizes, suitable for planting out as Shade or Ornamental Trees, and also as Fruit Bearing, or for feeding the Silk Worm.

The Mulberry Tree makes a handsome Shade Tree, and is an Ornamental and Fruit Tree combined.

These Trees will be sold in lots to suit purchasers.

OSAGE ORANGE TREES.

A few lots of Osage Orange Trees, for setting out as Ornamental Trees. Also

SILK WORM EGGS:

Of the FRENCH ANNUAL SPECIES, for sale.

The above will be sold on the best of terms.

P. S.—Orders addressed to A. P. Smith, will be promptly attended to.

Sample Trees can be seen at the FARMER OFFICE, where information of the quality of the Trees and the price can be had.

A. P. SMITH.

Of the well known SMITH'S GARDENS,

Sacramento City, Cal.

COMMISSION SALES-ROOM — AND — Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash, or bills could be sent by Express, to be collected on delivery

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns, and which we have the exclusive sale for this Coast.

We also call attention to the

NEW GATE.

A most valuable invention, particularly to Farmers and Stock Raisers. County Rights for sale.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city

The following are the kind of Goods imported or consigned to us for sale and which can be offered on the most favorable terms:

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence. In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown.

FINEST MIXED LAWN GRASSES,
FINEST MIXED GRASSES FOR PERMANENT PASTURES.

FINEST MIXED GRASSES FOR SHEEP-WALKS
FINEST MIXED GRASSES FOR MEADOW-LAND.

PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR CHILI CLOVER,
KENTUCKY BLUE GRASS
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental

TREE SEEDS.

TOBACCO SEED,
COTTON SEED,
COFFEE SEED,
TEA SEED.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

These will be ready in the months of November and December.

Collections can be forwarded by post at the following rates:

50	Packets choicest and best	$10 00
25	do do do	5 00
12	do do do	3 00
50	Packets Good Selected	6 00
25	do do do	3 00
12	do do do	1 50

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference

Silk Culture:

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

FLOWERING BULBS.

Lilies, Tulips, Hyacinths, Amaryllis, Anemones Ranunculus, Narcissus, Tuberoses, Peony-Roots, Crocus, Snow-Drops, Very Choice Gladioli,

Choice collections of Flowering Bulbs, comprising all the most showy and leading varieties from $5 00 and upwards,

EVERGREEN AND DECIDUOUS SHRUBS, ORNAMENTAL TREES.

FRUIT TREES.

The newest and most approved sorts:

Peaches, Figs,
Plums, Almonds,
Cherries, Walnuts,
Apricots, Nectarines,
Pears, Grapes,
Apples, Etc. Etc.

Also the best varieties of Strawberries, Raspberries, Gooseberries, Currants, and Blackberries.

PERPETUAL FLOWERING ROSES

Of the best kinds.

GREENHOUSE AND BEDDING PLANTS.

Any one desirous of having their Gardens look gay through out the season, can be furnished with the plants at a reasonable rate, by applying at this office.

Every information given as to the cultivation of Plants and raising of Seeds, etc. Also respecting the mode and best systems of Pruning all varieties of Trees, etc.

Gardens and Grounds designed and put in order, and every article furnished for same.

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference.

WARREN & CO.,

Farmers' Headquarters. 320 Clay Street, upstairs.

SPLENDID PREMIUMS!! 1870!

OUR SEVENTEENTH YEAR

AND

THIRTY THIRD VOLUME

OF THE

"California Farmer."

With the New Volume in January we begin our SEVENTEENTH YEAR of Labor with this Journal.

THE CALIFORNIA FARMER PREMIUMS.

The CALIFORNIA FARMER will club with the following Magazines and Journals, and furnish them for the year 1870 at the following rates.

The New York Independent,

PREMIUM ENGRAVINGS,

The California Farmer and the Independent both for $7 50, and to present them with Richie's splendid steel engravings of GRANT and COLFAX, the price of which is $2 each, thus giving them these two Splendid and Popular Pictures worth $4, and both these Papers for $7 50.

The CALIFORNIA FARMER and the New York Christian Union, new series, Edited by Rev. HENRY WARD BEECHER, $7 50.

The CALIFORNIA FARMER and the Harper's Monthly, Weekly and Bazar, $14,00.

The CALIFORNIA FARMER and either of Harper's Magazines delivered post paid $8,50.

The CALIFORNIA FARMER and the New York Weekly Tribune, $6,50.

The CALIFORNIA FARMER and the American Agriculturist, $3,00

The CALIFORNIA FARMER and the New York Monthly Horticulturist with extra Steel Engravings of "Country Life," $7,00.

The CALIFORNIA FARMER and the Phrenological Journal of New York now in its 50th Volume, $7,00.

The CALIFORNIA FARMER and the American Stock Journal, $5,50.

We shall add others with our next issue.

Any other Journal or Periodical desired we will furnish with the FARMER on the most liberal terms when desired.

The Terms of the FARMER will remain the same—$5 per year, $3 for six months, (gold price,) and $1 extra when payments have been delayed, and these terms are unchangeable. A liberal allowance for clubs; when five copies are paid for, six copies will be furnished.

We call attention to the Premiums offered, and the Union of other Journals with ours.

WARREN & CO., Editors and Publishers,

320 *Clay St.*, San Francisco.

GYPSUM.

(Sulphate of Lime.)

This well known but most wonderful fertilizer has not yet been practically introduced into the Agricultural interests or before the minds of our California cultivators, for the reason that there was no supply, and because it was hard to make them believe our lands needed manuring.

The time, however, has arrived when, by the admitted fact of the deterioration of our soil and the lessening of crops, something must be done to restore the soil and bring it into that state of fertility necessary to make it profitable to cultivate the soil.

Gypsum is a compound of Sulphuric Acid and Lime, and the object of this fertilizer is the fixing of Ammonia, thus making it the direct food of plants, either by supplying the Sulphate of Lime or by its decomposition, affording the Sulphur so necessary to the due development of certain plants.

Sprengel's Analyses shows the quantity of Lime and Magnesia, Sulphuric and Phosphoric Acids to be very large in the following plants, and for them this fertilizer has no superior:

Wheat, Barley, Oats, Potatoes, Cabbage, Swedish Turnips, Clover, Beets, Turnips, and root crops generally; thus ensuring to a certainty its great importance to the Farmers.

Liebig's Natural Laws of Husbandry gives conclusive proofs of its superiority as a fertiliser on Clover and Grasses, furnishing details of experiments made by distinguished men in various parts of Europe.

According to the experiments made by Backholts, Gypsum is composed of *thirty-three* parts of Lime, *forty-three* of Sulphuric Acid, and *twenty-four* of the water of crystallization.

Gypsum is often called Plaster of Paris, but this is wrong—it only takes that name and character when it has been deprived of its water of crystalization by fire; there it becomes *Calcined Gypsum* or Plaster.

Gypsum for Dry Countries like California, will prove immensely valuable, as when used as a fertilizer in our hot and dry soil, its waters of crystalization are seperated by means of our hot climate and go at once to benefit the plants, while the Acids and Sulphate of Lime is taken up by the soil, enriching it to a very great degree.

The undersigned is now prepared to furnish this valuable fertilizer by the quantity to all who desire to try its well attested virtues.

CHAS. J. JANSON,

222 BATTERY STREET.

STILL TRIUMPHANT!

THE COMMITTEE OF AWARDS OF OUR STATE and Mechanics' Fair, aware of the superior merit of the H. & L AXLE GREASE over all imitators, have again awarded HUCKS & LAMBERT their Premium, their article having stood the test for over Sixteen years. They are now prepared to sell their well known Axle Grease at as low a price as any other in the market, New York and Chicago not excepted

P. S.—To consumers—Don't trust to the red cover ask for HUCKS & LAMBERT'S AXLE GREASE

EUROPEAN.

From our Special Correspondent.

PARIS, January 1st, 1870.

GAME LAWS OF AUSTRIA.

In Austria the game laws, are the subject of much contention on the part of the farmer. In 1849, the law abolished the feudal conditions, by which one man had the right, to hunt or shoot over the property of another—a law which originated with the French Revolution of 1789. The law of 1849, however, allowed the townlands to unite together, and "let" the right to hunt over the lands to proper persons, crowned with this the Farmers who had suffered much by the depredations of hares and roebuck "let" their own lands to themselves for sporting purposes, and soon not a specimen of any kind of game was to be found. In the presence of this possible extinction of game, the government in 1852, deprived the Farmer of the right to hunt or shoot over his property, and limited the privilege to those chosen by the administration, that is, the landed proprietor or the nobles. The Farmers are now agitating for a return to the old law, which limits, as in France, the right of hunting or shooting over a property, other than one's own.

INQUIRIES ABOUT AGRICULTURE.

Some four years ago, the government issued a commission of Inquiry into the state of French Agriculture. The report of the Commissioners, has not yet seen daylight—and possibly never will. Agriculture, through the medium of the Agriculturists' Society of France, is about making an inquiry into the grievances of the Farmers, itself. The Society in question, under the auspices of M. Drouyn De Shuys, has issued a series of five questions, bearing on the economic condition of wool, meat, wine, sugar, and alcohol. These questions will be addressed to every person of note, connected with Agriculture. A great meeting will discuss their replies in February, and the conclusions must have a great weight, in directing the policy of the Government.

ANALYSES OF SOILS AND PLANTS.

That scientific-Revolutionist, M. Ville, does not let the grass grow under his feet. He has just brought out a new work of 400 pages, wherein he discourses on three groups of plants, cultivated respectively for oil, sugar or fecula. The able author opens by asserting his theory, that nitrogen, phosphoric acid, lime and potash, are the active agents, of manures; and that the water, woody matters, and secondary minerals, which enter into the composition of Farm-yard manure, are only so much "leather and pronels." The water only augments the carriage, and increases the difficulty of working—the woody fibre is useless, and the secondary minerals, exist in sufficient quantity already in the soil, that to add to these, would be something like bringing coals to Newcastle. The able Chemist, seeks by analysis what is the predominating element in each plant, and prescribe such accordingly, reducing the dose of the other three elements proportionately. In turnips, for an example, it is phosphate of lime, which is the predominating element. In sugar plants, phosphate of lime is the ruling element, but it produces not the same action. Swedish turnips contain 1 per cent of sugar, but the latter being in a glucose state, could never serve for the fabrication of sugar, like beet root, where it exists as cane sugar. It could be distilled however.—Well, sulphate of lime, increases the produce of turnips, not the sugar, the same salt, in the case of beet, increases the sugar, but not the produce, while in regard to the sugar cane, it affects both the sugar and the yield. The battle is becoming very general on the subject of its mineral nutrition of plants. The analytical tables of the celebrated German chemist Wolff, are accepted by all parties, as the basis of their arguments. These tables, contains the mean of thousands of analysis made on all cultivated plants, so that by their aid, it is easy to calculate the quantity of matters abstracted from the soil by such a harvest, and reciprocally, to establish the nutritive value of any chemical manure. The "mineral theory" was first prominently advocated by Liebeg in 1840, in his "Agricultural Chemistry," but as early as 1563, Bernard Paling, in his treaties on "various salts, and Agriculture," clearly broached the subject.

STEAM PLOW, MANURES, BOOKS ETC.

The hatters of Paris buy up nearly all the Rabbit skins offered for sale, and these are numerous as Rabbits are largely bred for the markets. The parings of the skins, the ears etc., are sold for 8 fr, the cwt., and are employed for manuring the Orange groves at Nice.

An enterprizing committee of Farmers subscribed for a Steam Plough, and have been making money by it. Not only has the implement done their own work, but they hired it out and it has paid its cost, and now brings in a profit to the owners, the idea is spreading.

I have observed a very useful article for watering fruit trees, with the view of destroying noxious insects, and where the ordinary "can," falls short. The new watering pot is light, and fitted with a piston pump, that the finger can work, and of sufficient force to throw a jet of water ten yards high.

I regret to say, that an extensive trade is being carried on in the rearing of game cocks for the Belgian market. The "sport" is prohibited in France, but the "fancy," can do as they like in Belgium. One "rearer," has the pedigree of his birds for several years back.

Count de Beauvoir, has published a very interesting, readable book, on the Agriculture of Australia—on the cattle and sheep stations, squatter life, etc. He states that the law of New South Wales, prohibits the importation of any rare Stallion or Mares, that has not won a "blue ribbon" in England.

THIRD ANNUAL MEETING OF THE WOOLEN MANUFACTURERS' ASSOCIATION OF THE NORTHEST.

This is a very important meeting, and we take pleasure in giving publicity to this gathering of business men who are now interested in our "Textile Fabrics."

The meeting will undoubtedly be a very large one. Persons will attend from all the regions round about. We sincerely hope that California will be represented, for our State must wake up to the importance of our producing all the material we need for manufactures of all kinds, and we must *have* the manufactories also.

Let California see that she is well represented at this important meeting. There is ample time to do so, as the Pacific Railroad gives a speedy trip to Chicago.

ANNUAL MEETING.

The Third Annual Meeting of the Woolen Manufacturers' Association of the Northwest will be held at the Tremont House, in this city, on Thursday, February 17th, 1870, at 10 o'clock, A. M. The business to be transacted will be the election of officers for the ensuing year; the consideration of propositions for the location of the next annual exposition; the discussion of questions of material interest to manufacturers; and of several amendments and changes in the constitution of the association, the most important being such changes in the name and plan of operations as will include manufactures of cotton, silk, flax and hemp. The name proposed to be substituted is "The Textile Manufacturers' Association of the West and South," in accordance with joint resolutions adopted at the annual exposition held in Cincinnati. Manufacturers and producers of staples interested are cordially invited to be present and take part in the discussions and deliberations.

GEO. S. BOWEN, *President.* JESSE McALLISTER, *Secretary.*

CHICAGO, Jan. 25th, 1870.

DIRECTORS OF WELLS FARGO & CO'S., EXPRESS.

At the Annual Meeting of this powerful Company, held in New York, *Nine Directors* were chosen, of which Five were original Sacramentians. All the corporators of the Central Pacific Rail Road. Pres. Stanford, C. P. Huntington, D. O. Mills, Lloyd Tevis, M. S. Latham.

Thus these great enterprises are in unison in action, to advance the State of California.

OLE BULL AMONG HIS COUNTRYMEN.

The "Angel of the Violin," as Ole Bull has been named, is now again with us, and those who have ever heard him once, will be sure to hear him again, for his magic Instrument has an electric power that is most potent, it follows you and speaks to you in dreams.

As there are suggestions now before the public relative to colonizing Scandinavians in California, we have selected a sketch of the early visit of this wonderful Artist, from *Putnam's Magazine*, of May "68"—the sketch is deeply interesting, and by reason of his presence again with us in San Francisco, we give it to our readers.

What this stalwart race has done for other states may be inferred from the article below.

Many among us still remember the triumphal progress of this "true son of Nature and the North" through the country in the years 1844-'45, when Chicago was a mere village, and Wisconsin had not found a place in the galaxy of States.—Returning again in 1852, he received an appreciative welcome, not only from the musical public but from a host of personal friends. And now the "Angel with the violin" has again appeared among us, descending this time into the Western metropolis, or rather taking that on his way into *Norsk* America.

The counties of Rock and Dane, Wisconsin, excel in fertility and picturesqueness, and early attracted large numbers of Scandinavian emigrants. Before they were penetrated by Railroads, long wagon trains brought the advance guard of settlers to the openings of Rock River and Four Lakes. The ancient hunting grounds of Black Hawk became the portion of a race almost as primitive in manners as the original owners of the soil

But the essential difference between Norsk and Normad was quickly seen. The rude huts, or excavations in the sides of the bluffs, which often gave temporary shelter to the first settlers, were soon exchanged for comfortable log houses, wide spaces of "breaking" showed the tender green of the young wheat, and the tinkle of cow bells in the unfenced openings gave cheering promise of approaching civilization.

Travelling through Wisconsin in the summer of 1852, we came upon several large parties of Norwegian emigrants who had landed in Milwaukee, and were making their way on foot into the interior of the State. Half a dozen ox-teams, loaded with the great brass or iron bound chests in which were stored the goods of perhaps a hundred families, led the strangest procession, our eyes had ever seen.

Women in coarse blue woolen petticoats, with kerchiefs on their heads, led or carried children; men strolled along, chatting and smoking under a variety of burdens; the little boys, quaintly dressed in leather caps and trouses, had the elfish look of dwarfed men; and aged couples plodded more slowly their path to the promised land. Their faces had neither the stolidity of the German peasants, nor the vivacity of those of southern Europe; they seemed to us full of patience, like the faces of some of the animals. We welcomed these hardy travellers in the few Norsk words at our command, and the "Bravet Folk" cheerily responded in praises of the country. Exchanging our "Adje's" and "Farvels," one saucy "dutterin" called after us, "*Norye* er et smukt Land," with such emphasis that we could but believe there was the pain of a lost love in her heart.

Ten years later, a stage ride from Madison southward took us again through the region where we had met the emigrant trains. After riding for miles through an unbroken stretch of wheat and corn fields, we were enjoying the grateful shadows of a vista overarched with foliage, when suddenly we reached a section-mark, and turned a square corner *out* of the woods. "There," said our driver, in unmistakable American, as we rose to the top of a ridge, "now we're in Christian-sy!"

If he had told us we were in the land of Beulah, we should have believed him.

A miracle had been wrought under our very eyes, and nothing in the way of faith seemed too mighty for us. Below us swelled the green billows of the prairie-sea, covered with the ripening harvest, and dotted here and there with flocks and herds. The houses were so hidden in orchards and plantations that their effect was altogether lost in the landscape; the blue expanse of Lake Koshkonong gleamed in the distance, and directly before us, crowning a beautiful knoll, stood the Norwegian Church. The foreign architecture of the building, the solid stone wall which enclosed it and protected the "God's acre" from profanation, the path leading from the gate to the Church door between grass-grown graves, together with the absolute quiet of the place, gave an air of unreality to the scene. This picture, cut from a transatlantic canvas, was Christiania.

"Looks lively 'nuff raound here Sunday," remarked Jehu; "that ar' perrary's fairly peppered with folks" And so we afterwards saw it, riding many miles on Sabbath mornings to enjoy the sight, and to join in the simple service of the Lutheran Church.

There are many such Churches and rural congregations in Wisconsin, many populous townships where Norsk is almost the only spoken language; and the value of this industrious and thrifty element to the State can hardly be overrated. At the outbreak of the rebellion, there sprung from it one of the best regiments sent into the field—a regiment without a drafted man, upon which fell some of the most important service of the war. From Island No. 10, through Western Tennessee to Alabama, and thence back to Stone River, its path was marked by excessive labors and serious loss; at Chickamauga their brave Col. Hans Heg perished; at Mission Ridge, Resaca, Kenesaw, and Atlanta, the story of their unflinching patriotism was written in blood. When mustered out, "the lion with an ax on a red field," was laid away with the other tattered battle-flags in the Capitol, and these foreign born volunteers went back to their homes to exercise with greater intelligence and zeal their well earned rights of citizenship.

We read the above with a thrill of pleasure as we recalled this wonderful man as we have seen him both in Europe, in Boston, New York, and also in California, clasping the Instrument that speaks the music that his own soul knows, and few others like him. We give this sketch as a tribute of respect, and as he will now speak with his instrumental song to us, we know there is an intellectual feast for all those who can enjoy it.

Ole Bull will appear in our City tomorrow evening, and Saturday evening at Oakland, and over our State at an early day.

Home Correspondence,

[For the "California Farmer."]

WOMAN SUFFRAGE

"Behold the day of promise comes,
Full of inspiration,
The blessed day by prophets sung,
For the healing of the Nation.

Old midnight errors flee away,
They *soon* will all be *gone*,
While heavenly angels seem to say,
The good time's coming on."

THE HUTCHINSON FAMILY SONGS.

Grand old "Hutchinson Family!" How well we remember the first time we heard these *prophetic* words flow from their lips, in strains of glorious, indescribable harmony, such as we had never before (or since) listened to, little dreaming we should live to see the dawning of this triumphant day of Reformation.

Thank heaven, the veil of bigotry and false education has been "rent in twain," and through the opening we catch the golden rays of "the good time coming" which was foretold by these men of Genius, and of Song. Though many of them for years have slept the sleep that knows no waking, yet, we believe, in happy homes above they rejoice to see the fulfillment of their inspired poesy.

Sacred their memory, and the spot that marks their resting place in the Old Granite State. Have not "midnight errors" been chased away by the rising sun of Progression?—have not angels of Light and Mercy sang the song of Redemption to *millions* who were sitting in darkness and in chains?—have not harps been taken from the willows, and tuned anew to echo the anthems of hearts shouting praise to God, for Liberty? And furthermore, have we not beheld in the past few weeks something that speaks of *still greater victories?*—something that tells of a kingdom being overthrown, even the royal kingdom of *man*, for the hand of long silenced Justice has written upon those once impenetrable walls of skepticism these fiery words, "thou art weighed in the balance and found wanting."

No wonder the glittering cup of self inflation falls from trembling hands, and their eyes appear like sightless orbs, so fearful is the transition from *absolute monarchy* to that of *social equality*; aye, and *that* equality *woman*, once the subject of kingly pity or derisive scorn.

Ah! Belshazzar has held his *last* banquet; the Medes and Persians can no longer quote their laws *immutable*, and while they find themselves defeated can only vent their rage *behind* the backs of their conquerors, or report the battle through *insignificant* papers, clothed in language the *Police Gazette* would blush to see in its columns. For proof of this, remember their statement in regard to the Woman Suffrage Convention held at Dashaway Hall, January 26th, 27th, 28th and 29th.

Noble representatives of the sterner sex! In vain we search to find that which the Creator breathed into inanimate clay and called the *soul*—a microscope of the largest magnitude would fail to discover it, while on the other hand it would not be required to show the true spirit of woman, struggling against *Wrongs*, and fighting for the Right—*that* and nothing more.

WOMANS' SUFFRAGE CONVENTION.

The Convention we are proud to say was a *success*, conducted with *energy* and *dignity* seldom excelled by our political opponents, entirely devoid of wrangling, and the services of the *star dignitaries* were not called into requisition to quell disturbances or arrest any of its members for making "night hideous" by their bacchanalian revelries.

Most of the speeches made gave evidence of serious thought and study, proving to the audience this suffrage question now being agitated is no child's dream, or one to be lightly spoken of and then thrown aside, but that the women of free America are in *earnest*, and determined "to fight it out on this line"

A great amount of work was accomplished and many good Resolutions adopted, all tending towards advancing the object for which they were convened.

When the hour arrived for the election of officers, Mrs. A. A. Haskell, of Petaluma, was unanimously chosen President of the Woman-Suffrage State Society.

For Vice Presidents—Mrs. Denio, Solano County; Mrs. Eddy, Nevada County; Mrs. Kingsbury, San Diego County; Mrs. Lewis, Sacramento County; Mrs. E. D. Hall, Los Angeles County; Miss Kirby, Santa Cruz County; Mrs. Mc Comb, San Francisco; Miss Magie Eagar, Alameda County; Miss Watkins, Santa Clara County; Miss S. P. Latimer, Sonoma County.

Mrs. Minnie Mc Kee, Recording Secretary.

After short speeches, they adjourned to meet in San Francisco, January, 1871.

The Convention was one to make us more faithful to the cause, and more hopeful for the future, feeling that God will hear our petitions knowing they are only for equal justice, not vain glory.

We do not expect *elevation* by way of the ballot, but we seek to *elevate* the politician by smoothing the rugged way, through the gentle influences that belong to womanhood, infusing the spirit of Truth, Honesty, and moral worth, at the same time receive our *just* dues through the *same* agency that made *them* the arbitrators of our privileges in days gone by.

As Paul stood before King Agrippa, pleading for himself and his people, so will you unconverted to Woman-Suffrage, plead for *her* when the scales of unbelief shall have fallen from your eyes, and you behold the *narrow* limits you once prescribed to woman's high and holy mission.

If woman was considered pure enough to be made the mother of Him whose advent was hailed with joy by Seraphs that surround the throne of the Eternal City, saying "Peace on earth, good will towards man," may she not in this day of christian civilization, be capable of *assisting* in framing laws to govern *him* who was only the *instrument* of prophecy, foretelling that through *her* the world should be redeemed *from* sin?

Thank God the great brotherhood of man are not all Medes and Persians, but many of them converted Pauls who now give their time, money, and labor, to help us on in this gigantic work. As a co-worker we may rest assured the Editor of the CALIFORNIA FARMER—Col. Warren—will ever lend us his aid and sympathy in all our trials and triumphs.

ZORA.

San Francisco, February 5th, 1870.

STATE FAIR OF LOUISIANA.

We have received the handsome Illustrated Volume of this State Society, containing the "*List of Premiums*" for the State Fair, which is to be held in the Extensive Grounds of the Association, in the City of New Orleans, commencing April 23, and continuing eight days, including the May-day Festival.

The Volume sent us is of 100 pages, giving the Premiums and $6,000 additional not specified in their List, but all of the most liberal character—embracing every Department of Agriculture, Horticultural, Floriculture, Stock, Manufactures, Mechanic Arts, Household Manufactures and Skill,—Premiums being of Gold, Silver, and Bronze Medals, many of them of high value. Every branch of Industry, Art and Science is most honorably noticed and encouraged.

Eminent men—men of distinction, govern the Society:

J. N. Marks, Esq., President.

C. N. Slocum, N. E. Bailey and James Jackson, Esqrs., Vice Presidents.

Salter Holmes, Esq., Secretary and Treasurer,—to whom we return thanks for the courtesy of the Volume sent.

DUTCH FLAT WAGON ROAD.

The Directors of the Central Pacific Railroad have, with a commendable liberality, presented *this celebrated road* to the several Counties through which it passes.

We presume the Counties will now make it a *Free* Turnpike. This will be good news for the ALTA; it can now have a *Free Pass*.

Agriculture.

WHAT I KNOW OF FARMING

BY HORACE GREELEY.

ESSAY NUMBER FOUR.

I write mainly for beginners—for young persons and some not so young, who are looking to farming as the vocation to which their future years are to be given, by which their living is to be gained. In this chapter, I would counsel young men, who, not having been reared in personal contact with the daily and yearly round of a farmer's cares and duties, purpose henceforth to live by farming.

To these I would earnestly say, "No haste!" Our boys are in too great hurry to be men. They want to be bosses before they have qualified themselves to be efficient journeymen. I have personally known several instances of young men, fresh from school or from some city vocation, buying or hiring a farm and undertaking to work it; and I cannot now recall a single instance in which the attempt has succeeded; while speedy failure has been the usual result. The assumption that farming is a rude, simple matter, requiring little intellect and less experience, has buried many a well-meaning youth under debts which the best efforts of several subsequent years will barely enable him to pay off. In my opinion, half our farmers now living would say, if questioned, that they might better have waited longer before buying or hiring a farm.

When I was ten years old, my father took a job of clearing off the mainly fallen and partially rotten timber—largely White Pine and Black Ash—from fifty acres of level and then swampy land; and he and his two boys gave most of the two ensuing years (1821-2) to the rugged task. When it was finished, I—a boy of twelve years—could have taken just such a tract of half-burned primitive forest as that was when we took hold of it, and cleared it by an expenditure of seventy to eighty per cent. of the labor we actually bestowed upon that. I had learned, in clearing this, how to economize labor in any future undertaking of the kind; and so every one learns by experience who steadily observes and reflects. He must have been a very good farmer at the start, or a very poor one afterward, who cannot grow a thousand bushels of grain much cheaper at thirty years of age than he could at twenty.

To every young man who has had no farming experience, or very little, yet who means to make farming his vocation, I say, Hire out, for the coming year, to the very best farmer who will give you anything like the value of your labor. Buy a very few choice books, (if you have them not already,) which treat of Geology, Chemistry, Botany, and the application of their truths in Practical Agriculture; give to these the close and thoughtful attention of your few leisure hours; keep your eyes wide open, and set down in a note-book or pocket-diary each night a minute of whatever has been done on the farm that day, making a note of each storm, shower, frost, hail, etc., and also of the date at which each planted crop requires tillage or is ripe enough to harvest, and ascertaining, so far as possible, what each crop produced on the farm has cost, and which of them all are produced at a profit, and which at a loss. At the year's end hire again to the same or another good farmer and pursue the same course; and so do till you shall be twenty-four or twenty-five years of age, which is young enough to marry, and quite young enough to undertake the management of a farm. By this time, if you have carefully saved and wisely invested your earnings, you will have several hundred dollars; and, if you do not choose to migrate to some region where land is very cheap, you will have found some one willing to sell you a small farm on credit, taking a long mortgage as security. Your money—assuming that you have only what you will have earned—will all be wanted to fix up your buildings, buy a team and cow, with the few implements needed, and supply you with provisions till you can grow some. If you can begin thus experienced and full handed, you may, by diligence combined with good fortune, begin to make payments on your mortgage at the close of your second year.

I hate debt as profoundly as any one can but I do not consider this really running into debt—One has more land than he needs, and does not need his pay for it forthwith; another wants land, but lacks the means of present payment. They two enter into an agreement mutually advantageous, whereby the poorer has the present use and ultimate fee simple of the farm in question, in consideration of the payment of certain sums as duly stipulated. Technically, the buyer becomes a debtor; practically, I do not regard him as such, until payments fall due which he is unable promptly to meet. Let him rigorously avoid all other debt, and he need not shrink from or be ashamed of this.

I have a high regard for scientific attainments; I wish every young man were thoroughly instructed in the sciences which underlie the art of farming. But all the learning on earth, though it may powerfully help to make a good farmer, would not of itself make one. When a young man has learned all that seminaries and lectures, books and cabinets, can teach him, he still needs practice and experience to make him a good farmer.

—"But would n't you have a young man study in order that he may become a good farmer?"

—If he has money, Yes. I believe a youth worth four or five thousand dollars may wisely spend a tenth of his means in attending lectures, and even courses of study, at any good seminary where Natural Science is taught and applied to Agriculture. But life is short at best: and he who has no means, or very little, cannot really afford to attend even an Agricultural College.—He can acquire so much of Science as is indispensable in the cheaper way I have indicated. He cannot wisely consent to spend the best years of his life in getting ready to live.

He who has already mastered the art of farming, and has adequate means, may of course buy a farm to-morrow, though he be barely or not quite of age. He has little to learn from me. Yet I think even such have often concluded, in after years that they were too hasty in buying land—that they might profitably have waited, and deliberated, and garnered the treasures of experience, before they took the grave step of buying their future homes; with regard to which, I shall make some suggestions in my next.

A FARMER'S HOME.

"*Make Home Beautiful.*"

[We give the following very happy sketch of what a Farmer's Home should be, and ask our Farmers *which picture* represents their own?

The sketch here given is from *Harper's Magazine* for February, and from the pen of Mary P. Wells, whose picture is a very truthful one. We hope all the Farmers in California will own the first picture.—ED. F.]

Early in October they were married, and moved into their new home, now hardly to be recognized in its daintiness of fresh paint, pretty papers and new furniture. It was far from being a fashionable or imposing residence; nothing Gothic, or Italian, or Elizabethan about it, unless indeed we except Laura's one extravagance—the little bow-window; but it had an eminently cozy, homelike air. The moment you stepped inside, you received a comfortable, cheerful impression, as if here were a place where people were in the habit of enjoying themselves. Entering a little square hall—on one side was the dining-room; on the other, the parlor; back of the parlor, the bedroom. The furnace imparting a summer temperature, the doors of these adjoining rooms all stood open, giving good air, and a deal of roominess for so small a house. The parlor paper was a green and gilt flower on a light drab ground; the carpet, an ingrain, small checks, green the predominant color. Through the bow-window the sun shone brightly in over Laura's plants, making a summer within, even if the ground were white with snow outside and the mercury down among the zeros. Each side of the bow-window, on little brackets, Parian busts, Eve and Psyche, wedding presents, looked out from English ivy that twined around them, and then met over the hanging basket in the middle of the window. On the walls hung two or three good engravings and photographs, over them clusters of bright autumn leaves—souvenirs of the wedding tour. A set of hanging book-shelves, bearing the united libraries of Lance and Laura, presented an odd combination of poetry and works on Agriculture and "The Horse." Then there was a lounge which *was* a lounge—not a rack contrived to exasperate the human frame to the utmost by its knobbiness—an easy-chair, a camp-chair, a shaker rocking chair, one or two cane-seated chairs, a centre-table with the big lamp, books, papers, and Laura's work-basket.

This was the family sitting-room. Looking in of an evening, you would have seen Lance one side of the table in the big easy-chair, reading his paper, or chatting with Laura, sitting opposite in her shaker rocker with her sewing. One great advantage in marrying a farmer is, that you have him at home with you evenings, provided you make yourself tolerably agreeable to him. Laura, even if she were married, still thought it worth while to fashionably arrange her hair, wear the bright bow, the dainty collar, the little et-ceteras that really add so much to woman's attractions. Lance had too much respect for Laura and himself too to sit down for the evening in his old frock, tumbled hair, overalls tucked into coarse boots, savoring strongly of the barn-yard. He brushed his hair, donned an old coat and slippers, and so, with a little trouble, gaining vastly in comfort and his wife's affections.

From their windows the light of a happy home streamed cheerfully out over the snow, a benediction to the passer-by. People were fond of dropping in there for an evening, it was "so pleasant," they said. Many a farmer's boy and girl, after an evening at Lance's, went home thinking farming wasn't so bad, after all, and they wouldn't be in such a hurry to grow old enough to leave for the city, if it could be as pleasant at home. For fashion in Knipsic Farms had ordained an entirely different order of things from that prevailing at Lance's. The parlor of every respectable farmer must contain a very hard and slippery hair-cloth sofa, six chairs, and a huge rocking-chair possessing the same qualities in even a greater degree; other furniture to correspond, arranged at stiff angles around the walls. This sacred apartment, as well as the whole main part of the house, was kept cold, dark, shut up, suggestive to the bold invader who dared penetrate their dreary shades only of funerals. The family lived mostly in the kitchen, sustained, probably, by the proud consciousness of possessing a best parlor and hair-cloth furniture. Passing by at night, you would think the house uninhabited, did not a ray of light from way back in the L reassure you. Did company come unexpectedly, so great a parade was made of building fires, opening rooms, getting out the best things, that the unfortunate guest felt he should never dare come again. So Lance and Laura were unconsciously doing missionary work that a farmer's home need not necessarily be destitute of any desirable comfort or refinement.

There have been 1,000,000 bushels of peanuts raised on the south side of James river, between Pittsburg and Norfolk, Va., this year.

THE POULTRY YARD.

The following we clip from our exchanges about *Poultry*:—

HOW FOWLS ARE MADE IMPORT.

In *Rural* of October 9th, J. P., of Michigan, complains that he does not receive genuine fancy fowls from a poultry dealer in New York. Now while I have no doubt there are dishonest men dealing in poultry, as well as in plants and seeds, J. P.'s case may be similar to one which occurred here a few years since. Somebody North had ordered some fine game fowls from a dealer in the city, and by some means they were mis-sent, and the error was not noticed until the coop arrived at this station, where it was put upon the platform to await the arrival of the first express going in the opposite direction. Some smart chaps, with a keener sense of "sport" than justice, noticing the fine points of the trio of birds, decided to divide with the owner. So they pried up a slat and substituted two common fowls for a like number of "fighters," and while they were winning many a hard-fought field, the consignee was doubtless scolding about dishonest dealers.—M. A. G., *Troy, Pa.*

EARLY LAYING CHICKENS.

I noticed a paragraph in *Rural* about Cochins laying at the age of six months. I can beat that story all to rags! April 10th I put some eggs under a hen that was sitting, and at the end of three weeks she came off with a fine brood of chicks. They grew and did well. August 20th, one of these pullets laid for the first time, and since then more have commenced to lay. They are Sicilian and Spanish; they are good winter and summer layers, but are not the hens for sitting; they are not inclined to sit at all. My old Brahmas do all the hatching.—LUCIUS RANDS.

PROFITS OF POULTRY.

Benjamin P. Wertsner, Evergreen Farm, Montgomery County, Pa., writes us he purchased a Buff Cochin rooster at the late Poultry Exhibition of John M'Gowan, for the purpose of crossing, and that his experience is, decidedly, that poultry-raising is one of the most profitable branches of the farmer. He says, "I have 150 hens, and am getting 70 eggs daily. By calculation, I find they are paying $2 per day, clear of feed at this time. I am now setting hens, and will be ready to send chickens to market as soon as spring chickens are in demand."

IMPROVED VS. COMMON FOWLS.

Thomas B. Smith, Stony Brook, N. Y., writes us that from twelve Black Spanish hens he obtained in 365 days, 2,832 eggs, or an average of 237 each. He fed with corn, meat, scraps and vegetables.—He urges that those who have common barn-yard fowls which they want to compare with improved breeds, should keep a record of their product the season through, and not select three of the best laying months in the year. So say we.

ASHES ON FRUIT TREES.

I often make use of ashes round my trees, certainly as often as once a year, and believe it to be of great benefit to them. But, like some of your other correspondents, I have learned not to apply it in contact with the bark of the trees as they become moistened and form lye often too strong for the growing wood. I generally use about one quart of ashes to a tree, scattering it around them as far as the roots are supposed to extend underneath. My large trees, in bearing ten or twelve years, receive an application of from six to eight quarts of unleached ashes to each tree, scattered in the same manner. I never permit the ashes to lie under the ground in any place more than one inch in depth.—*Cor. N. E Farmer.*

FATAL DISEASE AMONG HORSES.

We regret to hear that a new and strange disease has appeared among horses in and around Woodland, in Yolo county, and from reports from that section we hear that the disease is *fatal in a few hours.* All horses that have been taken with this malady have died.

Where are the Veterinary Surgeons?—they should go and learn the nature of this disease and devise a remedy for it?

GYPSUM.

We earnestly advise all who are Cultivators of the Soil to make careful experiments with the Gypsum, on *Orchard*, Vineyard, and Garden. It is a good *fertilizer*, acts well in the soil by fixing and retaining the Amonia, and in the dry season the moisture also.

Sulphuric Acid being a constituent of Gypsum, it is what will prove greatly advantageous to the soil, to trees, vines and plants.

Gypsum kills the Pear Slug, Slugs in Garden soil, and Vermin. Half a ton to an acre of Vines will do good, and a little strewn over Garden soil and spaded in will do great good.

AN EXAMPLE.

Francis Hill, of Exetar (Maine), a man now about eighty years old, took up wild land and began farming about sixty years ago. He lives on the same farm to-day, and in that time has never bought a pound of flour or meal of any kind, a kernel of corn or grain, a potato or apple, a pound of butter or cheese, of pork, beef or mutton, or any other nameable thing which farmers in Maine ordinarily produce from their farms. He has one of the best farms in his town, and works it yet himself.

Will California farmers read and reflect upon the above?

☞ The MOBILE WEEKLY REGISTER, the oldest Democratic paper in the South, is said to have reached a larger circulation than was ever attained by any Journal South of Mason and Dixon's line. It is full of interesting varied matter having an able Agricultural Department, presided over by the veteran Ed and successful Agriculturist, Hon. C. C. Langdon. Its General Literature, Poetry, Stories, etc., make it highly acceptable to the Ladies.

The coming year will open with a new continued story, of deep interest, by one of the most distinguished writers of the day. The price was recently reduced to $3,00 per year which for so large a paper, (12 pages,) is extremely cheap.

SOWING SEEDS AND TRANSPLANTING.

[We invite special attention from all who cultivate *Flowers*, to the chapter on floral matters which we give from the little book of James Vick, Esq., the well known Rochester Florist.

The facts here given though the same we have often published coming form the source named, will, we hope, awaken a fresh thought to those who wish a prosperous garden. There are facts here given which it is important should be strongly impressed on all who have their little "Home Garden," for as we pass around our City, we see too many little "*Parterre*" that might be very beautiful, left in a poor, desolate, and neglected condition.—Ed. F.]

The selection of seeds is a matter of great importance, and on the wisdom of the choice, success or failure may in a great measure depend. The seed should be such as will grow readily, and the choicest of their kind. If it is an Aster, Stock or Zinnia, or any other variety, it should be the very choicest, producing a large per centage of perfectly double flowers. This, of course, depends mainly upon the skill, experience and integrity of the seedsman. Then they should be adapted to the purpose for which they are designed, and receive proper care from the cultivator. If you wish a climber to cover a fence or trellis, the Morning Glory, the Climbing Nasturtion, and similar strong growing vines, will answer the purpose and give good satisfaction; while some of the more tender climbers would not be likely to come up if planted in such a situation as this, and if they did happen to grow, would not cover the place designed for them, and disappointment would be the result. If the object is a brilliant, showy bed on the lawn, or in the border, the Petunia, Phlox Drummondii, Verbenas, &c., will meet your wishes; while a bed of Mignonette, or any of the smaller or less showy flowers would be entirely out of place. If flowers of taller growth are desired for a showy bed more in the background, the Zinnia, the French Marigold, the Gladioli, &c., are admirably adapted to the purpose, while some very beautiful, low, modest flowers would be worthless. In the descriptions, we have given the height the plants attain, so as to aid as far as possible in a proper selection. This subject is mentioned because I have reason to know that grave errors are sometimes made, and good flowers condemned merely because they are out of their proper place. For instance, I have known customers to sow Calceolaria and Cineraria, and other delicate seeds, in the open ground and in soils where a cabbage would hardly condescend to grow, while they require the most careful treatment in the house, and sometimes tax the skill even of the professional florist. While I shall faithfully endeavor to do my part well, I desire to give such information as will enable my customers to meet their share of the responsibility, and then success will be almost certain, and failure all but impossible. No one can hope to become very expert in the culture of flowers in one season, yet with proper attention to the instructions given no one need fail; observation and experience, however, are most efficient teachers.

The seedsman has his difficulties and vexations as well as the growers of flowers. Customers must not think because some variety fails to meet their just expectations that they have been deliberately cheated. No business or profession requires more intelligence, skill and care than the growing of the finer sorts of seeds. There is a constant tendency in almost all sorts to mix and degenerate, and this tendency must be understood and guarded against, and even then we find ourselves sometimes at fault just where we least expected failure. With proper experience, and the necessary convenience for potting, glass, houses, etc., failures are not common, and usually not very serious. As a general rule, good double flowers give but very few seeds, while those that are single or semi-double produce abundantly. Those of my customers who wish to save their own seed of any variety should remember this, and gather only a few of the choicest flowers.

As I design to send out only the choicest seeds, I am very anxious my customers should give them proper care, as the result will be pleasure to them and credit to me. It is possible to destroy the best seeds, and some kinds may be destroyed without much trouble. Indeed, some of the most delicate will only germinate under the most favorable circumstances. With each kind in the body of the Catalogue, and connected with the description, are very plain directions for sowing, &c., but I wish my readers to understand a little of the philosophy of vegetation. This will be of permanent value, and account for many things that heretofore have seemed mysterious. I ask attention to the following suggestions, which have been given in my Catalogue, substantially, in previous years. I would like to make them better this time, but after trying hard find I am unable to improve them.

Look to the Soil.

The Soil and its Preparation.—The best soil for most flowers, and especially for young plants, and for seed beds, is a mellow loam, containing so much sand that it will not "bake" after hard showers. If we have not such a soil, we must, of course, use the best we have. A stiff clay soil can be much improved by a little sand, or ashes and manure, and by pretty constant working. It must not, however, be handled when too wet. Always drain the flower garden so that no water will be on or near the surface. Don't try to grow flowers in a poor soil. Always have a little pile of manure in some outer corner. It is as convenient as money in the purse. Those who keep a cow or horse, will, of course, have manure enough; but those who have no such opportunity can get a load of sods from some meadow, or the sides of the road, lay them in a pile to rot, and give them a soaking with soap-suds on washing days. When the leaves fall, get all you can handily and throw them upon the pile, and no one will be able to boast of better flower-food; in fact this is the very poetry of manure.

Sowing Seed.—This is a very important matter, and one in which the young florist is the most likely to fail. Some old and professional florists make sad work here, for knowledge is not only necessary, but care and attention. One "*forgot*" may ruin a whole sowing of the choicest seeds. Last Spring, a nurseryman, with a good French propagator, obtained sixteen varieties of seeds, mostly of the choicer sorts. In a week or two he sent me a note containing a list of twelve varieties that had failed to grow, the seed "evidently being bad." I immediately took the twelve varieties that were pronounced "bad," sowed them properly in twelve pots, and in ten days sent him a note requesting him to call and see them, each being filled with young seedlings, and the twelve sorts are now growing and blooming together in my grounds. Of course, there are some kinds of seeds that are robust and will grow, no matter how they are treated, just as our weeds grow and thrive under ill treatment, but others require kind and proper treatment, just as almost everything desirable does in the animal as well as in the vegetable kingdom. How easily is the spark of life extinguished in the new-born infant, even in the feathered denizens of our poultry yard, and the sweet pets in the gilded cage. The florist must have flowers that are not natural to our climate—those that flourish in warmer climes and under more genial skies—their dazzling beauty, their delicious fragrance must be secured at almost any cost of time and labor. This is well; but having made up our minds to possess the treasure, we must pay the price—we must study their habits and treat them accordingly. None need feel alarmed at these remarks, or think themselves incompetent to the charge of such treasures without hot-beds, green-houses and professional gardners. This is not true. We have known ladies who, with but little pretensions, equaled the most distinguished florists. There seemed to be magic in their fingers, and every thing they touched flourished. I will endeavor to give some hints on the philosophy of vegetation, that I hope will be profitable. It is true that a hot-bed, if properly managed, is of great aid in effecting germination of seeds, and it is well all should know why this is so.—*Vick's Illustrated Catalogue.*

MACLURA AURANTIACA. (*Osage Orange.*)

This is a well-known hedge plant, a native of Texas and other sections of the Southwest. The seeds are usually obtained from those sections, and if fresh, there is no difficulty in making them grow when planted in Spring; but it is always best to mix them with moist sand and put them in a warm place until they begin to sprout before sowing. If the seeds are good, they will start in a few days; if not, they will become soft and rotten. By trying the seeds in this way, much labor will often be saved, as it is labor lost to sow unsound seeds. The Osage Orange seeds will keep sound for a year or two if placed under proper conditions; but this is often neglected, and much worthless seed is sold; and having had some experience in buying such, I give this hint, says Mr. Fuller, to caution the reader not to sow poor seed even if he has been so unfortunate as to purchase it. The seed may also be sown in the Fall, but in that case the sprouting must be dispensed with.

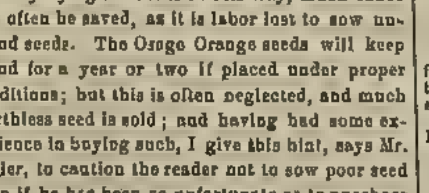
The Osage Orange makes one of the finest hedges known. When properly planted and carefully pruned, it can be made a sure protection to every kind of stock, and to all animals as small as a rabbit.

There are several very handsome and extensive hedges in our State. One at San Leandro, at the Lewellen Orchard, and one at the Alhambra Gardens, Martinez, of Dr. Strenzel. Its bright evergreen foliage makes it beautiful as well as safe.

High Colored Fruit.

A writer in the Dixie *Farmer* advocates the application of the oxide of iron to the soil about apple trees, with a view of increasing the color of the fruit. He says that very deep red clay underlies one part of his orchard; under another part the clay is not so red (the red color is certainly imparted by the oxide of iron). The fruit in the red clay is more highly colored than on the lighter. Some ten years ago he applied anvil dust, cinders, etc., to the soil under certain apple trees; the effect, for several years, was more highly colored fruit than formerly.

[Let our fruit growers try this experiment; they will find it will prove as stated above.—Ed. F.]



NEW CROP, 1870,

FOR THE VEGETABLE AND FLOWER GARDEN.

Grass Seeds; Field Seeds, Evergreen Plants, Roses, Dahlias Verbenas, Gladiolus, Grape Vines, Small Fruits, Asparagus, Roots, Early Potatoes, Onion Sets, Books, Implements, &c.

DREER'S GARDEN CALENDER containing full descriptive lists of the above, with directions and illustrations will be mailed on receipt of a postage stamp.

BOUND VOLUMES FARMER

☞ Volumes of the "California Farmer" for The last EIGHT YEARS, uniformly bound, can be had at the Farmer Office at $3 per Volume.

These Eight Volumes contain more useful matter touching the practical workings of Agriculture as adapted to California Culture than any Book or Books Extant, as they comprise hundreds of Experiments, Letters and Essays upon the Culture of Cotton, Rice, Coffee and Tobacco; Grapes, Strawberries, and all other Fruits, with the Culture of Hops, Castor Beans, Flax, Hemp, &c. and the Whole series of Essays of L. Prevost on Silk Culture, from early beginning.

This set of Volumes would be a Library of itself and invaluable to the Cultivator of the Soil.

Orders sent to Farmer Office will be promptly attended to

VALUABLE PLANTS FOR SALE.

☞ Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and to so cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, to gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us. WARREN & CO.,

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING .....FEB. 10, 1870.

THE CALIFORNIA FARMER READING ROOM, AND MUSEUM OF NATURAL HISTORY.

320 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING:

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion, twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SAMPLE COPIES.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination hoping our paper will meet their approval and induce them to subscribe, and to ask their neighbors to subscribe also.

Send for Sample Papers and get up a club. Address

PUBLISHER CALIFORNIA FARMER,
San Francisco, Cal.

Editor's Chair,

MRS. STOWE'S VINDICATION.

We have published the Letter of this distinguished Lady, whose able writings are known world-wide, (and whose honored name is as widely revered and cherished because) its words of earnest truth will carry conviction *of her being in the right all the time*, and the "Byron Matters" will assume new forms, under the light of her New Book just issued from the Press. We rejoice that this this Journal never joined the cabal against this noble Lady or ever uttered a word save in her praise.

OUR SUBSCRIBERS.

We know our patrons will highly appreciate the excellent Essays of Hon. Horace Greeley, which we are now publishing from his *famous Tribune*, a newspaper that has *no superior* in the world for general and extensive news. These Essays we shall give every week, and *we* think these alone are worth *several times* the *cost* of the FARMER.

LETTERS ABROAD.

The very interesting Letter of our European Correspondent presents many very interesting subjects worthy the attention of our Farmers. We see by this Letter, the great interest shown by Napoleon, and European powers, for the interests of the working people.

"JENNY DARE."

We have Letter No. 16 from our correspondent, which is marked for our next. Many letters just received shall have due attention.

Woman Suffrage—We place in our columns a very interesting Report of the Womans Suffrage Convention in our City, from the pen of the ready writer "ZORA"—it will be read with interest.

Wyoming—will furnish food for thought.

"Minerva Glen," in our next.

"Going Round in a Wagon," next week.

VALENTINES DAY.

This Saint, when the day was inaugurated, never dreamed what a vast amount of Valentines would be scattered all through the streets of San Francisco, nor of the expense and trouble that would be caused to young men and maidens, and old ones too, by their various messages, tender and loving, conveyed by private hand, express, and carriers liveried for the purpose.

St. Valentine will have a great deal of trouble to answer for, and many a heavy toll to pay, for the Voices are now in the air, like the Wind spirits at Music Hall, that toss about the musical instruments in the air And these voices say, as each messenger comes to the door with the looked for "Billet Doux,"

A Valentine! a Valentine! 'tis mine, 'tis mine,
Oh yes, Oh yes, for me a voice of thine,
It whispers, yes, but I dare not tell,
It whispers to me—'tis well, tis well.

St. Valentine's day will be observed in our State on *Monday* next, with more than usual interest. So says the news of the day.

SEEDS, PLANTS, ETC., BY MAIL.

The following are the rates by Law:

For all parcels of *four ounces*.....	2 cts.
" " *eight ounces*.....	8 "
" *one pound parcels*.....	8 "
" *four pound* "	32 "

No parcels to be above *four pounds*.

All parcels should be carefully done up and sealed.

It certainly is to be hoped that all persons who thus send *perishable* matter will enclose in oilcloth all parcels that are likely to cause dampness, and *never abuse* Government liberality by making the *Mail bags* like the *Steamer* or *Railway cars* the medium of *all* their business.

RAINS, DROUGHTS, ETC.

We hear (by the newspapers) of Droughts down South and in other sections of our State, and it is undoubtedly true that there is suffering in many places, and loss of Stock and of Crops.—But do we not hear the same every year? The Farmers and the Stock Raisers of our State—if they *Keep a Diary of the Seasons*, as is so strongly urged in the excellent Essays of Horace Greeley, now published weekly in *this Journal*, and as has been urged by this Journal for years—would obtain valuable guards against these events by preparing for a Dry Season.

If Stock Raisers (where herds are not too large) would raise a few acres of Sugar Beet, Ruta Baga, Sugar Cane, etc., they would be prepared for a Dry Season.

By and by our Stock Raisers will find that Stock raising can be more profitably carried on in our more moist counties, our mountain sides, and in our mountain valleys; and these hot and dry Counties down South and elsewhere should be devoted to the cultivation only of the Grape, Orange, Fig, Prune, and Date—as fruit—and to Cotton, Tobacco, the Ramie, Castor Bean, Hop, etc. These all reral in hot summers, and then, under a wise system of *deep cultivation*, they will prosper, and prosper, too, *without irrigation*.

In years to come, when our Southern Counties and all our *dry* Counties (dry by reason of shallow or no Culture) shall be built over and thoroughly cultivated, moisture will be more abundant as the result of good Cultivation.

No one assuredly can regret more deeply to hear of the loss of Stock or Crops than ourselves, but we know that most of this loss could be avoided by a more intelligent and thoughtful system of Care and Culture; and even now the total amount of any loss that can possibly occur, (for it is much exaggerated,) it cannot affect but as a drop, in the great general prosperity that must flow over our State by the abundant HARVEST OF 1870.

SILK CULTURE

We invite special attention to the interesting and valuable Letter of F. Berton, Esq., of the Banking House of Hentsch and Berton, of whose exportation of Silkworms' Eggs we spoke *two weeks since*.

Mr. Berton's ideas are sound upon this question, and we agree fully with him that the grower should depend upon his own industry for success, and not upon the State Bounties.

We also agree with him in all the leading points in his Letter. It will be remembered by our readers that it was the Firm of Hentsch and Berton that generously stepped forward and purchased the Silkworms' Eggs of 1868 for shipment alluded to, and of which we spoke, and here we take the opportunity to correct an error in our columns of two weeks ago, wherein we said this firm exported Cocoons; it was a printer's error. It was intended to say Silkworm's *Eggs*—not Cocoons.

Our State and the "Silk Growers" are much indebted to Messrs. Hentsch and Berton for aid and encouragement always liberally extended to this enterprise.

THE CURRENCY QUESTION.

The recent decision of the Supreme Court of the United States has now settled the "Currency Question." It establishes contracts, all made before the war, as payable *only in Gold*, and the issue of Greenbacks being a necessity, it does not and cannot vitiate contracts among men.

Our Specific Contract, and the general understanding among all business men, supported by this decision, is, *Gold only* is understood as legal tender.

Our neighbor of the *Alta*, in its wisdom, thinks the result of this decision will be to *depreciate* the value of Greenbacks. We believe it will be just the reverse, for this decision in our opinion makes them of more value.

The present rapid reduction of the National debt, and the certainty that the entire property of the United States is pledged for their redemption, with the knowledge that the interest on United States Bonds is always paid promptly in Gold, and always will be, and the evidence *that every dollar* of the National indebtedness will be paid in Gold, must most certainly increase their value, for there is no better security in the world than U. S. Bonds and U. S Securities.

GREAT RESULTS FROM LITTLE THINGS.

A flash of lightning, a prowling incendiary, a demented inebriate, a vindictive enemy, a dishonest neighbor, a careless employee, a forgetful servant, a negligent watchman, a thoughtless child, a defective flue, a rusty stove-pipe, a villainous illuminator, a sweeping disaster, an insidious match, an inconsiderate smoker! These are the Initiators to Fire, Disaster, Loss of Life and Ruin; and the first duty of every Parent, Housekeeper, Merchant, Business Man, Farmer, Manufacturer and Mechanic is to guard against the evil and often fatal results that flow from these "*Little Causes*."

There is but *one safe way*. Always keep fully insured and at a RESPONSIBLE OFFICE.

REMEMBER

That every day, through one of these and kindred agencies, an average of more than

One Hundred and Fifty Thousand Dollars

Is swept away by fire in the United States alone!

OVER FORTY MILLION DOLLARS
Annually!

Read the Prosperous Condition of the Pacific Insurance Company.

EARLY BLOSSOMING

By letters received we learn:

ALMONDS in blossom at *Vallecito*, February 2d.

ALMONDS in blossom at Marysville, February 3d.

BLACKBERRIES in blossom in this City, Feb. 1st.

OUR NATIONAL FLAG.

Our Stars and Stripes, long may they wave,
"O'er the Land of the Free, and the Home of the Brave."

The two splendid Banners made by the Pioneer Silk Manufacturer, Neuman, are completed—the one for our STATE CAPITOL the other for our NATIONAL CAPITOL.

Thus CALIFORNIA furnishes the first two magnificent American Flags ever made in America of American Silk, reeled from Cocoons raised, and the silk spun, and flags completed by the genius and skill of Californians.

The beautiful Flags of California product are believed to be the largest and most beautiful ever made. They will do honor to our State and our Nation, as emblems of our capacity both in products, in manufacture, and in taste

These Flags are also a great credit and honor to the Neuman Brothers, who have persevered against many difficulties until now they have accomplished a most honorable testimony of their ability and skill.

The Flags are both 36 feet long by 20 feet wide: with their *seven* crimson and *six* white stripes, representing the 13 original States, and the glorious Blue head piece with the *Thirty-eight* golden stars representing the present galaxy of States.

These Flags contain each Eighty yards of the richest and heaviest silk. One hundred feet of heavy silk cord are for the Halyards. The silk for embroidering the stars required 2½ pounds each. These entire Flags, every portion of them, even to the coloring, was performed in the Manufactory of Neuman & Brother, commencing with the cocoon as it came from the silk worm

The value, intrinsically, of these two Flags, manufactured thus with extra care, as emblems for our own STATE and for our NATIONAL Capitol, is FIVE THOUSAND DOLLARS, and we, as a citizen of California, feel proud, with thousands of others, that CALIFORNIA will thus have floating over the Dome of our National Congress such a proud emblem of California.

PACIFIC MEDICAL AND SURGICAL JOURNAL.

We have received the last number of this most excellent Medical Journal, and we are pleased to know that this Journal has now fallen exclusively into the hands of Dr. Gibbons and Son, who are so well qualified to make it a success and to establish it as one of the prominent Periodicals of our State.

We herewith select the address of the Editors, and trust the appeal will be sustained.

We also select two articles from that Journal as most happy hits at the *Humbuggery* that travels around our streets, or is painted upon many a sign where Quackery prevails. Doctor G. has the power to issue another "Gibbon's Rise and Fall'—if not of the "Roman Empire," he can *of the Quackery of* 1870.

INTRODUCTORY ADDRESS OF THE EDITORS.

To our Patrons.

The manifestations of sympathy and cordial support which come from all quarters, on the occasion of our taking the *Journal* again under our exclusive control, are grateful to us beyond expression. So extensively have our brethren greeted us with words and deeds of encouragement as to remove all doubt of the success of our enterprise. We are more than ever proud of our profession, and we shall spare no effort to render to the patrons of the *Journal*, through its columns, a practical return for their aid and sympathy.—We think it may be safely asserted that there is not a medical journal in America of which so large a proportion of the contents are written out by the Editors, or on which a greater amount of labor is expended by them in proportion to its size. Most assuredly our endeavors to render it useful to the subscribers shall not be relaxed.

FOOL-KILLERS ON THE INCREASE.

"Doctor Doo Shou Laong" advertises in the San Francisco papers to cure "all diseases and complaints," and to give advice and medicines gratis for one week. Dr. Li po-tai has postponed his trip to Ohina, and has taken Dr. Le Ching into partnership. Precautions against impostors who style themselves Hs. doctors. Dr. Von Eisenberg, whom we pecussed in this Journal, and who subsequently disappeared in the night, has sent back his ghost in the person of Dr. ——. Dr. —— "uses all kinds of witchcraft, cures all diseases and spells, causes love, returns anything that is stolen, lost, or runaway, cures drunkards from drinking, and will give love and luck to all who want it." The *King of Knaves* has had quite a run for a month or two, and will probably run still faster in a short time.

IS IT CLASSIC OR IS IT DOMBAST?

Medical writers may be arranged in two classes—those who strive to be understood by as many readers as possible, and those who endeavor to be understood by the smallest possible number. To the latter class belongs a learned member of the Massachusetts Medical Society, who writes on "*Myxoma, or Hyperplasia of the Villi of the Chorion.*" Such flourishes of erudition always bring to our mind one of *Punch's* jokes, representing a little boy teaching his aged grandmother how to break an egg. "You see, grandma," says the urchin, "you apprehend the ovate production between the thumb and index finger of the dexter hand, and impinge the extremity against some callous body, so as to fracture the calcareous integument," etc. "Dear me!" the old lady exclaims, "in *my* day we hadn't half that bother. We just smashed it on the table, and it was done."

MUSIC! MUSIC!!

GRAND CONCERT AT SACRAMENTO.

We are always truly glad to see that our own CALIFORNIA ARTISTS are duly appreciated, even when we have in our midst some of the most renowned of the Old World.

We are glad also to know we have now a kind of Musical atmosphere prevailing around us—the distinguished "Ole Bull" and the noble and generous "Camille Urso" now preparing for the GRAND MUSICAL FESTIVAL.

These, we trust, will all have a tendency to create a better and higher appreciation of Music, the great Harmonizer of the world's discordant elements.

"There is in souls a sympathy with sounds,
And as the mind is pitch'd the ear is pleased
With melting airs or martial, brisk or grave."

Divine interpreter thou art, Oh Song!
To thee all secrets of all hearts belong.

THE LAEMLIN CONCERT.

We claim by the name of our Journal to be the advocate of Science and also of Art, therefore we feel it a duty to advance the best interests of the glorious science of Music, for it is the Voice of Nature. The *Good Book* says, "The trees break forth into singing," therefore are we in duty bound to plead for Music.

The Laemlin Sisters, who are announced to give a Grand Concert at Sacramento on the 15th, (next Tuesday) are true Californians, educated in our midst, and, for their high merit as most accomplished artists, should be nobly sustained.

We are most happy to see by the Sacramento Journals the announcement of their Concert, and also are glad to see that our Chief Magistrate, our Senators, and our Assemblymen, and the Citizens, have tendered them a Complimentary Concert. The handsome Letter Complimentary we here append:

CORRESPONDENCE.

TO THE MISSES EMMA AND REBECCA LAEMLIN:

It having come to our knowledge that you are about to depart from San Francisco for the East, we take this opportunity of testifying to the esteem in which we hold you as ladies and artists by requesting you to give a Concert at the City of Sacramento, during the session of the Legislature, in order that Californians may see the proficiency which young ladies, educated in California, can attain in the Science of Music.

We remain your sincere friends—

REPLY

San Francisco, Jan. 31, 1870.

Gentlemen—It is with a deep sense of gratitude that we undertake to reply to the kind notice you have been pleased to take of us. We realize most sensibly the honor you have shown us in the request that we give a Concert at the City of Sacramento, during the session of the Legislature, and we shall ever aim to prove ourselves worthy of your encouragement. Stimulated by your notice of us, we shall endeavor to prepare such a Concert as shall meet your approval and that of the public, and to this end we most gratefully accept your invitation, and name TUESDAY, February 15th inst., at the Congregational Church, for the Concert.

With the highest respect and consideration,

We are, most gratefully Yours,

EMMA LAEMLIN,
REBECCA LAEMLIN.

INFORMATION ABOUT CALIFORNIA.

We would suggest to many of our Eastern Journals, especially in the Rural Districts, and more particularly our Agricultural exchanges, that if they desire to enlarge the CALIFORNIA INTEREST and feeling, which is general, they can do so by giving their readers the CALIFORNIA FARMER a connection with their own paper, and thus increase their own subscription list We will offer them liberal rates in order to give this now desired interest to the many inquirers about California in all the Eastern, Middle, and Western and Southern States. We shall be glad to club with all good journals, on liberal terms. Several of our Exchanges place the FARMER on their list, and club with us.

From the *Western Agriculturist*, a live paper among our beautiful Prairies, we clip the following kind notice of the CALIFORNIA FARMER—this tells the influence of the FARMER abroad.

"The CALIFORNIA FARMER, a large, well conducted weekly, and is of unusual interest. Since the completion of the railroad to that golden country we learn more about the rich agricultural resources of that country from this paper, than from any other source."

LETTER ON THE SILK INTEREST.

SAN FRANCISCO, February 9th, 1870.

Col. Warren, Editor of the Farmer:

DEAR SIR—It is nothing but justice to give you credit for your perseverance in promoting every Agricultural or Industrial Interest in this State no man has dispensed more energy since the early days of California in advocating what may prove a source of wealth to the country than yourself, so will you allow me to give you my own ideas about the silk interest, which will be in future one of the principal Industries of our people, and consequently add to the common wealth of the State.

In your issue of January 27th last, you spoke of our exportation of silk worm eggs in 1868, which proved a failure on the money question.

That is very true; but I must state, those eggs could not be imported in Europe at a worse moment. That year the French and Italian agents had exported from Japan double the quantity required by silk makers, and the eggs bought at $3 per ounce in Japan were sold in France at 25 and 30 cents per ounce, ruining the importers. It is reported that over a million of dollars were lost by them.

Our California eggs came just at that time, and not being known yet had to be sold at less, but brought even a better price than the Japanese.

Now you see the egg exportation is a very risky business, besides the risks of travel, and I would advise the raisers to hatch their eggs and make cocoons, which can always be sold at a good price in any quantity, here or in Europe, better than trying to sell their eggs on a large scale for exportation.

I think there are enough mulberry trees in the State to feed a large quantity of worms. It is a fact, that when the production is forced the quality becomes inferior. If the raiser is to make the largest quantity of eggs to sell at so much per ounce, he will neglect the proper care and the proper coupling of the butterflies, produce inferior eggs, and give a bad reputation abroad to our eggs. I have no doubt the malady which desolates the sericole countries in Europe comes not only by food but by over-production.

Let us then give all our attention to the proper care of the worms, to obtain fine silk, and export only the eggs which we cannot hatch for want of food or accommodations.

When this industry will be fairly established in California, this surplus of eggs will form a large item, but at present an important exportation will retard our progress as silk makers.

Let no man get into that business with speculative purposes to secure State bounties, but to promote the State's and his own interest by adding a new production to our soil, and a new source of revenue. His perseverance will be well rewarded, and in a few years California will be known as a Silk producing country.

I heard that a European Government thinks of sending proper persons here to establish this business on a large scale, and save some breeds which are dying out in Europe. It will give us a new impetus, and we can become, by-and-bye, the chief supply of sericole countries, as sickness is already prevailing in the eggs exported from Japan.

Excuse my intruding so long and taking so much space in your paper, my intention was to write you a few lines, but the subject carried me further than I thought.

I remain, Dear Col.,
Yours truly,
F. BERTON

Acknowledgements.

Articles Received at the California Farmer Exhibition Rooms, No. 320 Clay Street.

ADJUTANT GENERAL'S REPORT.

We acknowledge the Report of the Adjutant General of California, being from October 31, 1867, to November 1, 1869—embracing a complete list of all the Military Operations of our State, and all matters connected with this important protective power.

The Reports are each complete—the Volume of interest, and highly creditable for its fulness of detail. We return thanks for the courtesy.

THE OVERLAND MONTHLY

With its full quota of California treasures constantly being brought out of the "mines" of California—the Gold, Silver and Precious Jewels from the mental placers and rich deposits of California, that only need *working* to prove them valuable.

THE EUROPEAN MAIL

Comes to us with all its important summary of news from all parts of the world, which we shall now regularly lay before our readers.

THE HOUSEHOLD.

An excellent Family Magazine in its *third volume*, we find a most excellent magazine worthy of universal support.

COMPLIMENTARY.

We acknowledge the receipt of Tickets to the Lecture of Mrs. M. Field, at Platt's Hall, February 15th,—the Subject: a Woman's Idea of Woman's True Position—for which we return thanks.

We have received so many of these courtesies of Cards to Readings, Lectures, &c., that it was impossible either to acknowledge all or to attend all, yet we are grateful for these courtesies.

CATALOGUES RECEIVED.

We have received the following:

R. H. Allen & Co.'s New Seed Catalogue, Illustrated, New York.

Thorburn & Co.'s New Seed Catalogue, Illustrated, New York.

James Vick's, New Seed Catalogue, Illustrated, Rochester, N. Y.

Dreer's New Seed Catalogue, Illustrated, Philadelphia.

J. Vanderbilt & Bro's., New Seed Catalogue, Illustrated, New York.

OIL CAKE MEAL!

THE BEST FEE KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal, and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz. Indian Corn Meal, 11 per cent; Barley Meal, 13 per cent; Oat Meal, 18 per cent; Oil Cake Meal, 25 2-100 per cent. For life-sustaining properties to all stock [illegible] and to sudden changes of weather or over-driving! [illegible] equal

For MILCH COWS particularly valuable, increasing the quantity of milk and giving it a quality to a far greater extent than any feed known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food; generally mixed with the meal of bran, slops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase the bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and gloss of the hair

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality

At present price ($25 per ton,) it is the cheapest feed in market. It is now selling in New York at $42 per ton, gold; at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meat from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

PACIFIC OIL & LEAD WORKS,

NOS 8 AND 5 FRONT STREET,

3218 San Francisco.

Jackson Michigan

WAGONS.

The subscribers are now in receipt of a large and full assortment of the above WAGONS.

ONE HUNDRED

IRON AXEL, size 1½-2-2½-2½-

SHELL SKEIN, " 3½-3½-4-inch.

The JACKSON WAGONS have been sold by us for years, and with increased reputation.

The MANUFACTORY being one of the LARGEST in the United States—are enabled to keep a stock of TIMBER seasoning for years, the low cost of which, makes it no inducement to work in any imperfect material.

These WAGONS are the best and cheapest FARM and TEAM Wagons ever sold in this Market—can be used as HEADER WAGONS.

We will guarantee them to stand in any climate.

ALSO—FOR SALE

The SEYMOUR and MORGAN, or NEW YORK REAPER, which has stood the test for twelve years —the Strongest and Best Reaper in use.

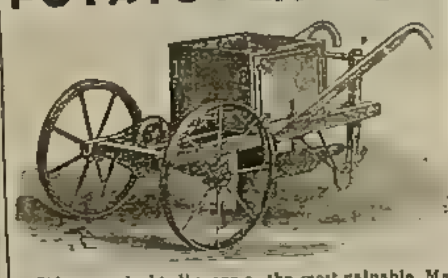
—ALSO—

PLOWS of all kinds. CULTIVATORS—HOES RAKES—HARROWS, Etc., Etc., all of which will be sold at reduced prices.

J. D. ARTHUR & SON, Sole Agents.

3 tf. Cor. California & Davis Sts.

TRUE'S IMPROVED POTATO PLANTER,



This is, undoubtedly, one o the most valuable Machines adapted to Agricultural purposes ever introduced.

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such sized slices as the farmer may prefer; drops these pieces with the most perfect regularity, and covers them perfectly, and does all this as fast as a horse can walk over any ground that can be plowed

No intelligent farmer can fail to see that an implement with which one man can, with the aid of a horse plant six acres of potatoes in a day, is of inestimable value; because the days in which PLANTING can properly be done are very few, while he has all SUMMER and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attending to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune with it

Particulars and Catalogues can be had at our office.

WARREN & CO.,

320 Clay street, up stairs.

TYPE FOR SALE.

The Type which now prints the FARMER will be offered for sale, as we intend to print on NEW CALIFORNIA TYPE.

The quality of the Type can be seen by reading the FARMER. Any one wishing a good bargain can have one by calling at once at our office, or addressing EDITOR FARMER

Miscellaneous.

Farms and Ranches,

—AND—

LANDED ESTATES FOR SALE.

☞ Now that we have so many new settlers of the better class coming to our State, those who have

FARMS, IMPROVED HOMESTEADS,

LANDS, RANCHES, &C.,

Should now make them known extensively, and in no way can they do it more effectually than by

ADVERTISING IN THE FARMER,

As we are now sending to thousands of readers in the other States, as well as at Home, our JOURNAL, the advertisements appearing in our columns will be read in all the principal Merchant's Exchanges in the Eastern States and Europe, as well in the best private Reading Rooms and Libraries of the United States.

Advertisers will be wise that consult our columns.

☞ One thing is certain:—No disreputable Advertisements can appear in our Journal. 33 1

EARLY ROSE POTATOES.

A Splendid lot of these,

Best of all Early Potatoes,

And raised here in California can be had at the

New York Prices.

We invite all Potatoe growers to call and see them at our office, where we can show them a sufficient number of testimonials as to their Quality and Productiveness to convince all that the EARLY ROSE is the very

BEST EARLY POTATOE KNOWN

One of the grand features of this wonderful Potatoe is that it succeeds most admirably in high, dry lands—Some grand results we have here in reports now to be published.

Those who want Pure Seed of California growth, and at New York rates or what it would cost to bring them here, can have larger, fairer and fresher Seed than any that can be imported.

For Sale at FARMER OFFICE,

320 Clay Street, San Francisco.

IMPORTANT

—TO—

Nurserymen, Gardeners and Amateur Florists.

We beg to announce the arrival of the choicest and best assorted collection of

Rare Seeds

ever received on this Coast They have been selected with the greatest care, from the first houses in Europe, and are comprised of

EVERGREEN, AND DECIDUOUS TREES AND SHRUBS, RARE AND BEAUTIFUL PERENNIALS, BIENNIALS, ANNUALS, ETC,

Also, new and choice Vegetables; the assortment is worthy the attention of all who admire the beautiful; and also the particular attention of gardeners who are anxious to secure something rare and new in the Vegetable kingdom.

We shall send them out in small parcels or individual packets, so that many may have the chance of securing the collection. Orders executed in rotation, and carefully packed for mailing any distance.

Persons remitting us Five Dollars, will have collections of Seeds sent them, worth intrinsically double the amount.

Agents Wanted.

We want good Agents for every County in the State to canvass for this Journal.

We wish to employ good, smart, capable, intelligent men—those who have common sense views upon the VALUE OF OUR AGRICULTURAL INTERESTS.

To persons of general information, and of active habits and courteous manners, a very liberal salary can be earned.

None need apply who cannot bring undoubted references. Apply to

EDITOR FARMER.

Miscellaneous.

NEW AGRICULTURAL BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz.: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and to which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS in those parts needing such illustration; so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

THE FIELD AND GARDEN VEGETABLES OF AMERICA By Fearing Burr. Containing descriptions of all Vegetables, their different species and varieties grown in this country, with full illustrations of them.....Price $5 00

Advertising Abroad!

WE CALL THE SPECIAL ATTENTION OF ALL Manufacturers, Agricultural Men, Nurserymen, Booksellers, and others having interests connected with the PACIFIC COAST, that now is the time to secure the business of this region by wisely ADVERTISING WITH US.

The full effects of the completion of that Grandest of all HUMAN ENTERPRISES, the PACIFIC RAILROAD, must open a large and wonderfully increased business between the Eastern States and the Pacific Coast, and they who wisely ADVERTISE NOW, will be the FIRST TO SECURE IT, and when once secured, they can HOLD ON TO IT.

We therefore invite all those who have valuable IMPLEMENTS, MANUFACTURES, INVENTIONS, BOOKS, PAINTINGS, etc. to the Columns of the CALIFORNIA FARMER, that will give them a wider circulation than any other medium they can adopt.

WARREN & CO., Eds. and Prop's.

Home Miscellany.

"THE BLESSED BABY."

Do you think if I'd a baby
That I'd let him pull my hair?
Do you think I'd put on collars
Just for him to soil and tear?
Do you think I'd call it pretty
When he bit his little toe?
Yet I've known some silly mothers
With their babies do just so.
Do you think I'd set him crying
Just to see his cunning frown?
Do you think I'd set him walking
Just to see him tumble down?
Would I call my baby pretty
When he'd neither teeth nor hair?
Yet I know some silly mothers
Think their babies wondrous fair.

THE SKEIN.

BY ROBERT BUCHANAN.

Slip, yes, slip your skein, my Kitty,
O'er my hands, and wind and wind,
All the while, with little pity.
Tangling, tangling heart and mind;
Kitty! eyes upon the wool!
Not on me, my beautiful!

Now you droop your eyes completely,
Winding, winding dreamily;
Wherefore, wherefore smile so sweetly
On a thing that cannot see?
If you must smile, smile this way—
I will bear it as I may.

Ah! the rosebud fingers flitting
Swift about the colored ball!
How my heart beats time while sitting!
Still I try to bear it all.
Kitty, do you know or care,
'Tis my heart you're winding there?

Kitty, I am in a vision!
All the world to mist doth die;
Only, in an air Elysian,
Little fairy fingers fly:
Surely, if they flit too near,
I shall catch and kiss them, dear.

Tangled! pout not, fret not, Kitty!
Though I gladly bear the pain;
For your anger is so pretty,
It may make me sin again.
There! 'tis well. Now, wind and wind,
Tangling further heart and mind.

Now, 'tis done! the last thread lingers
Sadly from me, slow to part:
Canst thou see that in my fingers
I am holding up my heart?
Wind and wind: I do not care!
Smile or frown—and I will bear

Ah! so fast and quick you wind it
I no more can keep it mine;
Do you wonder that you find it
Throbbing now, close, close to thine?
Tangled, tangled are the twain;
Kiss, kiss, kiss them free again!

WYOMING.

"The old maids of New England, who are raving about Suffrage, had better go out to Wyoming."

Thus says a contemporary. The suggestion, though a sneer, is a good hint which may be without sacrifice of dignity, accepted.

Why should not hundreds of hard-working, poorly paid women, who have few family ties here go there, and make to themselves homes and positions for the future? A home is the very first requisite for a woman; it is not the women or girls who have homes who fall into vice. By a home, we do not mean merely four walls and a roof, but a real home, with all its harmonious, loving surroundings. Books, pictures, flowers, music, and last, though by no means least, children. All pictures are not on canvass; the sun throws many beautiful ones on our walls, and the birds are everywhere, so are homeless children.

Why not go to this new territory, take up land enough for a home where just and equal laws invite, where you will be at once citizens with all the honors and functions of citizens

A lady who visited the territory last summer reports it as one of the most delightful portions of our country. Lofty mountains, rich valleys, pure water, and an equable climate.

A hundred or two of women, with good practical talents, neither ashamed nor afraid to turn their hands to any kind of work, would be a blessing there. And when their homes are ready let them send on for the orphan children that are pining and dying in orphan asylums, because they are not homes, because there is not mother's love enough for all; their little hearts, sensitive and tender, yearn for more love than a Matron, however kind, can give to the great numbers that must change often. Indeed, it is a study not to love too much where the intercourse must be broken up and is uncertain of a month's continuance.

Let the great beautiful West be enriched by sending to them noble women and loving children. Let them find homes there, and feel that this new land, which has just and equal laws, is theirs for an inheritance. Let the Women's Mutual Aid Societies forming think of these suggestions.—P. W. D., in *Revolution*.

The Springfield *Republican* thinks Amherst will be the first of the Massachusetts colleges to admit women as students, and that their names may appear in the next years catalogue.

MRS. STOWE'S VINDICATION.

The interval since my publication of "The True Story of Lady Byron's Life" has been one of stormy discussion and much invective.

I have not thought it necessary to disturb my spirit and confuse my sense of right by even an attempt at reading the many abusive articles that both here and in England have followed that disclosure. Friends have undertaken the task for me, giving me from time to time the substance of anything really worthy of attention which came to view in the tumult.

It appeared to me essential that this first excitement should in a measure spend itself before there would be a possibility of speaking to any purpose. Now, when all would seem to have spoken who could speak, and, it is to be hoped, having said the utmost they can say, there seems to be a propriety in listening calmly, if that be possible, to what I have to say in reply.

And, first why have I made this disclosure at all?

To this, I answer briefly, because I considered it my duty to make it.

I made it in defense of a beloved, revered friend whose memory stood forth in the eyes of the civilized world charged with most repulsive crimes, of which I *certainly* knew her innocent.

I claim, and shall prove, that Lady Byron's reputation has been the victim of a concerted attack, begun by her husband during her lifetime, and coming to its climax over her grave. I claim and shall prove, that it was not I who stirred up this controversy in this year 1869. I shall show *who did do it*, and who is responsible for bringing on me that hard duty of making these disclosures, which it appears to me ought to have been made by others.

I claim that these facts were given to me unguarded by any promise or seal of secrecy, expressed or implied, that they were lodged with me as one sister rests her story with another for sympathy, for counsel, for defense. *Never* did I suppose the day would come that I should be obliged to so cruel an anguish as this use of them has been to me. Never did I suppose that—when those kind hands, that had shed nothing but blessings, were lying in the helplessness of death—when that gentle heart so sorely tried and to the last so full of love, was lying cold in the tomb—a countryman in England could be found to cast the foulest slanders on her grave, and not one in all England to raise an effective voice in her defense.

I admit the feebleness of my plea, in point of execution. It was written in a state of exhausted health, when no labor of the kind was safe for me—when my hand had not strength to hold the pen, and I was forced to dictate to another.

I have been told that I have no reason to congratulate myself on it as a literary effort. O my brothers and sisters! is there then nothing in this world to think of but literary efforts? I ask any man with a heart in his bosom, if he had been obliged to tell a story so cruel, because his mother's grave gave no rest from slander—I ask any woman who had been forced to such a disclosure to free a dead sister's name from grossest insults, whether she would have thought of making this work of bitterness a literary success?

Are the cries of the oppressed, the gasps of the dying, the last prayers of mothers—are *any* words wrung like drops of blood from the human heart to be judged as literary efforts?

My fellow countrymen of America, men of the press, I have done you one act of justice—of all your bitter articles, I have read not one. I shall never be troubled in the future time by the remembrance of any unkind word you have said of me, for at this moment I recollect not one. I had such faith in you, such pride in my countrymen, as men whom, above all others, the cause of woman was safe and sacred, that I was at first astonished and incredulous at what I heard of the course of the American press, and was silent, not merely from the impossibility of being heard, but from grief and shame. But reflection convinces me that you were, in many cases, acting from a misunderstanding of facts and through misguided honorable feeling, and I still feel courage, therefore to ask from you a fair hearing. Now, as I have done you this justice, will you also do me the justice to hear me seriously and candidly?

What interest have you or I, my brother and my sister, in this short life of ours, to utter anything but the truth? Is not truth between man and man and between man and woman, the foundation on which all things rest? Have you not every individual of you, who must hereafter give an account yourself alone to God, an interest to know the exact truth in this matter, and a duty to perform as respects that truth? Hear me then while I tell you the position in which I stood, and what was my course in relation to it.

A shameless attack on my friend's memory had appeared in the *Blackwood* of July, 1869, branding Lady Byron as he vilest of criminals, and recommending the Guiccioli book to a Christian public as interesting from the very fact that it was the avowed production of Lord Byron's mistress. No efficient protest was made against this outrage in England and *Little's Living Age* reprinted the Blackwood article, and the Harpers, the largest publishing house in America, perhaps in the world, republished the book.

Its statements—with shots of the *Blackwood*, *Pall Mall Gazette*, and other English periodicals—were being propagated through all the young reading and writing world of America. I was meeting them advertised in dailies, and made up into articles in magazines, and thus the generation of to-day, who had no means of judging Lady Byron but by the fables of her slanderers, were being fully deceived. The friends who knew her personally were a small select circle in England, whom death is every day reducing. They were few in number compared with the great world, and were *silent*. I saw these foul slanders crystallizing into history uncontradicted by friends who knew her personally, who, firm in their own knowledge of her virtues and limited in views as aristocratic circles generally are, had no idea of the width of the world they were living in, and the exigency of the crisis. When time passed on and no voice was raised, I spoke. I gave at first a simple story, for I knew instinctively that whoever put the first steel point of truth into this dark cloud of slander must wait for the storm to spend itself. I must say the storm exceeded my expectations, and has raged loud and long. But now that there is comparative stillness, I shall proceed, first to prove what I have just been asserting, and, second, to add to my true story such facts and incidents as I did not think proper at first to state.

HE COULD BE TRUSTED.

AN EXAMPLE FOR BOYS.

Alfred was missing one night about sunset.—Mother was getting anxious, for she always wished him to be home. A neighbor, coming in, said a number of boys had gone to the river to swim, and he thought Alfred was safe enough to be with them.

"No," said the mother, "he promised me he would not go there without my leave, and he *always* keeps his word. He never told me a lie."

But seven o'clock came, then eight, and mother was still watching and listening for the step of Alfred; but it was half-past eight before his merry shouts and whistle was heard, when he ran into the gate.

"Confess, now," said the neighbor, "that you have been to the river with the other boys, and so kept away till late."

How the boy's eye flashed, and the crimson mounted to the cheeks!

"No, sir! I told my mother I would never go there without her leave, and *do you think I would tell a lie?* I helped James to find the cows which had strayed in the woods, and did not think I should be so late."

James, coming up the street just then, came in to tell us he was afraid we had been alarmed; they had been so far in the woods it made them late in getting home.

"I think," said the neighbor, turning to the mother as he took his hat to go home, "there is comfort in store for you, madam. Such a boy as that will make a noble man."—*Children's Guest.*

HOW TO GO TO BED IN FREEZING WINTER

Do it in a hurry if there is no fire in the room, and there ought not to be unless you are an invalid.

But if a person is not in good health it is best to undress by a good fire; warm and dry the feet well, draw on the stockings again; run into the room without fire; jump into bed, cuddle up, with head and ears under cover for a minute or more until you feel a little warmth, then uncover your head; next draw off your stockings, straighten out, turn over on your right side and go to sleep.

If a sense of chilliness comes over you on getting into bed it will always do an injury, and repetition increases the ill effects, without having any tendency to "harden" you. Nature abhors violence. We are never shocked into health.—Hard usage makes no garments last longer. —*Dr Hall.*

DRUNK BUT ONCE.

"You have but five minutes to live," said the sheriff; "if you have anything to say, speak now." The young man said: "I have to die. I had one little brother. He had beautiful eyes and flaxen hair, and I loved him. One day I got drunk—the last time in my life—and coming home, I found my little brother getting berries in the garden, and I became angry without a cause, and I killed him with one blow of the rake. I did not know anything about it till next day, when I awoke and found myself bound and guarded, and was told my little brother was found dead.—Whisky had done it. It had ruined me. I never was drunk but once. I have only one more word to say, and then I am going to my Judge. I say to young persons, never, never touch anything that can intoxicate." In another moment the young man was ushered into the presence of God.

No person ever got stung by hornets who kept away from where they were. It is just so with bad habits. No person ever became a drunkard who did not visit a grog shop or drink a glass of strong drink.

Santa Clara College, S. J.

Miscellany.

DENNIS O'RAFFERTY'S OPINION OF FAYMALE SUFFRAGE.

Och, he is a baste who opposes the right
Of a faymale to vote whenever she plazes:
For myself, I look forth to the day wid delight
When the polls will appear like a meadow of daisies.

I said to me Kathleen, when from the convention
She came wid a beautiful smile on her face,
Ye'll soon be a lady, and ivery attention
Be shown yez by those who have power and place.

Mrs. Gunnybags thin on yerself will be dotin'
And sayin' yees up to her house, never fear;
And thin in her carriage, when faymales are votin',
Ye'll sit by her side, och! Kathleen, me dear.

It is said that this life, after all, is no bubble.
But not so to me, a thrue son of the sod;
For the years have been joyous, and free from all throuble.
While mixin' the mortar and carryin' me hod.

And I am not jealous, oh, no, not at all!
But welcome from Erin each strong-minded daughter.
To climb up the ladders and walk on the wall,
And share all the joys of the bricks and the mortar.

A FAMOUS SHIP.

Hero, king of Syracuse, built a ship, which, in several points, may have surpassed some of our model floating palaces. The celebrated geometrician, Archimedes, superintended the construction. It had only twenty banks of oars; but we can gain a better idea of the size of the ship, as compared with those common in that age, from the fact that the timber for it would have been sufficient for sixty triremes—the most common ships of war, with three banks of oars. Various kinds of wood, and other articles for finishing, were brought from Gaul, Spain, and Italy. The floors of several of the rooms were composed of all kinds of stones inlaid; and on this mosaic the whole story of the Iliad was depicted in a marvellous manner. "In the furniture, the ceilings, and the doors, everything," says the historian, "was finished in the same admirable manner."

Then there was a gymnasium, and walks, and a garden with all sorts of plants, and a temple with a floor of agate and other most beautiful stones, and with doors of citron wood and ivory, while the adornment was completed with pictures and statues. The drawing-rooms and bathing-rooms were beautifully variegated with Tauromenian marble. The arrangements for various kinds of freight and for engines of war were ample. They put on board sixty thousand measures of corn, ten thousand jars of Sicilian salt fish, twenty thousand talents' weight of wool,—nearly six hundred tons,—and of other cargo twenty thousand talents' weight also. Besides this, there were provisions for the crew.—*Oliver Optic's Magazine.*

A DARK STORY WELL TOLD.

A Situation Open.

The romance of the runaway darkey was quite played out after the people of the North and South had pecked their flints for the final shot.—Once in a while, however, there comes a reminiscence which shows Sambo's native humor, and how irresistible was his hankering for the "boon of freedom." Before the war there came into the bar-room of a hotel in Canada, near the frontier, a bright looking negro, who was thus addressed by one of the eminent persons usually found in such resorts:

"I s'pose you're a runaway slave," said one, looking sharply at the new comer.

Feeling that he was pretty well away from bondage, the darkey responded that he was.

"Ah, indeed; well, we're glad of it; but you don't seem to look very poor—have good clothes down South?"

"Certainly," said the darkey, with some pride. "Same clothes as my master."

"But you got many a good thrashing, eh?"

"Never had a whipping in my life."

"Never thrashed!" said another; "well, but you niggers don't always get enough to eat, do you?"

"Always had enough, gemmen; never went hungry."

"What!" said the interrogator, "good clothes no punishment, plenty to eat. Now," said he, turning to the group, "only think of it!—this fellow has left a position where he enjoys all these privileges for an uncertainty."

"Gemmen," said the darkey, "all I'se got to say respectin' dem privileges is, dat if any wants to avail bisse'f of 'em, *de situation am still open!*—Editor's Drawer, in *Harper's Magazine* for Feb.

WARING THE PANTS.

The following is a "stanzer" from a recent production of the husband of the redoubtable Dr. Mary Walker:

The bird calls from its gilded cage,
Its mate far in the wild wood:
And so my soul still wails for thee,
Bright angel of my childhood.

But if our fate, a cruel lot,
Hath cut our hearts asunder,
Why, Mary—bring my trowsers back!
And then go vote forever!

NEURALGIA.

A new remedy for this distressing disease is announced. It is simply lemon juice taken without sugar—one lemon a day being said to cure the most obstinate cases. How sure the cure is can only be known by experiment, but the medicine is easily obtained, and not "bad to take."

VINEGAR. HOW MADE FROM CIDER, WINE, MOLASSES, OR SORGHUM, in Ten Hours, without using drugs. For Circulars, address F. I. SAGE, Vinegar Maker, Cromwell, Conn.

Miscellaneous.

MERCHANTS'

GARGLING OIL

IS THE

BEST LINIMENT

IN THE WORLD

FOR MAN AND BEAST.

36 Years in Use.

Is good for Rheum tism, Chilblains, Corns, Whitlows, Caked Breasts, Sore Nipples, Cramps, Colls, Bites of Animals Weakness of the Joints, Contractions of the Muscles, Burns and Scalds, Frost Bites, Painful Nervous Affections, Chapped Hands, Lame ack Pain in the Side, Swellings, Tumors, Tooth Ache, Old Sores, Hemorrhoids or Piles, Flesh wounds, Galls of all kinds.

Sprains, Bruises, Cracked Heels, Ring Bone, Poll evil, Wind galls, Callous, Spavin, Sweeney, Fistula, Shiest, External Poisons, Scratches or Grease, Springhalt, Sand Cracks, Lameness, Strains, Founded Feet, Mange, Horn Distempers, Garget in Cows, Cracked Teats, Foot Rot in Sheep, and many other diseases incident to Man and Beast.

R. D. Taylor, of Concord, Ky., says the Gargling Oil cured a horse of his, injured while plowing by attempting to step over a stump, almost severing the thigh from the body; also that he has used it in his family for fifteen years, and is the best remedy for Cuts, Burns, Bruises, Frost Bites, Strains, Rheumatism, etc., he ever used.

From Crump & Bros., Lochrane Landing, Ohio, Nov. 29th, 1856—We are pleased with your medicines. It has been the means of curing a great number of different diseases upon persons, as also upon horses. We think it cures all you recommend it to do. We want you to send us the larger proportion of the variety for "Family Use," in small bottles.

From Dr. J. P. Torrell, Warren, Ind., March 3d, 1856—I am engaged in the practice of medicine, and find your Gargling Oil an extremely efficient remedy in all cases where an external application is indicated.

From Dr. O. B. Neal, Burris, Iowa, 1855—I have practiced medicine in this county seventy years, and cheerfully recommend your Gargling Oil as the best liniment in use.

From Dr. T. W. Ellis, Troupville Ga., Jan. 6th, 1856—If I could receive both boxes of the Gargling Oil it would not be too much, as I think I could soon find sale for it all, the inquiry being frequent since it is supposed that I have it for sale.

From Dr. Wm S McCall, Chamois, Mo., Nov. 9th, 1859—Your Gargling Oil is taking the shine off from all liniments of the day. If you desired them I could procure dozens of certificates from the best citizens of the county.

Messrs. McLain & Bros., Wholesale Druggists, Wheeling Va., say, under date of July 24th, 1856 that they can safely recommend the Gargling Oil for more diseases than it is recommended for.

From J. R. Fisher, Uniontown, Pa., June 31st, 1857—Your Gargling Oil is doing much better here than formerly, since its virtues have become known—and the bottles put up for Family Use, without Stain, are much sought for.

Extract of a letter from Hon. Nathan Lindsey, County Judge of Shelby county, Iowa, dated Harlan, April 18th, 1857. It is decidedly preferred to any other liniment sold in this section.

Extract of a letter from Samuel S. Hupp, dated Fellsburg, Ohio, July 17th, 1856—In June last, Henry Sallie had a yearling colt that had what was supposed to be Diphtheria, for more than ten days, so that it could not eat, and the throat swollen almost shut, and by the use of three or four applications of the dollar bottles, did the desired effect.

From A. G. Nisl, Lewisville, Coshocton county, Iowa, March 1852—I have used your Gargling Oil for the scratches on my horse, and it cured it with the first application.

From Enos Mather, Middleport, N. Y., July 22d, 1850—I purchased a bottle of your Gargling Oil of your Agent, A. S. Baker, at Middleport, and as yet have used but half of it. I think it has given me more relief in a case of severe rheumatism of long standing, than anything I have ever used before.

Extract of a letter from J. O. Pratt, dated Quincy, Chautauque county, N. Y., August 12, 1854—I have been acquainted with your medicine, (Gargling Oil) for the last fourteen years. It has proved to be a sure cure for Foot Rot in Sheep, for which I have sold the last bottle, and have calls almost daily for more. Please forward as soon as convenient.

Always enquire for MERCHANTS' CELEBRATED GARGLING OIL, and take no other.

Retail price, $1 00, 50 cents, and 25 cents.

Shake well before using, and rub on thoroughly before the fire or some warm substance.

The Gargling Oil has been used as a liniment for thirty six years. All we ask is a fair trial, but be sure and follow the directions.

Ask your nearest druggist or dealer in Patent Medicines for one of our Almanacs and Vade Mecums, and read what the people say about the Oil.

The Gargling Oil is for sale by all respectable dealers throughout the United States and other countries.

Our testimonials date from 1833 to 1858, and are unsolicited. Use the Gargling Oil and tell your neighbors what good it has done.

We deal fair and liberal with all and defy contradic

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attaches to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Comb, or Gum:

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

Hucks
Lamb

Is on the red cover of the packages

Railroad Lands.

CENTRAL PACIFIC RAILROAD,
LAND DEPARTMENT.

Sacramento, March 1st, 1867.

The following statement is made for the information of those who desire to purchase Lands from said Company:

1st. Congress has granted to the Company, all the alternate sections of the public lands designated by odd numbers, within a distance of 20 miles on each side of the railroad;—excepting lands to which a pre-emption or homestead claim had attached prior to the 12th of September, 1862, and excepting lands reserved by the United States as mineral.

2d. The Company has no interest in even sections. To constitute a valid pre-emption or homestead claim within the above exception, the party must have resided on the land prior to September 12th, 1862, and continuously since that time. He must also on that day have been over twenty-one years of age and be the head of a family and have filed his claim in the United States Land Office within the time required by law. If he has not these requisites, or has neglected to file, he will have to buy of the Railroad Company.

3d. All persons who desire to purchase lands from the Railroad Company, including settlers, pre emptors, and other claimants, should make application to the Land Agent, B. B. Redding, at the Land Office of the Company, in Sacramento, either personally or by letter, describing the land by legal subdivisions. This application will be filed and the party will be allowed three months to complete the purchase, and during this time the land will not be sold to another without giving such applicant thirty days previous notice. If the purchase is not completed within three months, the land will be open to purchase by others.

4th. Persons who have valid pre-emption or homestead claims to any tract on an odd numbered section, can purchase the same from the Railroad Company at the Government price of $1.25 per acre in greenbacks, and upon the usual credit of five years if they so desire, by filing an abandonment of their claim in the U. S. Land Office, blanks for which will be furnished by the Land Agent of the Company. Such purchase from the Company has these advantages over a purchase from the Government: The party can leave the land if necessary—he can sell or mortgage it—he is saved the payment of lawyers' fees and expenses of witnesses to go to the Land Office to "prove up" his claim—he can get his title perfected in less time—and he can buy on credit at a low rate of interest.

5th. Actual occupants of lands belonging to the Company, will generally have a preference in the purchase at the regular price. No addition to the price is made where there are improvements on the land made by the settler. Where there are conflicting claimants who apply to purchase, an adjudication of their respective claims will be made by the Land Agent, upon due notice given to both parties.

6th. No lands are sold by the Company or the Government, until after they have been surveyed and the plats returned to the Land Office.

7th. The Company sells ordinary agricultural lands at $2 50 per acre, in gold (except sales to pre-emptors as above). Timber lands, lands in the immediate vicinity of the railroad, and tracts having special value above ordinary farming lands, will be sold at prices and on terms fixed by the Board of Directors.

8th. Persons desiring to do so can buy on a credit of five years by paying twenty per cent. of the price down, and interest annually in advance on the remainder at ten per cent. per annum. Thus a purchaser of one hundred and sixty acres at $2 50, which amounts to four hundred dollars, will pay twenty per cent., or eighty dollars, with interest on three hundred and twenty dollars, which is thirty-two dollars—in all one hundred and twelve dollars, paying each year thereafter thirty-two dollars interest, and the three hundred and twenty dollars at the end of five years. His three hundred and twenty dollars can be paid at any time within the five years, but not by installments, and the purchaser will then be immediately entitled to a deed

9th. Applications to purchase lands can be filed in the Land Office of the Company at any time after the same have been surveyed by the Government; but no applications will be acted upon until three months after the maps have been filed in the United States Land Office. Occupants of the railroad lands who desire to purchase should therefore be prompt in filing their applications in the office of the Company within this time. Blank applications will be furnished to all who desire to purchase. No sales will be made except by legal subdivisions according to Government surveys. Purchasers can buy as large an amount of land as they may wish.

10th. No sales are made by the Company until the land is listed over to it by United States Land Officers. Purchasers are thus assured that the title they obtain is perfect.

B. B. REDDING,
Land Agent C. P. R. R. Co., Sacramento.

Corrected Weekly, by EDITOR FARMER.]

SAN FRANCISCO, Feb. 10.

GRAIN AND FLOUR MARKET.

The Wheat Market may be called dull, yet the price of wheat is the same as last week. The amount coming in is small by reason of low water in our rivers.

There has been a few cargoes sent to Europe, the risk of loss was ventured by reason of exceeding low rates of freight obtained.

The principal exports of Breadstuff is to China and Japan, also to the Islands.

Oregon is sending in Wheat and Flour quite lively—as soon as our streams raise, our own grain will flow in abundantly, for with the nearness to new harvest, it would be unwise to "hold on," for there is more wheat on hand in this State than is generally believed.

Whatever may be said of the drouth in some sections of our State, other and large sections promise an abundant harvest by reason of early planting on summer fallowed lands.

PREMIUMS.

THE EARLY ROSE POTATOE.

The wonderful celebrity which is now being attained by the unprecedented excellence of the "Early Rose Potatoe," its great productiveness beyond that of any other potatoe known, its early maturity (7, 8 and 9 weeks) surpassing all others, and its great superiority in *quality*, induces us to try to spread its culture as widely as possible.

We therefore will now offer to every *new subscriber* to the CALIFORNIA FARMER, from the commencement of our new Volume, Four pounds of the "Early Rose Potatoe," mailed to them *free of cost*, as a PREMIUM for 1870. This will give them seed for another year, equal to 200 to 300 lbs.

P. S. All new subscribers to our present Volume who kindly sent their names before this, if they will send us word they will use this seed they shall have the parcel mailed to them free.

RARE FLOWER SEEDS.

We have several fine collections of new and choice Flower Seeds from the well known Florists, "Dreer" of Philadelphia, and James Vick of Rochester N. Y. Those who wish "Gems in Flora," will find them at our Office, No. 320 Clay Street

Shade Trees! Shade Trees!!

ORNAMENTAL & SHADE TREES

LARGE COLLECTION OF TREES.

EXTRA SIZE SHADE TREES.

Elm and Ash Trees.

A splendid lot of very choice and large size ELM and ASH Trees, for PUBLIC SQARES, and STREETS, will be offered in Lots to suit Purchasers.

Mulberry Trees.

Large size Mulberry Trees, White, Red, and MORUS MULTICAULIS, of all sizes, suitable for planting out as Shade or Ornamental Trees, and also as Fruit Bearing, or for feeding the Silk Worm.

The Mulberry Tree makes a handsome Shade Tree, and is an Ornamental and Fruit Tree combined.

These Trees will be sold in lots to suit purchasers.

OSAGE ORANGE TREES.

A few lots of Osage Orange Trees for setting out as Ornamental Trees. Also

SILK WORM EGGS

Of the FRENCH ANNUAL SPECIES, for sale.

The above will be sold on the best of terms.

P. S.—Orders addressed to A. P. Smith, will be promptly attended to.

Sample Trees can be seen at the FARMER OFFICE, where information of the quality of the Trees and the price can be had.

A. P. SMITH.

Of the well known SMITH'S GARDENS,

COMMISSION

SALES-ROOM

— AND —

Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash, or bills could be sent by Express, to be collected on delivery

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our special business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns, and which we have the exclusive sale for this Coast.

We also call attention to the

NEW GATE,

A most valuable invention, particularly to Farmers and Stock Raisers. County Rights for sale.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

The following are the kind of Goods imported or consigned to us for sale and which can be offered on the most favorable terms.

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now offering have been selected with the greatest care, their purity we can confidently affirm with the utmost confidence. In ordering Grass seeds, please state the nature of the soil and the extent of land to be sown.

FINEST MIXED LAWN GRASSES

FINEST MIXED GRASSES FOR PERMANENT PASTURES

FINEST MIXED GRASSES FOR SHEEP-WALKS

FINEST MIXED GRASSES FOR MEADOW-LAND.

PACEY'S PERRENNIAL RYE GRASS,

ITALIAN RYE GRASS,

EUROPEAN RYE GRASS,

PERRENNIAL RED AND WHITE CLOVER,

ALFALFA OR CHILI CLOVER,

KENTUCKY BLUE GRASS.

NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental

TREE SEEDS.

TOBACCO SEED,

COTTON SEED,

COFFEE SEED,

TEA SEED.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

These will be ready in the months of November and December.

Collections can be forwarded by post at the following rates

50 Packets choicest and best		$10 00
25 do	do do	5 00
12 do	do do	3 00
50 Packets Good Selected		6 00
25 do	do do	3 00
12 do	do do	1 50

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference

Silk Culture.

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

FLOWERING BULBS.

Lilies, Tulips, Hyacinths, Amaryllis, Anemones Ranunculus, Narcissus, Tuberoses, Peony, Roots, Crocus, Snow-Drops,

Very Choice Gladioli,

Choice collections of Flowering Bulbs, comprising all the most showy and leading varieties from $5 00 and upwards.

EVERGREEN AND DECIDUOUS SHRUBS,

ORNAMENTAL TREES,

FRUIT TREES.

The newest and most approved sorts:

Pearhes, Figs,
Plums, Almonds,
Cherries, Walnuts,
Apricots, Nectarines,
Pears, Grapes,
Apples, Etc. Etc.

Also the best varieties of Strawberries, Raspberries, Gooseberries, Currants, and Blackberries.

PERPETUAL FLOWERING ROSES

Of the best kinds.

GREENHOUSE AND BEDDING PLANTS.

Any one desirous of having their Gardens look gay through out the season, can be furnished with the plants at a reasonable rate, by applying at this office.

Every information given as to the cultivation of Plants and raising of Seeds, etc. Also respecting the mode and best systems of Pruning all varieties of Trees, etc.

Gardens and Grounds designed and put in order, and every article furnished for same.

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference.

GYPSUM.

(Sulphate of Lime.)

This well known but most wonderful fertilizer has not yet been practically introduced into the Agricultural interests or before the minds of the California cultivators, for the reason that there was no supply, and because it was hard to make them believe our lands needed manuring.

The time, however, has arrived when, by the admitted fact of the deterioration of our soil and the lessening of crops, something must be done to restore the soil and bring it into that state of fertility necessary to make it profitable to cultivate the soil.

Gypsum is a compound of Sulphuric Acid and Lime, and the object of this fertilizer is the Acid of Ammonia, thus making it the direct food of plants, either by supplying the Sulphate of Lime or by its decomposition, affording the Sulphuric necessary to the due development of certain plants.

Sprengel's Analyses shows the quantity of Lime and Magnesia, Sulphuric and Phosphoric Acids to be very large in the following plants, and for them this fertilizer has no superior:

Wheat, Barley, Oats, Potatoes, Cabbage, Swedish Turnips, Clover, Beets, Turnips, and root crops generally; thus ensuring to a certainty its great importance to the Farmers.

Liebig's Natural Laws of Husbandry gives conclusive proofs of its superiority as a fertilizer for Clover and Grasses, furnishing details of experiments made by distinguished men in various parts of Europe.

According to the experiments made by Berthollts, Gypsum is composed of *thirty-three* parts of Lime, *forty-three* of Sulphuric Acid, and *twenty-four* of the water of crystallization.

Gypsum is often called Plaster of Paris, but this is wrong—it only takes that name and character when it has been deprived of its water of crystallization by fire; there it becomes *Calcined Gypsum* or Plaster.

Gypsum for Dry Countries like California, will prove immensely valuable, as when used as a fertilizer in our hot and dry soil, its waters of crystallization are seperated by means of our hot climate and go at once to benefit the plants, while the Acids and Sulphate of Lime is taken up by the soil, enriching it to a very great degree.

The undersigned is now prepared to furnish this valuable fertilizer by the quantity to all who desire to try its well attested virtues.

CHAS. J. JANSON,

222 BATTERY STREET

STILL TRIUMPHANT!

THE COMMITTEE OF AWARDS OF OUR STATE and Mechanics' Fair, aware of the superior merits of the H. & L AXLE GREASE over all imitators, have again awarded HUCKS & LAMBERT their Premium, their article having stood the test for over fifteen years. They are now prepared to sell their well known Axle Grease at as low a price as any other in the market, New York and Chicago not excepted.

P. S.—To consumers—Don't trust to the 1st person you ask for HUCKS & LAMBERT'S AXLE GREASE Depot & Manufactory, No. 144] Natoma Street. 320 Jackson street.

Home Correspondence,

OIL-CAKE MEAL AS FEED.

We take pleasure in giving the following letter from Hon. Thomas G. Phelps, upon Stock Feed. Although a private letter to the Directors of the Linseed Oil Factory, it has been kindly sent us, and we feel that, coming from so high a source, this important information will be acted on by our Dairymen and Stockmen.

BELMONT, February 1, 1870.

To the Directors of the P. L. O. and L. W.:

Gents—You ask some questions in regard to my knowledge of the use of Oil cake Meal. I am forced to answer briefly and in haste. I was well acquainted with its use when a boy, and my experience with it for the past two years has confirmed my earlier impressions. For fattening neat Cattle it is superior, pound for pound, to any feed with which I am acquainted. For this purpose, I estimate its value at double that of Wheat Flour. For milk, it is of more than double the value of Middlings which, as all Dairymen understand, are of little value except for keeping the Cows in condition. I regard it as four or five times the value of Bran; this, however, is too large an estimate, if the quantity, and not the quality, of milk is the object sought.

My feed for the past three months has been Hay, Beets, Bran, Middlings, and Oil-cake Meal. At first, I fed only Hay, Beets, Bran, and Middlings. I then added the Oil-cake Meal, and found it largely increased the amount of butter. I afterwards left off the Bran—with scarcely a perceptible falling-off in butter. Getting out of Oil-cake Meal, I directed the dairyman to increase the amount of Middlings to the extent, in pounds, of the Meal he had been feeding, and the result was a falling-off of more than 10 per cent. in the butter. I then directed him to return to the Oil-cake Meal—to feed a slightly increased quantity, but to drop the Middlings, when it was found the amount of butter made came up again to the old standard. Since then, I have fed only Hay, Beets, and Oil-cake Meal. I should state, in this connection, that I do not feed heavily. My impression is, for butter—a Cow should not be fed more than three or four pounds per day (I feed two), which should be soaked in at least three pails of water, for twenty-four hours, at the end of which time it will become a thick mucilage.

For young Calves there is, I think, no feed equal to it. It may be mixed with their food at any time after they are three days' old, and, after three months' old, may be fed dry or wet, and thrown on Hay. For Horses, it is a healthy and strong food, giving to the hair great softness and brightness, but they will not eat it readily at first, though in time they become very fond of it.

With its use for fattening Hogs, I have had no experience, but I think pork made from it would be soft and inferior, though beef made from it is very superior.

Very truly yours,

T. G. PHELPS.

THE POTATOE PLANTER.

We call the special attention of all who plant Potatoes largely, to the far famed POTATOE PLANTER now on Exhibition at our Reading Rooms.

Persons who plant any number of acres of Potatoes should by all means see this great labor saving machine, as its great excellence would convince them at once of its utility and economy. For particulars of its merits, see the advertisement in our columns.

MINERVA GLEN, February 4th, 1870.

LETTER NUMBER 3.

COL. WARREN:

Dear Sir—"Jenny Dare," your lady correspondent, thinks "Daisy Earl" is a Mormon because the latter says, "The best rights that wives and mothers have, is to be good and dutiful housekeepers, and to make their husbands and children happy." If "Jenny" includes all wives and mothers who think as "Daisy" does, then *Mormonism*, in her estimation, must be a flourishing institution indeed. Said Bonaparte, "What France needs to make good citizens is good mothers."—Another wise man once said, "That every man has engraven upon his heart the image of some woman."

I could quote other sayings of wise men in proof that it has ever been the opinion of the great, that where men are not, they should be, under the influence of good women, but the above will suffice for the present.

By giving the ballot to women it cannot add to her facilities to acquire the ability to educate her sons.

It cannot purify politics, because women are as much, if not more, susceptable to influences than men.

What then will it do? It will lay the foundations for a bitter antagonism between the sexes, endanger the family circle, and pave an approach to the basis of those tender relations ordained by the Creator for the perpetuation of the human race.

Your correspondent, in referring to those thirty thousand females in the State of Massachusetts, says, "they will have to go to Utah to get their best rights," why made she no mention of other States where men are in excess, and where there are plenty of bachelors (as there are also in the "Bay State"), and tell us why they don't seek the women and reduce the disparity.

I am acquainted with a score or more of old bachelors, and from the tenor of their conversations on the subject of marriage, I am satisfied that they feel that the antagonistic element has already commenced with the opposite sex, and that gentle, loving, dependent being, pictured in the dreams of their youth, they see merging into an opponent who could not increase their happiness or add to their peace of mind, and hence they prefer the single state.

The custom of saluting each other in passing is common among men, and means "*We are brothers.*" This is not the case with women. In their walks they seldom notice any one, but pass on, head up and eyes straight, to the front.

This is worse than barbarism. It is a species of contemptuous dignity, the legitimate results of ignorance, folly and bad education. The indifference of American women to their fellow men has contributed much towards this celibacy, and the immorality of many a young man. I do not say that ladies should salute or acknowledge the presence of every "rough," but I *do* say that, if they would use their moral powers with proper discretion, they could reclaim many who are almost lost, and prevent thousands from falling at all,—changing, eventually, the harsh and uncharitable features of modern society altogether to something better. But do that which will make enemies between the sexes, destroy the romance of love and courtship, and you will convert the world into a madhouse.

Allow me to say, in conclusion, that I have not penned these thoughts for the purpose of stirring up angry arguments, but for the impartial consideration of those who are so earnestly engaged in the work of placing women in the political ranks.

The time is coming when the question will be submitted to the "voice of the people." Let us all look at both sides fairly.

Yours truly, A. K.

[The above letter we commend most earnestly to all our readers of both sexes. There are good Home truths well and happily told, and "A. K." has *hit the nail on the head.* He has shown the *cause* of Bachelorism. Let women—by their courteous, social demeanor, draw good, industrious young men towards them and they will soon change the whole face of society. True, that every good man has the image of some woman engraven upon his heart, unless he has become corrupt. Other suggestions of "A. K." are excell[illegible] we hope to hear from him often]

OUR AGENCY—NEW SAN DIEGO.

We hereby appoint W. B. Bancroft, Bookseller at New San Diego, our agent for all that region of rich country now rapidly filling up with a Rural population.

We invite the cultivators of the soil to call at the Bookstore of Mr. Bancroft and examine THE CALIFORNIA FARMER, which they will find a great aid to them in their agricultural pursuits.

We are also glad to recommend this Bookstore to their special attention, where they can always have their minds improved with good books, and all their wants in the Stationary line supplied also.

[Written for the CALIFORNIA FARMER.]

GOING AROUND IN A WAGON.

COL. WARREN—DEAR SIR:

In these days of Railroads and Steamboats, we seem to have almost forgotten that much may be seen and learned by the old fashioned way of "Going around in a Wagon," yet we believe more real knowledge of the country can be obtained in one week in this way, than by being whirled from place to place in our fiery chariots and four. True, we can go and return, and do what we have to do in much less time, but what have we seen? Simply here and there, and, like the Irishman, we almost feel provoked to think it was done so quickly, when he said "If he had knew he could come so quick he would have come *a fut.*"

Nearly twenty-five years ago we had occasion to start out for a trip through the country to try and if possible make a few sales, and collect some outstanding accounts.

We were engaged in the Nursery business in Springfield, Mass., at the time, and having had what we considered rather a poor Fall trade, and Spring that had been rather backward began to come on apace, and the rapidly swelling buds admonished us that whatever we expected to do must be done quickly or our Spring trade would be a failure.

So putting up a few trees and plants as samples, and taking a few changes of linen for ourselves, and a plenty of Catalogues for distribution on our journey, with plenty of oats for "Old Bill"—that was the horse—(we had an Uncle by the same name, but they were not at all related.) After breakfast we got under way and brought up about eleven o'clock A. M some fifteen miles East of the City, where we happened to meet an old customer who was very glad to see us, and kindly invited us to stop and dine with him which we were very glad to do. Our dinner consisted of boiled beef and pork, with such vegetables as are kept through the Winter, viz., cabbage, turnips, beets, potatoes, &c. We must have enjoyed it for we were exceedingly hungry—we only remember that the beef was exceedingly salt. Our dinner was embellished by six small children (not cooked), and the good woman, the mother, who might if she continued on long enough, walk up to Heaven on the heads of her children, so regular and stair-like they ascended. After dinner the worthy Sire gave me his history, which was that he was born there and had lived there ever since, and had been to Springfield a number of times, but never any further from home. We asked him if he had not some curiosity to see the outside world, and was told that once he did wish to go to Boston, but since he was married he had never had time. He lived where his father lived before him, but in a new house, and never did we witness a more perfect picture of contentment. When we were about to take our leave he filled a small sack with oats, and putting them in the seat of our vehicle bid us God speed.

Our next place of rest was at a small village some twelve miles further on, where we met an intelligent man to whom we sold by Catalogue and sample quite a bill of trees, which he said he needed very much, but he really had no time to go to town for them. We remained all night with him and were well entertained, learning the route of travel where we should be most likely to find customers, when he said many like himself would be glad to get the trees, but really the time and trouble going for them was so great that they did not have time. We found his advice good, and travelled the next day with good success, getting a good dinner, but our chances began to look slim for supper and lodging being twice denied. We hit upon a plan at last that was a perfect success. Seeing a man come out of a field into the road with a nice looking pair of cattle, we asked him if they were for sale? Well, he guessed he would sell them, but as cattle had been selling thereabout he thought we might think the price rather high, but he knew what they were and would not sell unless he got his price, which was really much more than we thought they were worth, but as we did not want them the price was no object. However, he said, it was getting dark, and if we had no place to stop for the night we could stay at his house and we could see them better in the morning.

We thanked him, accepting his offer, congratulating ourselves on the little ruse, for it was doubtless in the hope of making a good sale of the cattle that he offered the hospitalities. In the morning we looked at the cattle, which were full fed and looked somewhat improved from the night before, but we told him we were going on to Belchertown and would think it over, at the same time giving him one of our catalogues, with a gentle hint that his soil was adapted for the growth of certain kinds of fruit trees, which was a fact. He said he had tried some the year before but they did not do well; so we concluded to look at them and give some suggestions. We found them planted in a meadow, with tough sward close about what few roots they had, and certainly looking anything but thrifty. We volunteered to put out others in their places that should live and thrive, and he could pay one-half when they were put out and the remainder in the fall—to which he consented. From there we went to Belchertown where, it appeared to us, that every other building was a carriage factory and those between blacksmith shops. We made some excellent sales among the workmen, who had small gardens, to be paid for on delivery. At one shop alone we took ten orders. It was just dinner time, and when we got through we went to the hotel and had an excellent dinner ourselves, well satisfied with our morning's work. The afternoon was nearly as good and, remembering our dinner, we determined to try a supper at the same house, which we did, and had no cause to change our mind. The next day we started for Ware, stopping at a small village on the way that supported a doctor who, a man told us, would be likely to buy some trees or shrubbery of some kind. We hauled up to him and commenced our siege. He asked what we had; we told him. Then if we had so-and-so; yes; then did we have such an apple, and how did it thrive with us—all of which we answered with a glow of selling. So he questioned us until we were beginning to get out of patience, and at last we were told that he did not own a foot of land, but always took a great interest in fruit growing. We had found the wrong doctor, but the grounds of the other were supplied so we did not attack him.

When we reached Ware, which we did in the afternoon, we were invited to go to the house of a friend, an overseer on one of the mills. He was an old friend, and assisted us a great deal in disposing of trees and shrubbery; he even purchased some himself, though living in a rented house.—A friend asked him why he set out trees on another man's land when he was liable to be discharged at any time by his employers. He said he liked to see them grow; and we have often thought of his remark, and wonder who does not like to "see them grow."

From Ware we directed our course towards Enfield where we, without any unusual incident, arrived, and making a fair show, moved on towards Amherst, reaching there the day following, late in the afternoon. We remember to have passed many little school houses and small churches here and there, but we did not do a satisfactory business.

(Continued.)

LETTER ON INSURANCE.

Col. Warren, Editor of the Farmer:

Dear Sir—The absorbing interest with which our Agricultural Industries are now regarded by the general public, suggests that they are vitally connected with the general prosperity. The anxieties of the present season, regarding the Agricultural prospects of the coming year, are shared by our whole population; and the same concern would not be inappropriate in other subjects which affect the Farmer's individual welfare.

Every one is familiar with your disinterested efforts at all times, through your columns, to advise and assist Farmers to reap every advantage their position affords.

It has occurred to the writer that, among the many valuable suggestions which you have made for the Farmer's benefit, the one of Fire Insurance upon Farm dwellings and buildings, has not, perhaps, been made sufficiently important.

The object of this communication is, to ask—Whether, from your observation, which must be quite extended, our Farmers are generally prudent enough to insure their property against fire? A moment's reflection seems to show, conclusively, that where, in most cases, a Farmer's all is invested in his improvements and first year's crops, it would be gross negligence on his part to tempt financial ruin by failing to insure both.—This argument might not have equal force with Farmers of extended means, but prudence would also suggest to them an indemnity secured at such a trifling cost as present Fire Insurance.

Your remarks on this interesting topic I feel would be appreciated by a large class of your readers, who have failed heretofore to understand a subject of so much individual importance.

Yours, respectfully,

FARMER

We feel gratified to receive the above Letter upon the subject of *Insurance among our Farmers.* We had already written upon this subject before this Letter was received. Our remarks are in our Editorial on Festival Week.

We, however, feel that it is one of the greatest moment to our Farmers; a little annual expenditure and they are above calamity. We regret to know that *too many* of our farmers run the risk, and peril all. We hope this Letter from a Farmer will arouse them to the duty they owe to their families, and secure a Policy of Insurance before *it is too late.*

OLE BULL IN SAN FRANCISCO.

[*Editorial Column.*]

Those who enjoyed the rich feast of Music last week, on Friday evening, at Platt's Hall, at the first Concert of this justly-famed Violinist, since his return to California, will hail with delight the announcement made in our columns of his THREE CONCERTS, at *Platt's Hall*, during Festival Week, for these will add greatly to the general enjoyment of the thousands that will be in our City; and this opportunity, we know, will be gladly improved as far as the capacity of the Hall will admit.

We wish it were in our power to express in *words* the sense of pleasure enjoyed under the Music of this "Angel of the Violin." He bows his head to the Violin as it were to hold conference with it, and it seems almost to speak in silent response, for his countenance shines with joy in token of a recognition of power over it;—then his touch, and his closed eye is the signal for Music, such as the seraphs heard,—sounds

"As sweet and musical
As bright Apollo's lute, strung with hair."

Such Music is rare, and the present opportunity should not be lost, for in all probability it is the last time we on the Pacific Coast will ever enjoy his presence. He is on a goodly mission in behalf of his native land, and he labors to complete his work; of this we shall speak in our next.

The Concerts of Ole Bull are most happily arranged, the variety most excellent and complete and the Artists of his Company are of the highest merit.

Mr. Edward Hoffman, as a Pianist, merits and receives great applause.

Mr. Macdonald has a fine voice, and meets with most hearty approval from every audience.

Miss Safford must ever be a great favorite wherever her Queenlike form, rich voice, and truly beautiful smile shall greet an audience, her songs captivate and her smiles charm. We esteem this happy Musical Quartette a most wonderful band, and feel confident that every audience realize not only pleasure, but real lasting happiness, by such a feast as will be presented at Ole Bull's Concerts.

The Second Series of Concerts were given at Sacramento, in the Congregational Church; we were so fortunate as to enjoy them there. A crowded house, a delighted audience greeted with unbounded applause this Gifted Man. It was a glorious and successful Concert that will long be remembered. Sixteen years ago we heard him a Sacramento, and many present remembered him well.

CALIFORNIA FARMER IN THE OLD STATES.

As we are constantly receiving orders for our Journal from the Old States, for the purpose of learning about the Resources of California, we feel disposed to aid in this enterprise, and to this end we say to all our friends in the old States that we will receive from *them their own currency* in payment for the FARMER. We offer this as a *Premium* to our distant friends who send us their names as subscribers.

We also invite Californians who wish to send the FARMER to the Old States, to call and subscribe to our NEW VOLUME and thus furnish them with California Progress and Prosperity, for all subscribers in the Old States we will receive Greenbacks at PAR. This is done to advance the best interest of our State, giving to each subscriber the Agents commission as a Premium.

THE GLORIOUS RAINS.

This Journal it will be recollected has during the summer and autumn, always prophesied Rain, and that too in plenty, or rather in generous quantity.

We are now in receipt of Letters from all parts of the State, even down South, giving us the gratifying accounts of generous rains. And from our Counties in this vicinity we have assurance of the most promising crops ever known.

From Napa, Sonoma, Solano, Petaluma, etc., and from Sacramento region, as well as around the Bay, San Jose, Santa Clara, etc., there is every prospect of abundant crops and a general feeling of satisfaction and joy at the prospect before Farmers of these regions.

ALWAYS WELCOME!

Our Editorial Brethren on the Pacific Coast, and from any other part of the world, are always bid Welcome to our Editorial Rooms, to our Reading Room, Library and Museum. We shall always feel happy to receive a call from them, here they will find a large collection of Newspapers, Periodicals, and Valuable Publications from all parts of the world, together with an Agricultural and Mechanical Library and Books of reference, with valuable specimens in Agricultural Science, and Models of Implements. They will also find conveniences for writing their letters while in our city, and we shall always be happy to make their call pleasant and agreeable as well as useful to themselves. We repeat, they shall always be WELCOME.

Agriculture.

WHAT I KNOW OF FARMING.

BY HORACE GREELEY.

ESSAY NUMBER FIVE.

BUYING A FARM.

No one need be told at this day that good land is cheaper than poor—that the former may be bought more cheaply than it can be made. Yet this, like most truths, may be given undue emphasis. It should be considered in the light of the less obvious truth that *Every Farmer may make advantageous use of* SOME *poor land*. The smallest farm should have its strip or belt of forest; the larger should have an abundance and variety of trees; and sterile, stony land grows many if not most trees thrifty. Even at the risk of arousing Western prejudice, I maintain the New England, and all broken, hilly, rocky countries, have a decided advantage (abundantly counterbalanced, no doubt) over regions of great fertility and nearly uniform facility, in that human stupidity and mole-eyed greed can never wholly divest them of forests—that their sterile crags and steep acclivities must mainly be left to wood forever. Avarice may strip them of their covering of to day; but, defying the plow and the spade, they cannot be so denuded that they will not be speedily reclothed with trees and foliage.

I am not a believer that "Five Acres" or "Ten Acres" suffice for a farm. I know where money is made on even fewer than five acres: but they who do it are few, and men of exceptional capacity and diligence. Their achievements are necessarily confined to the vicinage of cities or manufacturing villages. The great majority of all who live by Agriculture want room to turn upon—want to grow grass and keep stock—and, for such, no mere garden or potato patch will answer. They want genuine farms.

Yet, go where you may in this country, you will hear a farmer saying of his neighbor. "He has too much land," even where the criticism might justly be reciprocated. We cannot all be mistaken on this head.

There are men who can each manage thousands of acres of tillage, just as there are those who can skillfully wield an army of a hundred thousand men. Napoleon said there were two of this class in the Europe of his day. There are others who cannot handle a hundred acres, so that nothing is lost through neglect or oversight. Rules must be adapted to average capacities and circumstances. He who expects to live by cattle rearing needs many more acres than he who is intent on grain growing; while he who contemplates vegetable, root, and fruit culture, needs fewer acres still.—As to the direction of his efforts, each will be a law unto himself.

If I were asked by a young man intent on farming to indicate the proper area for him, I would say, *Buy just so large a farm as half your means will pay for*. In other words, "If you are worth $20,000, invest half of it in land, the residue in stock, tools, etc., and observe the same rule of proportion, whether you be worth $1,000,000 or only $1,000. If you are worth just nothing at all, would invest in land the half of that, and no more. In other words, I would either wait to earn $500 or over, or push Westward till I found land that costs practically nothing."

This, then, I take to be the gist of the popular criticism on our farmers as having unduly enlarged their borders: They have more land than they have capital to stock and till to the best advantage. He who has but fifty acres has too much if he lets part of his land lie idle and unproductive for lack of team or hands to till it efficiently; while he who has a thousand acres has none too much if he has the means and talents wherewith to make the best of it all.

I have said that I consider the soil of New England as cheap, all things considered, for him who is able to buy and work it, as that of Minnesota or Arkansas—that I urge migration to the West only upon those who cannot pay for farms in the older States. I doubt whether the farmers of any other section have, in the average, done better, throughout the last two years, than the butter makers of Vermont, the cheese dairymen of this State.—And yet there is, in the ridgy, rocky, patch character of most of our Eastern farms, an insuperable barrier to the most economic, effective cultivation. If the ridges further apart—if each rocky or gravelly knoll were not in close proximity to a strip of bog or morass—it would be different. But the genius of our age points unmistakably to cultivation by steam or some other mechanical application of power; and this requires spacious fields, with few or no obstacles to the equable progress of the plow. I apprehend that, for this reason, the growth of bread-corn eastward o the Hudson can never more be considerably extended, so long as the boundless, fertile prairies can so easily pour their exhaustless supplies upon us. Fruits, Vegetables, Roots and Grass, we must continue to grow, probably in ever-increasing abundance; but we of the East will buy our bread-corn largely if not mainly from the West.

He, therefore, who buys land in the Eastern States should regard primarily its capacity to produce those crops in which the East can never be supplanted—Grass, Fruits, Vegetables, Timber—If a farm will also produce good Corn or Wheat, that is a recommendation; but let him place a higher value on those capacities which will be more generally required and drawn upon.

In the West, the case is different; for, though Wheat culture still recedes before the footsteps of advancing population, and Minnesota may soon cease to grow for others, as Western New York, Ohio, Indiana, and Northern Illinois, have already done, yet Indian Corn, being the basis of Beef and Pork, will long hold its own in the Valley of the Ohio and in that of Upper Mississippi. As it recedes slowly Westward, Clover and Timothy, Butter and Cheese, will press closely on its footsteps.

Good neighbors, good roads, good schools, good mechanics at hand, and a good church within reach, will always be valued and sought: few farmers are likely to disregard them. Let whoever buys a farm whereon to live resolve to buy once for all, and let him not forget that health is not only wealth but happiness—that an eligible location and a beautiful prospect are elements of enjoyment not only for ourselves but our friends; let him not fancy that all the land will soon be gobbled up and held at exorbitant prices, but believe that money will almost always command money's worth of whatever may be needed, so that he need not embarrass himself to-day through fear that he may not be able to find sellers to-morrow, and he can hardly fail to buy judiciously and thus escape that worst species of homesickness—sickness of home.

CULTIVATION OF OSAGE ORANGE HEDGE.

BY JAMES HANWAY.

[We give the annexed Letter entire, upon the Osage Orange, from the *Kansas Farmer*, so that those who desire to cultivate this valuable Hedge Plant may know the process of old cultivators.

It must be remembered that we have no *ice*, snow, or frozen ground to injure the plants, and therefore those portions of counsel do not apply; in all other ways the advice is excellent, and we are satisfied that this Hedge will be most admirable for California.

We would recommend, however, that it should be planted in *double rows*—plants one foot apart in each row, and the plants alternating in the row so as to break the space—thus making a *thick* hedge.—ED. F.]

EDITOR FARMER:—A subscriber of the *Farmer* requests me to give my opinion, through your paper, on the cultivation of the Osage Hedge, and asks if it is practicable to plant hedge on the open prairie, *unprotected by rail fence, &c.* He remarks that most of his neighbors inform him that the experiment will not pay—that cattle will destroy it, &c.

As the subject is one of interest and importance to the numerous settlers who have come to make Kansas a home, I willingly comply; although I know my friend might have found some one more able to instruct him.

The mode adopted by cultivators of the Osage Orange hedge is wonderfully diversified,—which proves that it may be successfully cultivated by different plans; but, as I have had some little experience, and taken some observations on the subject, I can give the writer my "opinion."

Plow a land ten or twelve feet wide, in the Fall; plow to the center, making a ridge; this keeps the water from settling in the hedge-row. In the Spring, give it another stirring; harrow it well; then roll it, as this will help the cause, and make it easier to put in the plants.

Next, put up your sight-stakes, and procure a line ten or more feet long—the longer the better. A steel dibble is the best instrument to put the plants in with, such as you find used by nurserymen; but a good and cheap substitute is a wooden one. Make it six or eight inches longer than a spade handle; round it at the point; and about twenty inches from the lower end put in a pin with a three-fourths-inch auger, as a stirrup to put your foot on to force it into the ground; then force it from you, and the hole is made.

Cut your plants an inch or so above the yellow, and be careful to press the dirt around the young plants. Many die, no doubt, from the careless manner and haste in which they are put in. This is an important item, and should not be disregarded.

The distance apart is six, eight or twelve inches. Everybody has a fancy of his own; but I think this question depends upon the care and cultivation to be bestowed on the hedge. Twelve inches is enough, if the hedge is plashed when it is two or three years old, and then kept trimmed; but I find that most farmers have something else to attend to about the time the plashing should be done, in early Spring; therefore, six inches, perhaps, is best, as a general rule. The value of a fence is the two or three feet nearest the ground; the top will extend itself without care.

I would prefer, as a general rule, to set a hedge about the time of early corn planting, although I have some that looks fine which was set out in June. Tend it as you would corn; keep all weeds from it; and in three or four years you will have a fence that will protect your crop from all outside intruders. In the Winter of 1867-8, a large amount of crops were lifted up by the frost, in other sections they were in no way injured—an evidence that the nature of the soil has considerable to do with it. To prevent this, plow in the Fall a heavy furrow to the plants; this protects them from Winter freezing.

Now for a word on the question: "Can Osage Orange hedge be grown on the open prairie?" Certainly it can. I have no doubt on that subject, for there are too many facts to corroborate the affirmative of that question. It has been satisfactorily tried in Johnson, Franklin and Anderson counties, and, I have, no doubt, in other places. Yes, sir, hundreds of acres of corn have been raised last year in fields protected from stock by an Osage hedge; and not a rail or a pound of nails used to protect the young from stock.

Last year I planted about four hundred rods of hedge on the open prairie, a part of it alongside of a public road which is considerably traveled (Lawrence and Fort Scott); and I can say that I never had a better stand. A few plants were displaced by cattle treading on them in wet weather; but even these, in most cases, did not die out. They were readily reset, and in Spring a few hours' work will supply what may be missing. Sixty acres of land enclosed with an Osage fence, which will not cost me forty dollars, including plants, putting them out, and tending for three years. This is certainly more profitable than destroying timber at an outlay of two hundred dollars for a temporary fence to protect the Osage fence. If any danger is apprehended it is the first year; for then the plants are tender, and need special attention; the second year they have taken strong root, and send forth vigorous shoots. The cattle become very sensitive how they trespass near them. In most cases the stock accustomed to graze on the ground, select a path; and it will be found that after your fence is three years old, the cattle have made a few gaps, by which they gain ingress and egress; when a few stakes will be necessary to close up, until the fence is old enough to turn stock.

I am fully aware that this project of fencing our vast prairies, will be pronounced visionary by some. Those who have been contending for a Stock Law, to prohibit cattle from roaming over the prairies, will, of course, not give it the consideration its importance deserves; for it undermines their superstructure. The owner of land contiguous to some large town or village, will not permit his vision to expand beyond a few miles from his own domicile; the hungry cattle will browse it off, and trample it in the ground.—Another will delay to plant out a hedge, because he is sceptical, and timid in breaking off from the good old way of his predecessors; and when the time comes that he no longer doubts the feasibility of the plan, then the stock of his neighbors has so multiplied, that he will again be in doubt; and then he will console himself that the time is past,—it is too late.

There are certain localities in which, perhaps, it would be injudicious to attempt this plan; but we must remember that the greater portion of our country is very thinly settled, and in most cases the new comer has but few cattle and a wide range of pasture.

What one man has accomplished, another may certainly attempt with reasonable hope of success. The cost of fencing is the most material item in a new farm. Those who have timber ask a good price for it, or will not sell at any price. In place of waiting for the Legislature to pass prohibitory laws against stock running at large, go to work in the Spring, break up a strip of ground at least a rod wide (to prevent prairie fires in the Fall); next year stir it and harrow it well; plant your hedge, and in three or four years you will have saved hundreds of dollars of unnecessary outlay, and beautified the country: Or, if you have a sub-soil plow, plant the same year.

LANE, Franklin Co., Kan., January, 1870.

DIRECTIONS FOR THE CULTIVATION OF CASTOR BEANS

Those who desire to cultivate the Castor Bean will find the following directions simple, plain and reliable. The Pacific Oil and Lead Works are sending out these directions widely, and we hope it will stimulate all to a careful cultivation of this valuable and profitable crop.

This company are now prepared to contract for all the Castor Beans raised in the State for the year 1870.

"Prepare the ground as for Corn, mark out the rows six feet apart, leaving an avenue eight feet wide every eight rows, for wagons to pass through while gathering. Plant about the last part of March, three seeds in each hill, six feet apart (each way,) but leave but one plant in a hill after they get from one to three inches high, taking care not to disturb the one to be left, when pulling up the two. Cultivate precisely the same as corn, keeping the ground clean of weeds. About five pounds of seed are required to the acre, and the average crop may be stated as from 1200 to 1600 lbs. As soon as the stalks are a foot high they will outgrow any weed. The land increases in fertility by the cultivation of this crop.

GATHERING THE CROP.

When the "spikes" are fit to pick, which can be known by the color changing from red to green go through the eight foot rows with the wagon, and have plenty of men with baskets, as they get too ripe very soon after the color changes and drop from the stalk to the ground and are lost. Make a piece of ground perfectly smooth like a brick yard, and spread the beans over it about two inches deep. They will pop out from the heat of the sun, and may be cleaned with a fanning mill.

EARLY ROSE POTATOE—GREAT PRODUCT.

There can be no question but that the EARLY ROSE POTATOE is the EARLIEST, MOST PRODUCTIVE, and BEST POTATOE IN THE WORLD.

The *American Agriculturist* gives the following Report of the

GREATEST YIELD ON RECORD.

Cornelius Simon, of Bloom, Ohio, writes to the *American Agriculturist* as follows: "I took just one pound of Early Rose, (four tubers), and cut them in pieces (about 50), one eye to each piece, and put them in a box to sprout about the first of May. Transplanted the sprouts (about 200) between the first of June and the fourth of July, in a rich sandy soil, in rows two feet apart, putting one sprout every foot in the rows, and produced, by actual weight, 751 pounds of good and large potatoes. The largest potatoe weighed two lbs. and seven ounces. From the best hill I got six lbs. four oz. From a piece of ground 10x18 feet, I dug 285 lbs.; at the rate of about 760 bushels per acre."

SEND US SAMPLES.

We desire to procure *Samples* of every variety of Grain, Grass, and every Cereal, as well as *Samples of New Products*, and for these we shall be ready to reciprocate in any way desired. We will pay for them, or bestow a full equivalent in some *new Seed or Plants* that may be desired.

Miscellaneous.

OIL CAKE MEAL!

THE BEST FEED KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal, and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent, Barley Meal, 13 per cent, Oat Meal, 18 per cent; Oil Cake Meal, 22.50 per cent. For life-sustaining properties to all stock are not to sudden changes of weather or over-driving! I see no equal

For MILCH COWS it is particularly valuable, increasing the quantity of milk and improving its quality to a far greater extent than any feed known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food; generally mixed with the mash of bran, slops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other food and no feed known will so quickly prepare animals for market as Oil Cake Meal

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($35 per ton,) it is the cheapest feed in market. It is now selling in New York at $42 per ton, gold, at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable food known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

TO THE PUBLIC!

THE

SAN FRANCISCO

PACKAGE EXPRESS

COMPANY.

CAPITAL.....$100,000

IS ORGANIZED FOR THE PURPOSE OF CONVEYING Passengers, Baggage, Packages, and Parcels to the different Railroad and Steamboat Lines, and to execute the same to any part of the City.

To our friends from the Country this system recommends itself for their consideration. They can give their checks, etc. to our Messengers on the Cars and boats, and feel perfectly sure that all will be safely and promptly delivered, thus saving any trouble with Express men or Job Wagons.

The Street Cars run from all Depots to the different Hotels.

Fruit or other Freight consigned to our care will be promptly delivered, and Freight Bills paid.

Mark Care of

"S. F. Package Express Company,"

Commissions for the purchase of goods in this City especially solicited, and articles forwarded as directed.

This Company commends itself to the General Public. The same system has been long in operation in Eastern Cities with great success.

Gardeners, Foremen, Etc.

Those who desire to secure good and reliable Gardeners, Orchardists, Vine-pruners, and Foremen upon Farms, can be supplied from our Office by making notice of such wants, and giving us the special duties they desire performed, the wages they will pay, and the particulars of board, washing, etc.

It will be our purpose to send out no persons who are not fully qualified for the specific duties desired, or any man who is not of good character, and shall not send out any man until, by a proper test, we know he is qualified in every respect.

Having long experience in this business and its knowledge of what is wanted, we shall only give employment to the *Best Men*.

For our time, examinations, correspondence, etc., we shall expect a compensation that will repay us

Horticulture.

FLOWER GARDENING.

PLANTS FOR SPECIAL PURPOSES.

In no way is the skill of the gardener or the taste of the amateur so fully shown as in the selection of seeds and plants best suited to the special purposes for which they are designed.—Much disappointment often results from injudicious selections, and very desirable flowers are often condemned as worthless, because they have been used in the wrong place. A good climber, for instance, would be a most beautiful object covering an arbor or fence, while in a bed in the garden or in the lawn, where the Phlox, or Petunia, or Verbena should have been planted, it would be simply worthless.

Some inadvertently place tall, free-growing plants in front of their flower beds, where they do more injury than good by hiding the beauty of their more modest neighbors. As the background of the bed, or as the center of the group, they would have filled their place admirably, but because they are out of their proper position they are condemned by those who used them so unfairly.

FLOWERS FOR A CONSTANT BRILLIANT SHOW.

The Aster, Antirrhinum, Balsam, Dianthus, Delphinium, Pansy, Petunia, Phlox Drummondii, Portulaca, Salpiglossis, Stock, Verbena, Double Zinnia, and other varieties that we have not space to name, should be in every collection.

FLOWERS FOR MASSES OF COLOR.

In modern gardening it is quite popular to grow entire beds of a particular color. The effect is very striking. White flowers are in great demand for cutting for weddings and for wreathing the pale yet still beautiful forms of the loved and lost. The following are some of the most desirable plants growing in masses. A few of the taller varieties are best for cutting:

White.—Sweet Alyssum, Candytuft, Clarkia, Sweet Pea, Phlox, Portulaca, Double White Rocket, Stock.

Blue.—Ageratum Mexicanum, Campanula, Eutoca, Gilia achilleæfolia, Larkspur, Myosotis, Nemophila insignis, Nigella, Veronica Syriaca, Whitlavia grandiflora; Delphinium formosum and Campanula Medium are splendid in color, but do not endure through the season.

Shades of Red.—Cacalia coccinea, Dianthus, Linum grandiflorum rubrum, Sweet Pea, Petunia, Phlox, Portulaca, Silene, Stock, Zinnia.

Yellow.—Bartonia aurea, Calliopsis, Eyrisimum, Eschscholtzia, Marigold, Oxyura chrysanthemoides, Portulaca, Sanvitalia, Dwarf Tropæolum.

FOR A TEMPORARY HEDGE.

There are some situations where a low hedge or screen is very useful and ornamental. I don't know of anything that will make a prettier hedge, supported by neat brush, than the Sweet Pea.—The Amaranthus makes a fine ornamental hedge; the foliage is dark, rich, and some varieties two or three colored; A. melancholicus ruber is the best. Delphinium cardiopetalum always pleased me for this purpose—about eighteen inches or two feet in height. The Double Zinnia makes a very good background or hedge. Almost any tall-growing plant may be useful for this purpose.

FLOWERS DESIRABLE FOR FRAGRANCE.

For fragrance, nothing equals the Mignonette, Sweet Alyssum, Sweet Pea, Erysimum, Stocks, Pinks, Picotees and Carnation.

NATURAL HISTORY.

We desire specimens in Natural History, Insects, Flies, Frogs, Toads, Snakes, Turtles, &c., preserved in spirits, or dried, and for these, or any curiosity, will make due return. Send by Wells, Fargo & Co. to our Office.

SMALL FRUIT INSTRUCTOR.

"What makes it valuable is because it contains so much practical, original matter in such a small space." John J. Thomas.

"The directions for growing Strawberries and Raspberries are the best I have ever seen."—Henry Ward Beecher

We could give hundreds of just such testimonials, showing the value of this little work. It should be in hands of every person, whether the owner of a rod square of ground or a hundred acres. Tree agents should have a copy. It contains 40 pages. Price 10 cents. Full price list, wholesale and retail, and also terms to agents for those desiring to get up a club for plants sent rans of all applicants. Parties at the south should order plants in the fall. Address PURDY & JOHNSTON, Palmyra, N. Y. or PURDY & HANCE, South Bend, Ind. 33-3m

SEEDS, PLANTS, ETC., BY MAIL.

The following are the rates by Law:

For all parcels of *four ounces*.....	2 cts
" " *eight ounces*.....	6 "
" *one pound parcels*	8 "
" *four pound* "	32 "

No parcels to be above *four pounds*.

All parcels should be carefully done up and sealed.

It certainly is to be hoped that all persons who thus send *perishable* matter will enclose in oilcloth all parcels that are likely to cause dampness, and *never abuse* Government liberality by making the *Mail bags* like the *Steamer* or *Railway cars* the medium of *all* their business.

A MONTHLY PAPER AND COTTAGE GARDENER, SMALL FRUIT RECORDER

AT ONLY
50 CENTS PER YEAR.

Devoted solely to small Fruits, and Vegetable and Home's Adornment. The Editor has had a lifetime of PRACTICAL experience, and now has 2 0 acres into SMALL FRUITS. He takes or exchanges for every agricultural and horticultural paper printed in the United States and Canada, and extracts from such, all PRACTICAL matter pertaining to these interesting subjects, that readers of this paper get the CREAM of all these publications. A practical story entitled "EXPECTATIONS REALIZED." will begin in the January number, telling how a person first grew fruits for his family use, and then supplied his village market, and finally worked into a very extensive and profitable business; also the Editor's "*Rambles and Jottings over the Fruit-Farm.*" Besides correspondence from all parts of the United States and Canada from practical fruit growers and flower fanciers.

Splendid inducements offered to those getting up clubs, for particulars send stamp for our beautiful and attractive show bill and "Club Circular." Sample copies of Recorder sent with show bill. Address A. M. PURDY, Palmyra, N. Y.

The show bill is exceedingly beautiful and well worth examination.

BOUND VOLUMES FARMER

☞ Volumes of the "California Farmer" for The last EIGHT YEARS, uniformly bound, can be had at the Farmer Office at $8 per Volume.

These Eight Volumes contain more useful matter touching the practical workings of Agriculture as adapted to California Culture than any Book or Books Extant, as they comprise hundreds of Experiments, Letters and Essays upon the Culture of Cotton, Rice, Coffee and Tobacco; Grapes, Strawberries, and all other Fruits, with the Culture of Hops, Castor Beans, Flax, Hemp, &c. and the Whole series of Essays of L. Prevost on Silk Culture, from early beginning.

This set of Volumes would be a Library of itself and invaluable to the Cultivator of the Soil.

Orders sent to Farmer Office will be promptly attended to

VALUABLE PLANTS FOR SALE.

☞ Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and to so cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, to gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us. WARREN & CO.,

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING .....FEB. 17, 1870.

THE CALIFORNIA FARMER READING ROOM, AND MUSEUM OF NATURAL HISTORY.

220 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING:

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion; twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SAMPLE COPIES.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination hoping our paper will meet their approval and induce them to subscribe, and to ask their neighbors to subscribe also.

Send for Sample Papers and get up a club. Address

PUBLISHER CALIFORNIA FARMER,
San Francisco, Cal.

Editor's Chair,

[Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in each issue to our *Journal*, to which we would direct their *special* attention.]

THIS NUMBER OF THE FARMER.

We ask special attention of our Readers to the following articles.

Farmers, be sure to read *Horace Greely's* letter about Farming—you are a great looser if you do not read every letter he shall write.

Read about the *Mulberry Tree, Osage Orange Hedge, Castor Bean*, all about the "*Early Rose Potatoe*," its wonderful productiveness, etc., etc.,

Flower Gardening. We give a sketch of this work from "Vicks" system of Gardening, and his opinion, and selections of Flowers.

Our Home Letter, from the *Womans' Journal* must be read.

GOING ROUND IN A WAGGON.

The letter of "Philmore," will interest our Nurserymen, for it is a picture of their own life, i. e., of a New England Nurserymans life in business, we know it to be true, for our early years in the same trade has been lived over again by the letter.

Let us hear often from "Philmore."

Minerva Glen.—Our very agreeable correspondent "A. K." has thrown down the glove to "Jenny Dare," and we *Dare* say an answer will come. "A. K's." letters are always acceptable.

MEMORIALS OF OLE BULL.

We promise in our next two Numbers some very interesting sketches of this Heaven-born genius, which will, we know, be very gratifying to our readers.

Ole Bull is most fortunate in having so happy a Company,—the aid of his Son, as Manager, whose gentlemanly courtesy wins friends, and his able Agent, Mr. Watson, whose talent as an Agent as well as skill as an Artist, gather him friends wherever he is known.

TO OUR SUBSCRIBERS.

We hope those of our subscribers who visit the City during the Festival (and all should come that can) will not fail to call at our office and confer with us, we shall have some choice Seed, Plants, or token for each and for all. They can at the same time bring us "Reports of Crops," etc., etc., and which will well repay us for what we can do.

Acknowledgements

Articles Received at the California Farmer Exhibition Rooms, No. 320 Clay Street.

We are indebted the Agricultural Department at Washington for the Valuable Reports of 1868, a Bound Volume, an improvement on all former years.

We return thanks to the Sergeant at Arms of the Senate, and also to the Sergeant at Arms of the Assembly for all the Reports of the several Official Departments of the State.

THE BEE JOURNAL

Comes to us with all the needed details for Bee Keeping. Published by N. C. Mitchell, Esq., Indianapolis, Indiana.

OLE BULL AT SAN JOSE.

The City of San Jose is to enjoy the presence of this wonderful genius, his Instrument will speak and his smile will gladden many hearts and those that enjoy them will remember them forever.—Let no citizen of San Jose fail to improve this opportunity.

A LUXURIOUS BATH.

Strangers to our City, and all persons should not fail to visit and enjoy the famous Turkish and Roman Baths of Dr. Zelle, on Pacific Street, that is one of the luxuries that should be enjoyed during Festival week.

RAMBLES IN THE COUNTRY.

THE RAINS HAVE COME.

The earth puts on her richest robes to-day,
For in the folds of her green vestment lay
Ten thousand bright and lovely fragrant flowers,
Their beauteous buds, wide-scattered o'er the plain,
Have waited trustingly for the welcome RAIN,—
And now they blossom in these gentle showers.

Nothing could be more lovely than the bright green earth, mirrored to the eye through the falling rain that has been so earnestly prayed for—so earnestly hoped for, and now so welcome to the many waiting hearts.

We took the cars of the Western Pacific Railroad for Sacramento, which is now by far the *very best of all routes* from San Francisco to the Capitol. The cars are much better and easier, while the luxury of a breakfast or dinner in the Palace Car eating room is a comfort to be obtained on no other Railroad or route to the Capital.

This eating arrangement is a most capital arrangement for the traveller, as he can enjoy a luxurious meal, with every comfort needed, while rapidly moving on his journey.

Never have we seen the crops look finer than from Alameda to Stockton, through that rich grain region, except where we noted the miserable system of *scratching* in the grain—plowing two or four inches, or only harrowing over the stubble—this and *late planting* is the cause of short crops, grain drying up, and shrivelled grain. It is this shiftless way of farming that gives rise to so many complaints of loss of crops. The crops that were put in on fallowed lands all look well and give great promise.

We feel confident that our Farmers will soon learn that in this State the "Summer Fallow" is the only system that can be safely relied on for a good crop.

Along the entire route, from Alameda to Stockton, through the Livermore Valley, there is a rapidly increasing improvement steadily going on. Buildings going up, lands improved, crops put in—all indications of coming prosperity to this fertile region.

One thing is much wanted now,—a well-planned system of tree planting. Those who now build their neat little houses should, by all means, be sure to surround them with the choicest of trees and vines. A few stately trees in front and around a dwelling will always increase the value of such property more than four times the cost of all such improvements, in case there is any desire to sell.

The rains were falling freely as we passed along this route. In many portions of it the grain was up from three to six inches, and looked as promising as could be desired; and if the same improvements continue, we shall soon have quite a populous settlement along the entire route of the Western Pacific Railroad, which is one of the best in the State.

OUR LEGISLATURE.

Our political journals of both parties will always have more or less to find fault with in the action of the opposite party, but from our standpoint we see enough to convince us that, while there may be more or less "log-rolling," there will be a considerable good business done.

We visited the Capitol. We saw the "American Flag" of California manufacture waving over the heads of our legislators, and we hope it will teach them—above all things else—to labor for the "Greatest good of the greatest number of people,"—that, is good legislation. Whatever croakers may say, we think we shall have some good legislation this session.

The "Capitol" of California is a Building of which all our people may be justly proud, and when completed, and the grounds around it properly laid out, will be one of the most complete Capitol Buildings and Grounds in the Union.

THE MUSICAL SEASON.

The approach to the Great Musical Festival, which is to take place, next week, at the Pavilion, for the benefit of the Mercantile Library, has drawn to our City not only many of our best artists already, but soon there will congregate the best talent from every portion of the Pacific Coast, not only those who, as artistes, will engage in this Grand Festival, but all the lovers of music, who will be present to experience one of the richest intellectual enjoyments ever offered in California.

We are now having, as a prelude to the coming Festival, a series of Musical Concerts by Eminent Artists, all over the State. The return to California of "Ole Bull" has created a still greater *furore* for music. His recent advent at "Platt's Hall," by two Concerts—clearly manifested the feeling that is now prevalent by giving him two very crowded audiences, truly intellectual,—his reception being of the most enthusiastic character—a most Glorious Welcome!

"Ole Bull" is one of the most remarkable men of the age. Ripe in years, yet full of life and vigor, and with a soul ever attentive to Melody—his countenance beaming with the Spring-time of Youth, while his active movements and genial smile tell that he is full of strength, and vigor, and power.

WELLS, FARGO AND CO'S EXPRESS.

This old and long established Company are now doing a wonderful business. The amount must be MILLIONS monthly—aye, MILLIONS WEEKLY!—Their present place of business is altogether too small, and they must soon remove to a more commodious building. Why would it not be a good move for Wells, Fargo and Co. to make a contract with the Government and take the "CUSTOM HOUSE BLOCK?" that would be a central position. Lease the lot for 20 years, and build just such a building as would suit their business. It would be a capital place for the Public, and capital for the Company, and we think our Government would like the plan first rate.

What say you, Messrs. Wells, Fargo and Co., to this plan of ours?

We only *suggest*, as the *Alta* says.

MUSICAL HOLIDAY WEEK.

PLACES FOR VISITORS TO CALL.

With the belief that many thousands of visitors will come to San Francisco the coming week, the time set apart for the Grand Musical Festival at the Pavilion, and as our Citizens have Resolved that the URSO CONCERT shall save the MERCANTILE LIBRARY, we think as we place before them the Programme of this Grand Musical Festival, our friends from the Country will come with a rush.

Therefore, we wish to call their attention to some of the most important places that should be visited in a *Business* way, by Citizens from the Country, so that they can combine business with pleasure, or do their business in a pleasurable way.

AGRICULTURAL STORES.

First, our Farmers should use the first part of the day in visiting our Agricultural Stores, Seed Stores, Gardens and Nurseries around our City, and thus learn of New Implements, New Seeds, etc., and, by all means, not to forget and call at the

"CALIFORNIA FARMER" OFFICE,

Where we have much to show them, and where we promise to give them a Kindly Welcome.

FARMERS' WAGONS, HARNESS, ETC.

For these goods, read our columns. We never advertise any but the Best Houses,—those that are reliable, and such as will please all that care.

PURCHASERS OF FAMILY STORES,

By all means visit the Large and Extensive Grocery Establishment of Bowen & Brothers, on Pine Street,—the most complete on the Pacific Coast, and where our Farmers can select their supplies of Family Groceries on the very best terms.

PURCHASERS OF DRY GOODS.

As our City will be graced by a glorious host of the "Best part of Creation," we think we do the Wives, Mothers and Daughters of our State a good service if we remind them that the very largest and most complete Shawl, Silk and Fashionable Dry Goods Warehouse is that of Messrs. Kerby, Byrne and Co., in Lick House Block, Montgomery Street. Mr. Byrne has just returned from Europe and the East, with an Immense Stock of New Goods, and this House is prepared to offer their goods, during the coming week, at really tempting prices, and to this House we can refer them with confidence.

FURNISHING YOUR HOUSES.

For all kinds of *Furniture*, we point the reader to the Extensive Warehouses of N. P. Cole and Co., as a place where all that is desirable in the Furniture line can be found; we also call attention to the House of Geo. O. Whitny and Co., who also have a most Extensive Warehouse of Rich Furniture, Upholstery, Curtains, Carpets, etc.; these two Houses are esteemed the best in our City, and there all patrons will be pleased and satisfied.

OUR WINE HOUSES.

Our Vineyardists coming to our City should, by all means, call at the Warehouses of those Popular Wine Dealers whose names are in our columns. The Lake Vineyard Wine Company—Landsberger and Co.,—Grozinger,—these are the leading houses, and here the Vine Grower can learn much to his own interest.

THE ANATOMICAL MUSEUM

Here is a place that Fathers and Sons should visit, and learn of the "House they live in." We esteem this Museum a great public benefit, and no young man can visit it without being warned of violating his highest nature.

INSURE YOUR HOMESTEADS.

Our citizens from the Country coming in now should take this opportunity to *Insure their property* of all kinds. The Farmer, his Home and Furniture, his Barns, and Warehouses, and Implements. The Manufacturer—his Buildings and Stock. The Mechanic—his Workshop and Tools. No person should go to sleep under a risk that a spark may *Ruin* him before morning. A little thought and a little expenditure will give security against such a calamity, and if the insured wishes a Safe Policy, the Pacific Insurance Company's will furnish such one beyond all doubt or question.

INTELLECTUAL AND SOCIAL IMPROVEMENT.

For Books which may be wanted, remember the Book Stores of Messrs. A. Roman and Co., and H. H. Bancroft and Co. Visit also the Picture Gallery of Snow and Rose, Brothers Nahl, Currier and Winter; and for your Photographs and *Cartes de Visite*, by all means go to Wm. Shew's Gallery, as there you will get a picture in reality, one that is natural.

THE MUSICAL FEAST.

All minor duties done, visitors to our City will then be prepared to enjoy the afternoons of the day in the rich and varied Music of the Great Concert, such as they never heard before nor may ever hear again; and on the Evenings of *Wednesday Thursday*, and *Friday*, Ole Bull, the Great *Maestro*, will discourse Music at Platt's Hall, such Music as no other man ever did, or ever can produce, and our friends from the Country as well as from the City, must come and be prepared for a joyous and happy time, for we are pleased to know that our *Merchants, Bankers*, and *Workshops* all suspend business,—our Courts stop litigation, and all join in acts of Hospitality and Courtesy, and resolve for a happy week—beginning with

"WASHINGTON'S BIRTHDAY,"

The day most appropriate for so Grand an Enterprise—a day that will be *ushered in* by the Roar of Cannon, the Ringing of Bells,—and will close with Bonfires and Illuminations: a day, too—

When upward to the deep blue sky
Our bright-starred Banner, waving high,
Proclaims the worth of Libery!
The Stars and Stripes—long may they wave,
Till all the Mighty and the Brave
Proclaim beneath its folds—They're Free!

AID THE LIBRARY.

In order to give our mite, we give the Programme of the Great Festival, and crowd our columns to do so.

REPUDIATE REPUDIATION.

Our Country has been greatly injured *Abroad* and at *Home* by reason of the tattle about *Repudiation*—a deed that every honorable mind repels with scorn.

The present stagnation in trade has been made worse by the talk about *Repudiation*. Let the word now go forth among all honorable men that they *Repudiate* Repudiation, and public and private credit would rise at Home and Abroad.

Let those who desire that the United States should enjoy a deserved credit Abroad read the following, from the *London Times* of January 3 upon AMERICAN REPUDIATION:

"It is quite certain that if, as one speaker affirmed, the Americans have not only the means of paying their debt, but the ability and disposition to do so without contention or abatement, they might save themselves a considerable proportion of its annual charge. That their resources are abundant is clear from their own financial statements, and that the will is no more wanting than the way, ought to be equally plain after this debate. But besides the old stories of repudiation which Mr. Woodward, of Pennsylvania, bluntly recalled to the memory of the House, the incessant agitation of this topic among American politicians has produced a mischievous effect. Contemptuously as the Americans themselves rejected Andrew Johnson's proposals, it was impossible that European readers should receive without emotion recommendations from no less a personage than the President of the Union. The result is visible in the quotations of the money market to this very day. Though American securities have risen considerable in public favor, they are still not valued at one-half the worth of our own. The American six-per-cents. are at 86, while the British threes are at at 92. Twice the amount of interest does not suffice to put the bonds of the Union on a level with our own stocks. This enormous difference expresses simply the difference of public confidence in the two Governments.—That the Americans can afford to pay their debts, at least as well as we can, is unquestionable; that they will actually pay them as surely as we shall do, has hitherto been so far doubted that the interest has had to be doubled before the security could be rendered acceptable. Gradually, after such resolutions as we have now recorded, we may expect these conditions to be changed; but it was a sad blunder, as must now be evident, to allow such impressions to be publicly received.

Thus it will be seen that our public credit has been seriously injured abroad by the talk of Repudiation in Congress. The only way for us now is bravely and courageously to Publicly REPUDIATE Repudition.

THE LAEMLIN CONCERT AT SACRAMENTO.

These distinguished Pianistes gave their Concert Complimentary in response to the invitation of Gov. Haight and members of the Legislature at Sacramento, on the 15th as announced in our last. It was most successful; the Congregational Church was filled with a large and most fashionable audience, and such was the pleasure manifested that almost every piece was loudly encored.

These Artists never appeared better, nor performed with so much skill, ability and grace—completely astonishing even their friends by their performances.

Madam Andreas sang with great power and skill her full rich voice won many token of applause and demanded several encores. Mr. Derby's songs were received with merited applause, and were encored.

The performance of Prof. Dorrego on the Guitar was truly admirable, wining great favor and warmly encored.

The Solos upon the Organ were superior performances and won great applause.

This Concert was complete, and most highly honorable to these gifted and highly deserving young Ladies.

THE EARTHQUAKE.

Another Electric Shock for the timid among our population. This is the *second series*; when we shall have a third is a question of time. The Mighty Hand that holds the "Safety Valve" of our Mother Earth, knows when and how to "let the steem off."

The *Tremors*, we believe, are but the result of some serious convulsions at the Islands of the Sea or elsewhere, and we only feel its *dying* power.—No danger has been done of any note, although many of the neighboring Counties felt the shock.

SAN FRANCISCO PACKAGE EXPRESS CO.

This Company is now located at 313 Montgomery street, in the very centre of our business thoroughfares, and are ready and prompt in the delivery of Trunks, Packages, Parcels, etc., on all the routes of Steamer, Railroad, etc., and prices very moderate.

This Company will procure rooms for all parties coming to the Grand "Urso" Concert. Persons, by writing to the San Francisco Express Co., can have rooms engaged in advance;—no charge for this duty.

UNFIT THEATRICALS.

We see by our Exchanges that the "Can-Can" has been suppressed by the authorities of Cincinnati. It would be well if this should be done in every city, and many more exhibitions of the same sort.

There are now many performances in our City of a character unfit for any person to witness that has any regard for the reputation of the young, and it is the of those who *plan* make such shows to corrupt the *young minds* and thus raise up a class of people that will give them a support hereafter.

According to a detailed statement in the *Boston Transcript*, there have been forty stone buildings erected during the year in Boston, at an aggregate cost of $2,321,000; of brick buildings there have been 529, costing $7,667,300; and of wooden structures, 742, costing $2,568,100. Total number of buildings, 1311, costing $11,950,400.

OLE BULL

RESPECTFULLY ANNOUNCES A SERIES OF THREE

Grand Concerts!

D. E. CALLAHAN,
33-1 PROPRIETOR

Miscellaneous.

NEW

AGRICULTURAL BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz.: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS inthose parts needing such illustration; so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

THE FIELD AND GARDEN VEGETABLES OF AMERICA By Fearing Burr. Containing descriptions of all Vegetables, their different species and varieties grown in this country, with full illustrations of them.....Price $5 00

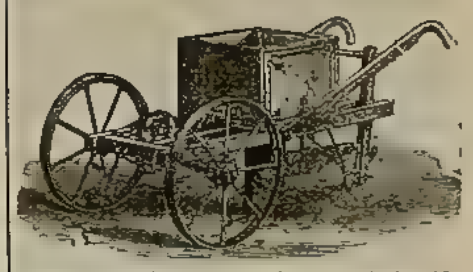
TRUE'S IMPROVED POTATO PLANTER.



This is, undoubtedly, one of the most valuable Machines adapted to Agricultural purposes ever introduced.

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such sized slices as the farmer may prefer; drops those pieces with the most perfect regularity, and covers them perfectly, and does all this as fast as a horse can walk over any ground that can be plowed

No intelligent farmer can fail to see that an implement with which one man can, with the aid of a horse plant six acres of potatoes in a day, is of inestimable value; because the days in which PLANTING can properly be done are very few, while he has all SUMMER and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attending to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor-Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune with it.

Particulars and Catalogues can be had at our office.

WARREN & CO.,
320 Clay street, up stairs.

A Bargain!

A Fine Ho es ad on the Mountains!!

A very fine COTTAGE HOME, in Eldorado County, containing Twenty Acres of Choice Land, pleasantly situated, and with pleasant surroundings.

A handsome Cottage House of Five Rooms on the first floor, and Two above, with every convenient arrangement for Family Comfort—Closets, Bath room, Cellar under house, etc.

The outbuildings are, a good Carriage House, Wood shed, Chicken House, etc.

A Vineyard of Five Acres, Six and Eight
from which 1,500 Gallons of Wine have been
Year.

A good Orchard of 320 Trees, Five to Seven Years Old, all Good Varieties of Fruit. The Fifteen Acres' balance of Land is best for Orchard, Vineyard, or Garden Cultivation.

There is any quantity of "Uncle Sam's" land, of Best Quality, that can be had at Settler's Prices.

The House is nicely furnished, and, to a person of taste, this place can be made a "little Paradise"

The House and Grounds will be sold a GREAT BARGAIN, if applied for immediately, and will be sold for Less than the Cost of the Buildings!

Agents Wanted.

We want good Agents for every County in the State to canvass for this Journal.

We wish to employ good, smart, capable, intelligent men—those who have common sense views upon the VALUE OF OUR AGRICULTURAL INTERESTS.

To persons of general information, and of active habits and courteous manners, a very liberal salary can be earned.

None need apply who cannot bring undoubted references. Apply to

EDITOR FARMER.

Home Miscellany.

BY AND BY.

BY L. D. NICHOLS.

Often little childish hearts,
When for fancied good they sigh,
Meet the hope deferring words—
"By and by, dear; by and by."

"When will Johnny be a man
Like papa, so tall and high?
When can he sit up at night?"
"By and by, dear; by and by."

"When will winter go away?
When will come 'Fourth o' July?'
When can Nell long dresses wear?"
"By and by, dear; by and by."

"By and by" the country seems
Where all glories waiting lie;
And when disappointments come,
Tears are dried with "By and by."

Each bright hope the young heart forms,
Longings fond, ambitions high,
Wait beneath the rainbow arch
Of the land of "By and by."

Older grown, 'tis yet the same;
Though the rainbows farther fly,
Mocking oft our eager chase,
We press on to "By and by."

Honors there, and true love crowned,
Gold, and all that gold can buy;
Present toil, sick "hope deferred,"
We can bear till "By and by."

Years roll on—some fair, some sad—
Age and death are drawing nigh;
Look we upward—onward still
To the rest of "By and By."

LAST HOURS OF GEO. D. PRENTICE.

The Louisville *Courier-Journal*, January 23d, has the following on the last hours of the great Journalist:

Who can read these beautiful thoughts that emanated from the heart of the gifted Prentice, and not feel a reverence for him—a reverence, too, so strong that it makes us forget everything about him but the good and great qualities in his character.

When Dr. Benton reached Mr. Prentice's bedside, evening before last, he found that his patient was rapidly sinking. He was yet conscious, and remained so up to the moment of his death. One of Mr. Prentice's earliest literary productions was a story called, we believe, "The Maniac of the Lake," an extract from which has been making the rounds of the press for the last 30 years. A few days ago Mrs. Dr. Benton, who took a spiritual welfare in Mr. Prentice, clipped the extract from a newspaper, and requested her husband to ask Mr. Prentice to read it. The following is the extract:

"It cannot be that this earth is man's only abiding place. It cannot be that our life is a bubble cast up by eternity to float a moment upon its waves, and sink in nothingness. Else why is it the high and glorious aspirations which leap like angels from the temple of our hearts are forever wandering unsatisfied? Why is it that the rainbow and the clouds come over us with a beauty that is not of earth, and then pass off and leave us to muse on their loveliness? Why is it that the stars which hold their festival around the midnight throne are set above the grasp of our limited faculties, forever mocking us with their unapproachable glory? And, finally why is it that bright forms of human beauty, are presented to our views and taken from us, leaving a thousand streams of our affections to flow back in an Alpine torrent upon our hearts? We are born for a higher destiny than that of earth. There is a realm where the rainbow never fades; where the stars are spread out before us like islands that slumber on the ocean, and where the beautiful beings which pass before us like shadows will stay forever in our presence."

During the night the Doctor asked Mr. Prentice if he would read the extract. He said that he was no longer able to read. "Shall I read it for you?" asked the Doctor. "Yes, yes," was the reply.—The beautiful words were read, but their dying author was too near the other world to appreciate fully their significance. He muttered a few sentences with his failing eyes turned heavenward, but the sounds were too indistinct to be intelligible. In the mean time two of Mr. Prentice's best and beloved friends, Mr. and Mrs. G. W. Griffin, had reached his bedside. To Mrs. Griffin, the poetess of this city, the last poem he ever wrote was addressed. She was much devoted to him, and he never spoke of her but in the most affectionate terms, always calling her "Alice." She approached, and, leaning over his pillow a short time before he breathed his last, asked him, "Do you know me?" "Yes," he replied, "it is Josephine." "No," said Mrs. Griffin, "it is Alice." "Yes, yes, I know you now," said he, after which he spoke a few intelligible words. For the last hour he made no effort to converse with those around him. To the questions that were addressed to him he merely answered yes or no. His last intelligible words, uttered some two hours before his death, were, "I would like to know—"

Who can finish *that* sentence of this gifted man—He knows all now—to him the veil is lifted, and beyond a doubt he is now "with those beautiful beings that will stay in his presence forever."

OUR CALIFORNIA LETTER.

DEAR JOURNAL:—If you walk along Montgomery street in San Francisco, on sunny afternoons, the swarms of human butterflies gaily disporting themselves will impart the same joy of the new winter season, which comes with the springing grass and returning birds. That is, if you are philosophic enough to look at the fruit we call Humanity, as the true microcosm in which all lower orders of beings are represented, the butterflies as well as the bees. Sometimes, I turn out of my way and follow one of these gay, airy creatures, as it flits along the *pave*, or poises on its delicate heels before a jeweller's window, without any human interest in it, or moral anxiety on its account. Any one will understand how easily persons may become mere objects, who has felt the solitude of great cities, the unfellowship of numbers where no common purpose unites them.

In just this mood, I was drifted along the street to day, in a gay *parterre* of well dressed women, the genial sunshine reflected from many a beautiful face, from costly velvets, and marvellous fabrics of satin and lace. San Francisco in her best clothes is a sight to see, and I pleased myself with the women in purple, and women in green, with plush and velvet overdresses, with costly furs, with dainty hats and dashing tartans. I marked the handful of "conservative" women known by a certain length and amplitude of skirt, and the more numerous "radicals," close reefed, with every loop, cord, and button in place. Many I marked as belonging to the dangerous classes of society, to men with small incomes, and one black and gold creature, faultless in attire, as Eugenie herself, held my eyes by a strange facination.—Was it Hood's

"Fair Inez?

She has gone into the west,
To dazzle when the sun goes down,
And rob the world of rest!"

Why do I think of beetles and fire-flies as with easy grace she moves along the street? "Beautiful after its kind," I said to myself, as I turned out of Montgomery into Jackson, one of the avenues which led to the Chinese quarter. I like to see the yellow women enjoying the sunshine; and despite all you may read, very respectable Chinese women take the air with their nurses and children. It is only those of high caste who obey Paul's injunctions to the letter. To-day no embroidered satin tunics and fan-shaped structures of hair were to be seen, though there was an unusual stir and bustle in the neighborhood. The scum of the population was out of doors, and women, not of the checked-handkercief order—the badge of prostution—were numerous. Little squads of them, their shining black hair gathered in a smooth knot behind, their stockings spotless, tunics and trowsers freshly ironed, were eagerly conversing and looking down the street. Then I remembered that one of the Pacific Mail-Steamers was in, and, as I walked on, the crowd and noise and excitement increased.

Near Dupont street I was fairly stopped, and there was no retracing my steps, for crowds of Chinamen were following me. So I stepped aside into an alley, and watched the cars discharge their freight of two hundred and forty poor Canton women—children, we should call them—destined to supply the dens of infamy. They had been landed from the Chinese steamer, on Sunday, like a drove of sheep or cows, in squads. The policemen and Chinese "bosses" kept each squad together, and drove the entire crowd into a corner under the shed, and there they stood, watched as closely as ever was guarded a gang of slaves in the South. If any resident Chinawoman approached too near the prizes, she was seized and pushed away, and if any of the new comers left the crowd, she was driven back, or seized by the back of the neck and shoved to her place again.

Then the poor women had been conducted to an office, in which a white woman is stationed, whose business is to search them for opium. It is seldom any opium is found in the possession of these poor wretches. Most of those who come are young girls, many of them not over twelve or thirteen years of age; and nine-tenths, at least, are for purposes of prostitution.

This business of importing Chines women has been reduced to a system. Seven or eight cars (extras) of the Omnibus line were reserved for the transportation of the women to the Chinese quarters. Into these the creatures were driven by squads, under the guardianship of policemen, and hauled to a point on Jackson street above Dupont and it was from these cars that I witnessed their debarkation. No lack of human interest in *this* spectacle; these are not "specimens," though as they were driven along towards the theatre where they are to be assorted and delivered to their owners, they received exactly as much consideration as would so many beasts. The strangers were driven up some rickety old steps leading to the Dupont street theatre, and into the pit of that wretched place they were again herded. There was something horrible in the faces of the opium-chewers, in the hooting and gibbering of the crowd,—an awful demoniac mockery of Christianity and civilization. In those few moments, when I stood watching those innocent children of shame I felt myself a part of their degradation. The burdens they did not feel and the woes they did not know seemed to be laid upon me. And just below us, flowed that beautiful stream of elegance and refinement! Here, an ignorance so deep that no ray of moral consciousness has ever penetrated it; there, an insensibility that makes such a scene possible in the world.

Sorely humbled and heartsick I made my way through the crowd, and was led (by the Spirit, perhaps,) up the steep ascent of Telegraph Hill.—On the very top the eye has a wide range of vision from the mountains to the sea. The scene I had witnessed had helped me to inhabit the past of all my race, the ages when woman, everywhere, was as I had seen her to-day, merely the prey of man. I repeated with a new sense of their meaning, the words of a prayer I had used in some of the dark places of the world: "I thank thee, Oh God, that I belong also to the victims of sin, and ignor [illegible]. That the sorrow of their vast woes and awful dangers is added to enlarge and deepen my life, that I also must bear the cross of the world's woe and ruin, that my fellowship with Thee may become more pefect through compassionate sympathy and offices of redeeming love."

Standing in the centre of a chain of womanhood, one end of which is in the heavens, with one men worship as the mother of God, and the other in the "hells" where these Canton slaves wait for their redemption, the problem which you dear JOURNAL, are trying to solve, "How may the power of enlightened womanhood be organized into efficient activity?" never seemed of such vast importance, and I never so realized the immensity of the work to be done. What will the right of suffrage be worth to you, or me, when the Asiatic wave of which these ripples are the warning, has fairly broken upon our shores? What would it not be worth if with one accord the women of America were prepared to exercise it in generous hospitality to all strangers, in wise economies of all new elements of national strength, and in self-denying efforts to elevate and purify the domestic and social life of the country? And how shall they be prepared if the hope and expectation of such responsibility is not kept before them?

For myself, I tremble lest the ages of subjection should dwarf and cripple the freedwoman, so that she will do her work feebly when the right to share in all noble work is achieved. That the women who lead and the woman who are led in this reform, each in her own place, may be able to verify her own credentials, is my strong desire.

I have never seen any place where a woman's right to work is so unquestioned as in California, and there is no place on the planet where her best work is so needed. If I could unfold page after page of the life of one noble and devoted woman whom to know is to reverence, you would see what reason I have for the strong faith I feel in the not distant future, when all the dark places of cruelty shall be filled with light. J. C. C.

San Francisco, Dec., 1869.

The above Letter was published in *The Woman's Journal*, and has also been kindly sent to us by one of the most excellent and influential friends of Education on this coast, whose writings appear in many of the Periodicals at the East. The faithful portraiture of the great evil in our midst, which forms the basis of the letter should, awaken public attention until this public shame is removed from our midst.

Woman must befriend and defend women, must rescue the fallen, and rebuke all those in authority who wink at shameless crime, and thus receive into the public treasury the price of guilt and shame under the flimsy garb of *License*

We are proud to announce that our Journal will from time to time receive valuable letters from the pen of this accomplished lady over the signature of "Berkly."

WHAT A MAN KNOWS.

What a man can write out clearly, correctly, and briefly, without book or reference of any kind, that he undoubtedly knows, whatever else he may be ignorant of. For knowledge that falls short of that—knowledge that is vague, hazy, indistinct, uncertain—I for one profess no respect at all. And I believe there never was a time or country where the influences of careful training were in that respect more needed. Men live in haste, write in haste—I was going to say, think in haste, only that the word thinking is hardly applicable to that large number who, for the most part, purchase their daily allowance of thought ready made. You find ten times more people now than ever before who can string words together with facility, and with a general idea of their meaning, and are ready with a theory of some kind about most matters. All that is very well as far as it goes, but it is one thing to be able to do this and quite another to know how to use words as they should be used, or really to have thought out the subject which you discuss.—*Lord Stanley.*

"How is it, my little boy," inquired a schoolmaster of one of his scholars, "that you do not understand this simple rule?" "I do not know, indeed," answered the youth, with a somewhat bewildered look; "but, sir, sometimes I think I have so many things to learn that I have not the time to understand them."

THE MULBERRY TREE.

The increasing demand for silk since Japan has been open to foreign trade has stimulated the production of the mulberry tree, and we were able to satisfy ourselves at different parts of our journey that its cultivation is decidedly on the increase. In general, the trees are planted along the borders of the fields; sometimes they appear in rows across them, at such intervals from each other as not to interfere with the other crops. At Uyeda, in Shinshiu, however, large fields are entirely devoted to the cultivation of the mulberry, the dwarf trees being planted on ridges, in lines, at a distance of over two feet from each other, the ridges being more than three feet apart; but this was a solitary instance as far as our observation was concerned. As a rule, the tree is kept in a dwarf state, the stumps not being allowed to grow more than from ten to eighteen inches above the ground. Sometimes they are permitted to attain a height of four or five feet, especially when they are grown in the middle of the field. The few full-grown trees which we observed were generally in the vicinity of dwellings. The reason alleged by the Japanese for preferring the dwarf to the full-grown mulberry is, that the leaves of the former are softer and better adapted for feeding the worms. Several kinds of mulberry trees are cultivated in Japan. Of these, as we were told, the most common are—the Yotsume, the Nedzumigashi, the Oha, and the Kikuha. These species are all known in Europe. The Yotsume has a narrow, irregular, and deeply-indented leaf, and is the earliest of the several kinds. Its buds and tender leaves are given to the worms during the first few days after their birth. The other three kinds bear the ordinary oval leaf, with regular serrated edges. Three modes of reproducing the mulberry tree were described to us—from seeds, from cuttings, and from layers. The latter is the favorite mode, and was stated to be as follows:—At the end of June the branches of a good healthy tree are bent to the ground, the middle portion being hidden in the earth, and the ends pointing upwards. By degrees the portion in the earth takes root, and in the following month of April the ends are divided from the parent branch, and are then removed to a ground which has been carefully prepared as a nursery. After twelve months, the shoots or young trees are transplanted from the nursery to the field where they are intended to remain permanently; and it is only after another twelve months, making a total of three years from the period of layering, that the branches are fit to be cut for the purpose of feeding the worms. The plantations are manured three times a year—in January, April, and July. Nightsoil, the lees of saké (a liquor fermented from rice), the lees of rape-seed after the oil has been pressed out of it, the excrements of the silk-worms carefully dried and preserved, decayed vegetable matter, etc., are used for that purpose. In July, straw mixed with manure is sometimes buried at the foot of each tree. In Shinshiu, where the greatest care is taken in the cultivation of the mulberry, manure is applied to the soil a fourth time, in October. The finest nurseries are situated in the valley of the Uyeda, where the dry sandy soil near the banks of the river is justly considered by the Japanese as the most favorable spot for rearing the mulberry. Pruning is practiced once a year, between April and July, at which period the branches are cut, and carried away for the feeding of the worms, as hereafter described. A certain number of trees are, however, left untouched in almost every plantation for the second rearing of the "bivoltini" worms. This takes place immediately after the first rearing—viz., in July or August, according to the season. The full-grown hard leaves of the unpruned mulberry are given to these summer worms after the second casting of the skin, up to which period they are fed on the tender new sprouts which have been plucked by hand off the pruned trees. The autumn leaves are allowed to fall, and are used as manure. After a period of from forty to fifty years the trees are considered to be exhausted. They are then taken up by the roots, and replaced by new ones.

The Sydney Morning Herald says:—"Silkworms were introduced here some years ago; but the venture failed, in the first place, because no market was then open for the cocoons and silk; in the second, because the persons who undertook the business were imperfectly informed of what was to be done to insure success. The market now appears to be accessible through the agency of the Association, and all we now require is the knowledge of which I speak. If this can be imparted in the way suggested, all will be plain sailing, or rather plain winding, for the mulberry will grow everywhere in New South Wales."

The following letter on the subject, from J. C. Holding, Esq., Secretary to the Silk Commission and Agricultural Society, is most interesting:

"Dear Sir—As the subject of Sericiculture has lately occupied the attention of the Legislature as well as the Agricultural Societies of this Colony, I shall feel much obliged if you can furnish me with any practical suggestions and assistance in carrying out this new branch of industry. The Government has already imported from France, and distributed 25,000 trees of the Morus Alba, and six bushels of seed; and some thousands of eggs were also procured, in 1863, from Japan, through the British Consul, who, being Cape-born, naturally took a deep interest in the welfare of the Colony.

The main difficulty is to procure healthy eggs; and any assistance that you may be able to render the colonists in this first essential of silk culture, will be much appreciated both by the Commission and the Colony at large.

I shall forward you by this opportunity a practical treatise, from which you will see that the mulberry tree not only thrives in every part of the Colony, but that the species known as the Cape mulberry must have been originally introduced from Japan by the Dutch East India Company, at a very early date, and has since been so thoroughly acclimatised as to receive the appellation of the "wild mulberry," being found even in forests and the remote districts along the frontier, and beyond the boundary line.

The fact alone is sufficient to justify the encouragement of silk culture, an industry particularly well suited to the native population, who cluster together, without any fixed employment, in villages and missionary institutions. A very favorable report, too, has been received from the Crown agent, regarding the quality of some cocoons which were sent to London, and from which some interesting specimens were manufactured. Should you wish for any samples of either cocoons or reeled silk, please let me know, and they shall be forwarded by the earliest opportunity. In the meantime, any publication containing practical suggestions and statistics concerning the exact number of worms, etc., will be thankfully received."

Nature, always bountiful and provident, is singularly assisting the extension of the valuable mulberry therein alluded to, for it is stated that "birds greedily devour the fruit; their digestive process does not affect the vitality of the seeds, which are voided in due time uninjured, often in the most solitary places, where they spring up, and in time become trees, and bear fruit, from whence again the same progress goes on."

Australian reports are even more satisfactory. The capabilities of that Colony are practically unlimited. With good seed, knowledge, labor, and skill, this country will, in due course, rival any other part of the world in Sericiculture.—Turkey, Persia, Russia, and several smaller countries are now persevering in silk production.

THE GREAT GOLD PANIC.

The trial of the great "Gold" financiers is now going on, and the revealment of their conspiracy shows what "Gold" will do.

By the facts elicited recently, it is shown that a Bank in New York with only $2,000,000 actually certified checks to the amount of $40,000,000, and at the same time proclaimed that they could carry and control $118,000,000—where's George Francis Train?

A special dispatch to the Boston *Daily Advertiser* says that the evidence already disclosed shows that on the great day of the gold battle, one of the banks, with two millions of capital and deposits, uttered certified checks to the amount of about $40,000,000, and that such papers were one of the essential means employed in carrying on the contest. Fisk, Gould, Corbin, and other conspirators are stated to have met in secret conference at that time to perfect their plans.

Fisk is said to have proposed a great well-displayed advertisement in all the morning newspapers, setting forth that they had control of one hundred and eighteen millions of gold, being all there was outside the Treasury; that they were strong enough to take all the Government might offer; that all contractors who appeared for settlement before three o'clock could make terms on the basis of gold at one hundred and sixty, and that a figure even higher than this would be charged those who failed to settle prior to that hour. One witness says this plan would probably have been adopted but that the conspirators feared violence from the mob. The idea of forcing gold to one hundred and sixty was acted on, however, and the whole day's operations till the smash occurred were based on Fisk's scheme. Whether Butterfield was or was not in the ring the members of the Committee do not yet say.

GARDEN GROUNDS LAID OUT,

THOSE WHO WISH THEIR GARDEN GROUNDS renewed and replanted, or those who desire to have Grounds Designed and laid out upon Scientific principles, and with correct taste and skill, as

Adapted to this Climate,

can have this work done to their satisfaction by calling at this Office, where all the best works on Gardening can be found, and where the various Styles, both European and American, can be seen. Grounds of any extent, from

ONE THOUSAND ACRES,

to small Gardens, in our City, will be designed and laid out and the TREES, PLANTS, Shrubs and Vines, and Bulbs all supplied of the very best variety and reliable quality, and the work done to complete satisfaction, by calling at the Office of the California FARMER.

None but Educated men ever engaged in such work.

Address WARREN & CO.,
Farmer Office.

IMPORTANT

....TO....

Nurserymen, Gardeners and Amateur Florists.

We beg to announce the arrival of the choicest and best assorted collection of

Rare Seeds

ever received on this Coast. They have been selected with the greatest care, from the first houses in Europe, and are comprised of

EVERGREEN, AND DECIDUOUS TREES AND SHRUBS, RARE AND BEAUTIFUL PERENNIALS, BIENNIALS, ANNUALS, ETC,

Also, new and choice Vegetables; the assortment is worthy the attention of all who admire the beautiful; and also the particular attention of gardeners who are anxious to secure something rare and new in the Vegetable kingdom.

We shall send them out in small parcels or individual packets, so that many may have the chance of securing the collection. Orders executed in rotation, and carefully packed for mailing any distance.

Persons remitting us Five Dollars, will have collections of Seeds sent them, worth intrinsically double the amount.

WARREN & CO.,
Farmer Office, 320 Clay Street, San Francisco.

Miscellaneous.

MERCHANTS'

GARGLING OIL

IS THE

BEST LINIMENT

IN THE WORLD

FOR MAN AND BEAST.

36 Years in Use.

Is good for Rheumatism, Chilblains, Corns, Whitlows, Caked Breasts, Sore Nipples, Cramps, Colts, Bites of Animals Weakness of the Joints, Contractions of the Muscles, Burns and Scalds, Frost Bites, Painful Nervous Affections, Chapped Hands, Lame Back Pain in the Side, Swellings, Tumors, Tooth Ache, Old Sores, Hemorrhoids or Piles, Flesh wounds, Galls of all kinds.

Sprains, Bruises, Cracked Heels, Ring Bone, Poll evil, Wind galls, Callous, Spavin, Sweeney, Fistula, Sitfast, External Poisons, Scratches or Grease, Springhalt, Sand Cracks, Lameness, Strains, Founded Feet, Mange, Horn Distempers, Garget in Cows, Cracked Teats, Foot Rot in Sheep, and many other diseases incident to Man and Beast.

R. D. Taylor, of Concord, Ky., says the Gargling Oil cured a horse of his, injured while plowing by attempting to step over a stump, almost severing the thigh from the body; also that he has used it in his family for fifteen years, and is the best remedy for Cuts, Burns, Bruises, Frost Bites, Strains, Rheumatism, etc., he ever used.

From Crump & Bros., Lochrans Landing, Ohio, Nov. 29th, 1856—We are pleased with your medicines. It has been the means of curing a great number of different diseases upon persons, as also upon horses. We think it cures all you recommend it to do. We want you to send us the larger proportion of the variety for "Family Use," in small bottles.

From Dr. J. P. Terrell, Warren, Ind., March 3d, 1856—I am engaged in the practice of medicine, and find your Gargling Oil an extremely efficient remedy in all cases where an external application is indicated.

From Dr. G. B. Neal, Burris, Iowa, 1865—I have practiced medicine in this county seventy years, and cheerfully recommend your Gargling Oil as the best liniment in use.

From Dr. T. W. Ellis, Troupville, Ga., Jan. 6th, 1856—If I could receive both boxes of the Gargling Oil it would not be too much, as I think I could soon find sale for it all, the inquiry being frequent since it is supposed that I have it for sale.

From Dr. Wm. S. McCall, Chamois, Mo., Nov. 9th, 1859—Your Gargling Oil is taking the shine off from all liniments of the day. If you ordered them I could procure dozens of certificates from the best citizens of the county.

Messrs. McLain & Bros., Wholesale Druggists, Wheeling Va., say, under date of July 24th, 1866 that they can safely recommend the Gargling Oil for more diseases than it is recommended for.

From J. R. Fisher, Uniontown, Pa., June 31st, 1867—Your Gargling Oil is doing much better here than formerly, since its virtues have become known—and the bottles put up for Family Use, without Stain, are much sought for.

Extract of a letter from Hon. Nathan Lindsey, County Judge of Shelby county, Iowa, dated Harlan, April 18th, 1867. It is decidedly preferred to any other liniment sold in this section.

Extract of a letter from Samuel S. Happ, dated Fallsburg, Ohio, July 17th, 1866—In June last, Henry Sallo had a yearling colt that had what was supposed to be Diphtheria, for more than ten days, so that it could not eat, and the throat swollen almost shut, and by the use of three or four applications of the dollar bottles, did the desired effect.

From A. G. Nicl, Lewisville, Cochocton county, Iowa, March 1859—I have used your Gargling Oil for the scratches on my horse, and it cured it with the first application.

From Enos Mather, Middleport, N. Y., July 23d, 1859—I purchased a bottle of your Gargling Oil of your Agent, A. S. Baker, at Middleport, and as yet have used but half of it. I think it has given me more relief in a case of severe rheumatism of long standing, than anything I have ever used before.

Extract of a letter from J. G. Pratt, dated Quincy, Chautauque county, N. Y., August 12, 1854—I have been acquainted with your medicine, (Gargling Oil) for the last fourteen years. It has proved to be a sure cure for Foot Rot in Sheep, for which I have sold the last bottle, and have calls almost daily for more. Please forward as soon as convenient.

Always enquire for MERCHANTS' CELEBRATED GARGLING OIL, and take no other.

Retail price, $1 00, 50 cents, and 25 cents.

Shake well before using, and rub on thoroughly before the fire or some warm substance.

The Gargling Oil has been used as a liniment for thirty six years. All we ask is a fair TRIAL, but be sure and follow the directions.

Ask your nearest druggist or dealer in Patent Medicines for one of our Almanacs and Vade Mecums, and read what the people say about the Oil.

The Gargling Oil is for sale by all respectable dealers throughout the United States and other countries.

Our testimonials date from 1833 to 1868, and are unsolicited Use the Gargling Oil and tell your neighbors what good it has done.

We deal fair and liberal with all and defy contradic

Manufactured at LOCKPORT, N. Y.,

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.
AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attaches to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Comb, or Gum:

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H.&L.

Is on the red cover of the packages

Railroad Lands.

CENTRAL PACIFIC RAILROAD,
LAND DEPARTMENT.

Sacramento, March 1st, 1867.

The following statement is made for the information of those who desire to purchase Lands from said Company:

1st. Congress has granted to the Company, all the alternate sections of the public lands designated by odd numbers, within a distance of 20 miles on each side of the railroad;—excepting lands to which a pre-emption or homestead claim had attached prior to the 12th of September, 1862, and excepting lands reserved by the United States as mineral.

2d. The Company has no interest in even sections. To constitute a valid pre-emption or homestead claim within the above exception, the party must have resided on the land prior to September 12th, 1862, and continuously since that time. He must also on that day have been over twenty-one years of age and be the head of a family and have filed his claim in the United States Land Office within the time required by law. If he has not these requisites, or has neglected to file, he will have to buy of the Railroad Company.

3d. All persons who desire to purchase lands from the Railroad Company, including settlers, pre emptors, and other claimants, should make application to the Land Agent, B. B. Redding, at the Land Office of the Company, in Sacramento, either personally or by letter, describing the land by legal subdivisions. This application will be filed and the party will be allowed three months to complete the purchase, and during this time the land will not be sold to another without giving such applicant thirty days previous notice. If the purchase is not completed within three months, the land will be open to purchase by others.

4th. Persons who have valid pre-emption or homestead claims to any tract on an odd numbered section, can purchase the same from the Railroad Company at the Government price of $1.25 per acre in greenbacks, and upon the usual credit of five years if they so desire, by filing an abandonment of their claim in the U. S. Land Office, blanks for which will be furnished by the Land Agent of the Company. Such purchase from the Company has these advantages over a purchase from the Government: The party can leave the land if necessary—he can sell or mortgage it—he is saved the payment of lawyers' fees and expenses of witnesses to go to the Land Office to "prove up" his claim—he can get his title perfected in less time—and he can buy on credit at a low rate of interest.

5th. Actual occupants of lands belonging to the Company, will generally have a preference in the purchase at the regular price. No addition to the price is made where there are improvements on the land made by the settler. Where there are conflicting claimants who apply to purchase, an adjudication of their respective claims will be made by the Land Agent, upon due notice given to both parties.

6th. No lands are sold by the Company or the Government, until after they have been surveyed and the plats returned to the Land Office.

7th. The Company sells ordinary agricultural lands at $2 50 per acre, in gold (except sales to pre-emptors as above). Timber lands, lands in the immediate vicinity of the railroad, and tracts having special value above ordinary farming lands, will be sold at prices and on terms fixed by the Board of Directors.

8th. Persons desiring to do so can buy on a credit of five years by paying twenty per cent. of the price down, and interest annually in advance on the remainder at ten per cent. per annum. Thus a purchaser of one hundred and sixty acres at $2 50, which amounts to four hundred dollars, will pay twenty per cent., or eighty dollars, with interest on three hundred and twenty dollars, which is thirty-two dollars—in all one hundred and twelve dollars, paying each year thereafter thirty-two dollars interest, and the three hundred and twenty dollars at the end of five years. But three hundred and twenty dollars can be paid at any time within the five years, but not by installments, and the purchaser will then be immediately entitled to a deed

9th. Applications to purchase lands can be filed in the Land Office of the Company at any time after the same have been surveyed by the Government; but no applications will be acted upon until three months after the maps have been filed in the United States Land Office. Occupants of the railroad lands who desire to purchase should therefore be prompt in filing their applications in the office of the Company within this time. Blank applications will be furnished to all who desire to purchase. No sales will be made except by legal subdivisions according to Government surveys. Purchasers can buy as large an amount of land as they may wish.

10th. No sales are made by the Company until the land is listed over to it by United States Land Officers. Purchasers are thus assured that the title they obtain is perfect.

B. B. REDDING,
Land Agent C. P. R. R. Co., Sacramento.

Valuable Patents
FOR SALE.

San Francisco, Feb. 17.

GRAIN AND FLOUR MARKET.

The Grain and Flour Market must now recede, speculators in Wheat and Breadstuff will have no way to "make a raise"—*Croaking* won't do. European prices are lower still, Eastern Markets ditto, and glutted, and now with continued refreshing rains and the *best set* grain ever had in all our best grain growing regions, there can be no cause for hoping a rise in price. There may be full prices, even extra rates paid by Millers for some choice lots for special purposes—but *high prices* can rule no more for a long time, and those who have believed in a rise have seen *their* best chances go by, they have waited too long, the tide has turned.

Dairy—Butter, Cheese, Eggs etc.

(M. B. French & Co.)

Our Dairy Market is better supplied but prices run low, and are gradually falling. Butter and Eggs are getting quite cheap, and will be much cheaper. The large and continued importations of Eastern Butter has brought our prices down, and the feed season has also come to make it lower.

PREMIUMS.

The Early Rose Potatoe.

The wonderful celebrity which is now being attained by the unprecedented excellence of the "Early Rose Potatoe," its great productiveness beyond that of any other potatoe known, its early maturity (7, 8 and 9 weeks) surpassing all others, and its great superiority in *quality*, induces us to try to spread its culture as widely as possible.

We therefore will now offer to every *new subscriber* to the California Farmer, from the commencement of our new Volume, Four pounds of the "Early Rose Potatoe," mailed to them *free of cost*, as a Premium for 1870 This will give them seed for another year, equal to 200 to 300 lbs.

P. S. All new subscribers to our present Volume who kindly sent their names before this, if they will send us word they will use this seed they shall have the parcel mailed to them free.

RARE FLOWER SEEDS.

We have several fine collections of new and choice Flower Seeds from the well known Florists, "Dreer" of Philadelphia, and James Vick of Rochester N Y. Those who wish "Gems in Flora," will find them at our Office, No. 320 Clay Street.

Shade Trees! Shade Trees!!

ORNAMENTAL & SHADE TREES

LARGE COLLECTION OF TREES.

EXTRA SIZE SHADE TREES.

Elm and Ash Trees.

A splendid lot of very choice and large size ELM and ASH Trees, for PUBLIC SQUARES, and STREETS, will be offered in Lots to suit Purchasers.

Mulberry Trees.

Large size Mulberry Trees, White, Red, and MORUS MULTICAULIS, of all sizes, suitable for planting out as Shade or Ornamental Trees, and also as Fruit Bearing, or for feeding the Silk Worm.

The Mulberry Tree makes a handsome Shade Tree, and is an Ornamental and Fruit Tree combined

These Trees will be sold in lots to suit purchasers.

SAGE ORANGE TREES.

A few lots of Osage Orange Trees for setting out as Ornamental Trees. Also

SILK WORM EGGS

Of the French Annual Species, for sale

The above will be sold on the best of terms.

P. S.—Orders addressed to A. P. Smith, will be promptly attended to.

Sample Trees can be seen at the FARMER OFFICE, where information of the quality of the Trees and the price can be had.

A. P. SMITH.

Of the well known Smith's Gardens,

Sacramento City, Cal.

COMMISSION

SALES-ROOM

— AND —

Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandize for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash, or bills could be sent by Express, to be collected on delivery

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns, and which we have the exclusive sale for this Coast.

We also call attention to the

NEW GATE,

A most valuable invention, particularly to Farmers and Stock Raisers. County Rights for sale.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

The following are the kind of Goods imported or consigned to us for sale and which can be offered on the most favorable terms:

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence In ordering Grass Seeds, please state the nature of the soil and the extent of land to be down

FINEST MIXED LAWN GRASSES,
FINEST MIXED GRASSES FOR PERMANENT PASTURES.
FINEST MIXED GRASSES FOR SHEEP-WALKS
FINEST MIXED GRASSES FOR MEADOW-LAND.
PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR CHILI CLOVER,
KENTUCKY BLUE GRASS.
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental

TREE SEEDS.

TOBACCO SEED,
COTTON SEED,
COFFEE SEED,
TEA SEED.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

These will be ready in the months of November and December

Collections can be forwarded by post at the following rates:

50 Packets choicest and best			$10 00
25	do	do do	5 00
12	do	do do	3 00
50 Packets Good Selected			6 00
25	do	do do	3 00
12	do	do do	1 50

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference

Silk Culture:

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

FLOWERING BULBS.

Lilies, Tulips, Hyacinths, Amaryllis, Anemones Ranunculus, Narcissus, Tuberoses, Peony, Roots, Crocus, Snow-Drops, Very Choice Gladioli,

Choice collections of Flowering Bulbs, comprising all the most showy and leading varieties from $5 00 and upwards.

EVERGREEN AND DECIDUOUS SHRUBS,

ORNAMENTAL TREES.

FRUIT TREES.

The newest and most approved sorts:

Peaches, Figs,
Plums, Almonds,
Cherries, Walnuts,
Apricots, Nectarines,
Pears, Grapes,
Apples, Etc. Etc.

Also the best varieties of Strawberries, Raspberries, Gooseberries, Currants, and Blackberries.

PERPETUAL FLOWERING ROSES

Of the best kinds.

GREENHOUSE AND BEDDING PLANTS.

Any one desirous of having their Gardens look gay through out the season, can be furnished with the plants at a reasonable rate, by applying at this office.

Every information given as to the cultivation of Plants and raising of Seeds, etc. Also respecting the mode and best systems of Pruning all varieties of Trees, etc.

Gardens and Grounds designed and put in order, and every article furnished for same.

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference

WARREN & CO.,

Farmers' Headquarters. 320 Clay Street, up-stairs.

SPLENDID

PREMIUMS!

1870!

OUR SEVENTEENTH YEAR

AND

THIRTY THIRD VOLUME

OF THE

"California Farmer."

With the New Volume in January we begin our Seventeenth Year of Labor with this Journal.

THE CALIFORNIA FARMER

PREMIUMS.

The CALIFORNIA FARMER will club with the following Magazines and Journals, and furnish them for the year 1870 at the following rates.

The New York Independent,

PREMIUM ENGRAVINGS,

The California Farmer and the Independent both for $7 50, and to present them with Richie's splendid steel engravings of Grant and Colfax, the price of which is $2 each, thus giving them these Two Splendid and Popular Pictures worth $4, and both these Papers for $7 50

The CALIFORNIA FARMER and the New York Christian Union, new series, Edited by Rev Henry Ward Beecher, $7 50

The CALIFORNIA FARMER and the Harper's Monthly, Weekly and Bazar, $14 00

The CALIFORNIA FARMER and either of Harper's Magazines delivered post paid $3 50

The CALIFORNIA FARMER and the New York Weekly Tribune, $3 50

The CALIFORNIA FARMER and the American Agriculturist, $3 00

The CALIFORNIA FARMER and the New York Monthly Horticulturist with extra Steel Engravings of "Country Life," $1 00

The CALIFORNIA FARMER and the Phrenological Journal of New York now in its 50th Volume, $1 50

The CALIFORNIA FARMER and the American Stock Journal, $3 50

We shall add others with our next issue.

Any other Journal or Periodical desired we will furnish with the FARMER on the most liberal terms when desired.

The Terms of the Farmer will remain the same—$5 per year, $3 for six months, (gold price) and $1 extra when payments have been delayed and these terms are unchangeable. A liberal allowance for clubs; when five copies are paid for six copies will be furnished.

We call attention to the Premiums offered, and the Union of other Journals with ours.

WARREN & CO., Editors and Publishers.

320 *Clay St.*, San Francisco.

GYPSUM.

(Sulphate of Lime.)

This well known but most wonderful fertilizer has not yet been practically introduced into the Agricultural interests or before the minds of our California cultivators, for the reason that there was no supply, and because it was hard to make them believe our lands needed manuring.

The time, however, has arrived when, by the admitted fact of the deterioration of our soil and the lessening of crops, something must be done to restore the soil and bring it into that state of fertility necessary to make it profitable to cultivate the soil.

Gypsum is a compound of Sulphuric Acid and Lime, and the object of this fertilizer is the firing of Ammonia, thus making it the direct food of plants, either by supplying the Sulphate of Lime or by its decomposition, affording the Sulphur so necessary to the due development of certain plants.

Sprengel's Analyses shows the quantity of Lime and Magnesia, Sulphuric and Phosphoric Acids to be very large in the following plants, and for these this fertilizer has no superior:

Wheat, Barley, Oats, Potatoes, Cabbage, Swedish Turnips, Clover, Beets, Turnips, and root crops generally; thus ensuring to a certainty its great importance to the Farmers.

Liebig's Natural Laws of Husbandry gives conclusive proofs of its superiority as a fertilizer on Clover and Grasses, furnishing details of experiments made by distinguished men in various parts of Europe.

According to the experiments made by Backholts, Gypsum is composed of *thirty-three* parts of Lime, *forty-three* of Sulphuric Acid, and *twenty-four* of the water of crystallization.

Gypsum is often called Plaster of Paris, but this is wrong—it only takes that name and character when it has been deprived of its water of crystallization by fire; there it becomes *Calcined Gypsum* or Plaster.

Gypsum for Dry Countries like California, will prove immensely valuable, as when used as a fertilizer in our hot and dry soil, its waters of crystallization are seperated by means of our hot climate and go at once to benefit the plants, while the Acids and Sulphate of Lime is taken up by the soil, enriching it to a very great degree.

The undersigned is now prepared to furnish this valuable fertilizer by the quantity to all who desire to try its well attested virtues.

CHAS. J. JANSON,

222 BATTERY STREET.

STILL TRIUMPHANT!!

THE COMMITTEE OF AWARDS OF OUR STATE and Mechanics' Fair, aware of the superior merits of the H. & L AXLE GREASE over all Imitators, have again awarded HUCKS & LAMBERT their Premium, their article having stood the test for over fifteen years. They are now prepared to sell their well known Axle Grease at as low a price as any other in the market, New York and Chicago not excepted.

P. S.—To consumers—Don't trust to the red cover ask for HUCKS & LAMBERT'S AXLE GREASE Manufactory, No. 141 Natoma street. Depot No. 320 Jackson street

THE FUNERAL OF GEORGE PEABODY.

These most interesting ceremonies which took place after the landing of the coffin from the steamer at Portland, Maine, and thence to Danvers (now the town of Peabody) have been heralded far and wide.

The Oration, which was delivered by the Hon. Robert C. Winthrop of Boston, is of that high order of merit deserving to be perpetuated, and we believe our readers will be glad to obtain it; we therefore publish it in this and the next issue—its length precludes it in one issue

ORATION.

While I have been unwilling, my friends, wholly to decline the request of your Committee of Arrangements, or to seem wanting to any service which might, perchance, have gratified him whom, in common with you all, I have so honored and loved, I have still felt deeply, and I cannot help feeling more deeply than ever before, that any words of mine might well have been spared on this occasion.

The solemn tones of the organ, the plaintive notes of the funeral chant, the consoling lessons of the Sacred Scriptures, the fervent utterances of prayer and praise—these would seem to me the only appropriate—I had almost said the only endurable—interruptions of the silent sorrow which befits a scene like this.

Even were it possible for me to add anything worth adding to the tribute on both sides of the ocean which already have well nigh exhausted the language of eulogy, the formal phrases of a detailed memoir or of a protracted and studied panegyric would congeal upon my lips, and fall frozen upon the ears and hearts of all whom I address, in presence of the lifeless form of one who has so long been the support, the ornament, the dear delight of this village of his nativity.

We cannot, indeed, any of us, gather around these cherished remains, and prepare to commit them, tenderly and affectionately, to their mother earth, without a keen sense of personal affliction and bereavement. He was too devoted and loving a brother; he was too kind and thoughtful a kinsman; he was too genial and steadfast a friend not to be missed and mourned by those around me, as few others have ever been missed and mourned here before. I am not insensible to my own full share of the private and public grief which pervades this community.

And yet, my friends, it is, by no means, sorrow alone which may well be indulged in by us all at such an hour as this. Other emotions, I hazard nothing in saying, for other emotions besides those of grief, are, even now, rising and swelling in all our hearts—emotions of pride, emotions of joy, emotions of triumh.

Am I not right? How could it be otherwise? What a career has that been, of which the final scene is now, at length, before us! Who can contemplate its rise and progress, from the lowly cradle in this South Parish of old Danvers—henceforth to be known of all men by his name—to the temporary repose in Westminster Abbey, followed by that august procession across the Atlantic, whose wake upon the waters will glow and sparkle to the end of time, growing more and more luminous with the lapse of years—who, I say, can contemplate that career, from its humble commencement to its magnificent completion, without an irrepressible thrill of admiration and almost rapture?

Who, certainly, can contemplate the immediate close of this extraordinary life without rejoicing, not only that it was so painless, so peaceful, so happy in itself; not only that it was so Providentially postponed until he had been enabled, once more, to revisit his native land, to complete his great American benefactions, to hold personal intercourse with those friends at the South for whose welfare the largest and most cherished of these benefactions was designed, and to take solemn leave of those to whom he was bound by so many ties of affection or of blood—but that it occurred at a time and under circumstances so peculiarly fortunate for attracting the largest attention, and for giving the widest impression and influence to his great and inspiring example.

For this, precisely this, as I believe, would have been the most gratifying consideration to our lamented friend himself, could he have distinctly foreseen all that has happened since he left you a few months since. Could it have been foretold him as he embarked, with feeble strength and faltering steps on board his favorite Scotia, at New York, on the 23d September last, not merely that he was leaving kinsfolk and friends and native land for the last time, but that hardly four weeks would have elapsed, after his arrival at Liverpool, before he should be the subject of funeral honors, by command of the Queen of England, and should lie down, for a time, beneath the consecrated arches of that far-famed Minster, among the kings and counsellors of the earth; could it have been foretold him that his sons would be the theme of eloquent tributes from high prelates of the Church, and from the highest Minister of the Crown, and that Great Britain and the United States—not always, not often, alas! in perfect accord—should vie with each other in furnishing their proudest national ships to escort his remains over the ocean, exhibiting such a funeral fleet as the world, in all its history, had never witnessed before; could all this have been whispered in his ear, as it was catching those last farewells of relatives and friends—he must, indeed, have been more than mortal not to have experienced some unwonted emotions of personal gratification and pride.

But I do believe, from all I have ever seen or known of him,—and few others, at home or abroad, have of late enjoyed more of his confidence,—that far, far above any feelings of this sort, his great heart would have throbbed as it never throbbed before, with gratitude to God and man, that the example which he had given to the world, by employing the wealth which he had accumulated during a long life of industry and integrity, in relieving the wants of his fellow-men wherever they were most apparent to him; in providing lodgings for the poor of London; in providing education for the children of our own desolated South; in building a Memorial Church for the parish in which his mother had worshipped; in founding or endowing institutes, and libraries and academies of science in the town in which he was born, in the city in which he had longest resided, and in so many other places with which, for a longer or a shorter time, he had been connected,—that this grand and glorious example of munificence and beneficence would be so signally held up to the contemplation of mankind in a way not only to commend it to their remembrance and regard, but to command for it their respect and imitation. This I feel assured he would have felt to be the accomplishment of the warmest wish of his heart, the consummation of the most cherished object of his life.

Our lamented friend, indeed, was not without ambition. He not only liked to do grand things, but he liked to do them in a grand way. We all remember those sumptuous and princely banquets with which he sometimes diversified the habitual simplicity and frugality of his daily life. He was not without a decided taste for occasional display—call it even ostentation, if you will. We certainly may not ascribe to him a pre-eminent measure of that sort of charity which shuns publicity, which shrinks from observation, and which, according to one of our Saviour's well-remembered injunctions, "doeth its alms in secret." He may, or he may not, have exercised as much of this kind of beneficence as any of those in a similar condition around him. I fully believe that he did. We all understood, however, that

> "Of that best portion of a good man's life,
> His little, nameless, unremembered acts
> Of kindness and of love,"

there can be no record except on high,—or in the grateful hearts of those who have been aided and relieved. That record shall be revealed hereafter. The world can know little or nothing of it now.

But any one must perceive, at a glance, that the sort of charity which our lamented friend illustrated and exercised, was wholly incompatible with concealment or reserve. The great Trusts which he established, the great Institutions which he founded, the capacious and costly Edifices which he erected, were things that could not be hid, which could not be done in a corner. They were, in their own intrinsic and essential nature, patent to the world's eye. He could not have performed these noble acts in his lifetime as it was his peculiar choice to do, and as it will be his peculiar distinction and glory to have done, without suffering himself to be "seen of men," without being known, and recognized, and celebrated as their author. He must have postponed them all, as others have done, for posthumous execution; he must have refrained from parting with his millions until death should have wrested them from a reluctant grasp,—had he shrunk from the notoriety and celebrity which inevitably attend upon such a career.

He did not fail to remember, however—for he was no stranger to the Bible—that there were at least two modes of doing good commended in Holy Writ. He did not forget that the same glorious Gospel, nay, that the same incomparable Sermon on the Mount, which said, "Let not thy left hand know what thy right hand doeth," said, also, "Let your light so shine before men that they may see your good works, and glorify your Father which is in Heaven." This, this might almost be regarded as the chosen motto of his later life, and might, not inappropriately, be inscribed as such on his tombstone.

Certainly, my friends, his light has shone before men. Certainly they have seen his good works. And who shall doubt that they have glorified his Father which is in Heaven? Yes, glory to God, glory to God in the highest, has, I am persuaded, swollen up from the hearts of millions in both hemispheres with a new fervor, as they have followed him in his grand circumnavigation o benevolence, and as they have witnessed, one after another, his multifold and magnificent endowments. And his own heart, I repeat, would have throbbed and thrilled as it never throbbed or thrilled before with gratitude to God and man, could he have foreseen that the matchless example of munificence which it had been the cherished aim of his later years to exhibit would be rendered, as it has now been rendered, so signal, inspiring, so enduring, so immortal, by the homage which has been paid to his memory by the princes and potentates as well as by the poor of the Old World, and by the Government and the whole people of his own beloved country.

I have spoken of the exhibition of this example as having been the cherished aim of his later years; but I am not without authority for saying that it was among the fondest wishes of his whole mature life. I cannot forget, that, in one of those confidential consultations with which he honored me some years since, after unfolding his plans, and telling me substantially all that he designed to do—for almost everything he did was of his own original designing—and when I was filled with admiration and amazement at the magnitude and sublimity of his purposes, he said to me, with that guileless simplicity which characterized so much of his social intercourse and conversation, "Why, Mr. Winthrop, this is no new idea to me. From the earliest years of my manhood I have contemplated some such disposition of my property; and I have prayed my Heavenly Father, day by day, that I might be enabled before I died to show my gratitude for the blessings which He has bestowed upon me, by doing some great good to my fellow-men."

Well has the living Laureate of England sung, in one of his latest published poems—

> "More things are wrought by prayer
> Than this world dreams of."

That prayer has been heard and answered.—That noble aspiration has been more than fulfilled. The judgment of the future will confirm the opinion of the hour; and History, instead of contenting herself with merely enrolling his name in chronological or alphabetical order, as one among the many benefactors of mankind, will assign him—unless I greatly mistake her verdict—a place by himself, far above all competition or comparison, first without a second, as having done the greatest good for the greatest number of his fellow-men—so far, at least, as pecuniary means could accomplish such a result—of which there has thus far been any authentic record in merely human annals.

It would afford a most inadequate measure of his munificence were I to sum up the dollars or the pounds he has distributed; or the number of persons whom his perennial provisions, for dwellings or for schools, will have included, in years to come, on one side of the Atlantic or the other. Tried even by this narrow test, his beneficence has neither precedent nor parallel. But it is, as having attracted and compelled the attention of mankind to the beauty, the nobleness, the true glory of living and doing for others; it is, as having raised the standard of munificence to a degree which has almost made it a new thing in the world; it is, as having exhibited a wisdom and a discrimination in selecting the objects, and in arranging the machinery, of his bounty, which almost entitles him to the credit of an inventor; it is, as having, in the words of the brilliant Gladstone, "taught us how a man may be the master of his fortune, and not its slave;" it is, as having discarded all considerations of caste, creed,

(*Concluded.*)

[Written for the CALIFORNIA FARMER.]

GOING AROUND IN A WAGON.

COL. WARREN—DEAR SIR:

After stopping all night at Amherst we took an early start for the North, with no definite point in view. We traveled until about eleven o'clock, and began to think of something to eat, when suddenly we came upon an antiquated village that had, from all appearances, "entertainment for man and beast." A great piece of timber was set into the ground and, suspended from a beam at the top, was a wide board on which was painted in fair letters, "*Inn.*" We went to the door—which was of the old Dutch style, divided half way up—and knocked for admittance, and had plenty of time to note the inside before any one rrived. The floor was nicely sanded and marked off in all sorts of figures, but no sign of footsteps thereon. We thumped and shook the nether door until at last a good-looking female made her appearance and enquired what we wanted. We thought she knew, but we told her we wished to get in. She said her husband was not allowed to sell liquor and therefore he would not entertain strangers. We tried persuasion but it was no good, and we were compelled to jog along. We came in sight of an old-fashioned house, painted red, standing in a long way from the road. We hitched our horse, and going up the path, which was bordered by demoralized bean poles, reached the porch and gave a thundering knock, which brought to the door an antiquated dame, with one eye on some maple sugar hard by and the other firmly fixed upon ourselves. She demanded our errand; we intimated, by a kind of gasp, it was grub. She said no. We said something about horse. She said her husband was at the mill, nearly half a mile away; we might go and see him. We demurred, then consented: Saw an opportunity to interest her; spoke of her fine-looking sugar, and asked the price. She said seventeen cents. Could buy just such in Springfield for twelve cents. Told her it looked nice, but fibbed; think it must have been sour. Went after her husband; he was glad to see us, and told us he was about to see how thin he could saw a board; said his mill was so perfect that he could cut a veneer. We said yes, and fibbed again. Asked about hay, corn, anything. Willing to pay, and all that, but no go; nothing to do with it; his son was the man; working across the river, about a mile. Could we get a bite ourselves. See the "old woman." How far ahead was the village. About four miles. Started on; Bill sighed; we thought *damn*, and budged. We reached the village, overtaking a man, who told us there was no hotel, and he did not believe we could get anything for ourselves or horse, but he said *he* would ask us only his family was very sick; possibly Pinchem, up at the other end of the village, might have some hay or grain. He said it low, but Bill heard him and started on, so we followed, but vain our hopes! Pinchem was not at home. We proposed to move on their works but dreaded their reinforcements, so we retreated in good order and took up our line of march for Northfield, where we arrived about eight o'clock that night, having left Amherst early in the morning, riding all day long without meeting one hospitable individual to give grub to a hungry man!

We found excellent accommodations at Northfield at what was called at the time, we believe, the "Northfield Hotel," kept, if we remember right, by Doctor Mea de—a jolly fellow—on the strict temperance plan. All the rum and other liquors were kept down cellar, under the stairs, where no one could get at them unless he wished to and perhaps was a little friendly towards the Doctor. We remained there a number of days, most of which time it rained and drizzled so that little could be done outside; however, we managed to sell quite a lot of trees and plants. The Doctor himself was perfectly willing to buy; he was a little in arrears from the fall before and, of course, we were anxious to settle up.

A young ladies' boarding-school was kept in a part of the building, which was a large one, and quite a number of the young ladies boarded in the hotel, which did not take from the attractions for a young man. However, the time came for our departure, when we bid farewell to Northfield for the last time. We took a new route home, where we arrived in due time, having secured some valuable trade, a greater part of which orders were already filled, we having written from the places where they were taken.

Our journey down the Connecticut valley was a very pleasant one, and we remember but one or two incidents worth remembering. The following interested us very much at the time: We were jogging along, when something seemed to keep rattling in our ears. We could not imagine what it was. Finally it grew so loud we concluded it must be some old rattle-box of a wagon somewhere on the road, but nothing came in sight, and we were sorely puzzled to make it out, but we did after a time, in the following manner: Observing quite a number of buildings down in a ravine, we were curious to know their meaning when, seeing a man coming up, we questioned him in regard to that infernal racket, and were told it was his "polishing-box" in operation. We expressed a wish to see the monster, when he kindly escorted us through the establishment, which proved to be a rake factory,—showing us everything, even to the non-descript that had so excited our curiosity, which was nothing more or less than a large cylinder some three feet in diameter and eight or nine feet long, filled about one-third full of rake-handles and set in motion, and we leave the reader to imagine the noise that would naturally follow. The constant friction caused the wood to be polished in the most beautiful manner without a hand stroke. We have seen many of the rakes from that establishment since then, some of them in this then-unheard-of city, where they may be found, doubtless, to-day, neatly ticketed with fame and ville, which the writer has now forgotten.

So ended our first trip selling trees—"Going Around in a Wagon." "Bill" reached home well, but could not survive such a campaign long; poor old fellow! he was obliged to succumb to the bots, in spite of antimony and tobacco, and was buried with due honors, and the following year an immense pumpkin-vine adorned the hero's grave *Requiescat in pace!*

PHILMORE.

THE YANKEE'S INTERVIEW WITH OLE BULL.

An amusing episode in the life of the celebrated Ole Bull occurred during his recent visit to Boston. A Yankee fiddler by the name of Hill, having heard many wonderful things concerning the great violinist, determined to "*beard the Bull in his den.*" Learning that the "eccentric Norwegian" was stopping at the Revere House, he wended his way thither, but before arriving at the hotel his courage failed him, and he concluded to shut up a musical friend to accompany him. The two proceeded as far as the steps of the hotel, when the *friend* concluded that he would not go further. "Well," says Hill, (who, unfortunately, stammers considerably,) "I'm bound to see tha-tha-that great fi-fi-fiddler, anyhow," and abruptly leaving his less courageous companion, he addressed a servant who was standing near, inquiring if Ole Bull was in his room. "Give me your card, sir," said the servant, "and I will see." "I-I-I hain't got no cards," rejoined Hill. "What do you want a ca-ca-card for?" "*Gentlemen* have cards," meekly remarked the servant." Do you mean to say I-I-I am *not* a gentleman!" said Hill, and the waiter narrowly escaped a broken head. Without further ceremony Yankee made for the office, and ascertaining the number of the musician's room gave a tremendous rap at the door, his courage rising with the occasion.) "Come in," said a voice inside. We will tell the remainder of the story, as related to us by Hill himself. "As I entered the room I saw a fine looking gentleman standing by the glass shaving himself. "Ha-ha-how do you do sir," said I; "my name is Hill, I play the fi-fi-fiddle, and I heard you have got a *bub-bub-buster.*" "Yes," replied Ole Bull, (for it was the master himself,) "I hav von very fine instrument. Von't you sit down Mr. Hill, and I vill show you my violin?" He immediately unlocked the case of his valued *Di Salo*, and, handing it to me, asked me to play for him, at the same time resuming his shaving. Taking the violin I began to show him *what I could do*, and played everything I could think of, and I thought would please him.

I never before heard such a vi vi-violin; it seemed to *go go itself*. After Ole Bull had finished his toilet, he stepped toward me, and knitting his great shaggy eyebrows, asked me "how I liked his violin." "Fir-fir-first-rate," said I. "Von't you play *sometings*?" said he again—strongly accenting the last word. This was rather an unkind cut, as *I had been playing "somethings" for at least half an hour!* still I turned the conversation by asking him if *he* would not play something. "Oh, yes," said he, and taking the violin, he made one dash of the bow, and the way the notes ran all around the room, was a caution to fi-fi-fiddlers in general and *myself* in particular. I could almost feel my hair stand on end. If some one had only *hollered* FIRE, so I could have had a sudden excuse for leaving, I would have given them a new hat. After the first shock to my nerves had subsided, however, I began to feel at home, but I shall never play for a great fiddler again until *I give him the first chance*—to play *somethings*—himself.

SEEDS, PLANTS, ETC., BY MAIL.

The following are the rates by Law:

For all parcels of	*four ounces*	2 cts.
" "	*eight ounces*	8 "
"	*one pound parcels*	8 "
"	*four pound* "	32 "

No parcels to be above *four pounds*.

All parcels should be carefully done up and sealed.

Agriculture.

WHAT I KNOW OF FARMING.

BY HORACE GREELEY.

ESSAY NUMBER SIX.

LAYING OFF A FARM—PASTURING

Whoever finds himself the newly installed owner and occupant of a farm, should, before doing much beyond growing a crop in the ordinary way study well its character, determine its capacities, make himself well acquainted with its peculiarities of soil and surface, with intent to make the most of it in his future operations. I would devote at least a year to this thoughtful observation and study.

To one reared amid the rugged scenery of New-England, or on either slope of the Alleghany ridge all prairie farms look alike, just as a European supposes this to be the case with all negroes. A better acquaintance will show the average prairie quarter-section by no means an unbroken meadow "level as a house floor," but, diversified by water-courses, "sloughs," and gentle acclivities—sometimes by considerable ravines "barrens" or elevated "swales," thinly covered with timber, or brush, or both. But I will contemplate more especially a Northern farm, made by of hill and vale or glade, rocky ridge and skirting bog or other low land, with a wood lot on the rear or not far distant, and clumps or belts of timber irregularly lining brook and ravine, or lurking in the angles and sinuosities of walls and wooden fences, and a ragged, mossy orchard sheltered in some quiet nook, or sprawling over some gravelly hill-side.—A brook, nearly dry in August, gurgles down the hill-side or winds through the swamp: while fields moderately sloping here and nearly level there, interposed here and there, have severally been devoted, for a generation or more, alternately to grain and grass—the latter largely preponderating. We will suppose this farm to measure from 50 to 150 acres.

Now, the young man who has bought or inherited this farm may be wholly and consciously unable to enter upon any expensive system of improvement for the next ten years—may fully realize that four or five days of each week must meantime be given to the growing or earning of present bread—yet he should none the less study well the capacities and adaptations of each acre, and mature a comprehensive plan for the ultimate bringing of each field into the best and most useful condition whereof it is susceptible, before he cuts a living tree or digs a solitary drain. He is morally certain of doing something—perhaps many things—that he will sadly wish undone, if he fails to study peculiarities and mature a plan before he begins to improve to fit his several fields for profitable cultivation.

And the first selection to be made is that of a pasture, since I am compelled to use an old, familiar name for what should be essentially a new thing. This pasture should be as near the center of the farm as may be, and convenient to the barns and barnyard that are to be. It should have some shade, but no very young trees, should be dry and rolling, with an abundance of the purest living water. The smaller this pasture lot may be, the better I shall like it, provided you fence it very stoutly, connect it with the barn yard by a lane if they are not in close proximity, and firmly resolve that outside of this lot, this lane, this yard and the adjacent stable, your cattle shall never be seen, unless on the road to market. Very possibly, the day may come wherein you will decide to dispense with pasturing altogether; but that is, for the present, improbable. One pasture you will have: if you live in the broad West, and purpose to grass extensively, it will doubtless be a large one: but permitting your stock to ramble in Spring and Fall all over your own fields—(and perhaps your neighbors also)—in quest of their needful feed, biting off the tops of the finer young trees, trampling down or breaking down some that are older, rubbing the bark off of your growing fruit trees, and doing damage that years will be required to repair, I most vehemently protest against.

The one great error that misleads and corrupts mankind is the presumption that something may be had for nothing. The average farmer imagines that whatever of flesh or of milk may accrue to him from the food his cattle obtain by browsing over his fields or through his woods, is so much clear gain—that they do the needful work, while he pockets the net proceeds. But the universe was framed on a plan which requires so much for so much, and this law will not submit to defiance or evasion. Under the unnatural, transitory conditions which environ the lone squatter on a vast prairie, something may be made by turning cattle loose and letting them shirk for themselves; but this is at best transitory, and at war with the exigencies of civilization. Whoever lives within sight of a school house, or within hearing of a church bell, is under the dominion of a law alike inexorable and beneficent—the law that requires each to pay for all he gets, and reap only where he has sown.

You hardly have a pasture so small that it will not afford hospitality to weeds and prove a source of multiform infestations. The plants that should flourish and be diffused will be kept down to the earth; those which should be warred upon and eradicated will flourish untouched, ripen their seed and diffuse it far and wide. Thistles, white Daisy, and every plant that impedes tillage and diminishes crops, are nourished and diffused by means of pastures.

I hold therefore, that the good farmer will run a mowing machine over his pasture twice each Summer—say early in June, and then late in July—or, if his lot be too rough for this, will have it clipped at least once with a sythe. Cutting all manner of worthless if not noxious plants in the blossom, will benefit the soil which their seeding would tax; it will render the eradication of weeds from your tillage a far easier task; and it will prevent your being a nuisance to your neighbors. I am confident that no one who has formed the habit of keeping down the weeds in his pasture will ever abandon it.

I think each pasture should have (though mine as yet, has not) a rude shed or other shelter whereto the cattle may resort in a storm or other inclemency. How much they shrink as well as suffer from one cold pelting rain, few fully realize; but I am sure that "the merciful man" who has the Scripture says, "is merciful to his beast," finds his humanity a good paying investment. I doubt that the rule would fail even in Texas; but I am contemplating civilized husbandry, not the rude conditions of tropical semi-barbarism. If only by means of stakes and straw, give cattle a chance to keep dry and warm when they must otherwise shiver through a rainy, windy day and night on the cold, wet ground, and I am sure they will pay for it

In confining a head of cattle to such narrow limits, I do not intend that they shall be stinted on what grows there. On the contrary, I expect them to be fed on Winter Rye, on Cut Grass, on Sowed Corn, Sorghum, Stalks, Roots, etc., etc., as each shall be in season. With a good mower, it is a light hour's work before breakfast to cut and cart to a dozen or twenty head as much grass or corn as they will eat during the day. But let that point stand over for the present.

TESTING THE SOUNDNESS OF GROWING TIMBER.

Large trees of valuable timber are frequently unsound, either hollow, "doxy," or full of cracks at the butt end, even when the external appearance indicates a good condition of the interior or heart. This is particularly the case with white oak timber. Large and valuable trees have frequently been purchased at an exorbitant price for some special purpose. But when the woodman's ax had made a kerf half-way to the middle of the butt, the interior was found to be hollow or doxy, rendering the timber wholly worthless for the purposes intended.

In order to determine whether the heart of a tree is defective, without cutting into it with an ax, the most expeditious way is to bore into the butt say one foot from the surface of the ground, with a 2 inch auger, drawing out the chips frequently for examination. In case the trees is of so large dimensions that the heart can not be reached with an auger of ordinary length, an iron rod one or more feet long may be attached, either by welding, or by mean of a sockt made in the rod to fit the shank of the auger. An auger hole near the ground will not injure a tree for timber, except in case it is to be employed for sleigh runners or for ship building.

Men who are familiar with the appearance of the bark of the butt end of many kinds of timber can frequently determine, without testing, whether the tree is defective at the heart. Still, this can not always be done in a reliable manner, since, when the defect is but small, the bark will not indicate it by any peculiarity of appearance.

NEVER PLOW WET SOIL.

We have often urged the attention of the Farmers to this subject, as one of great importance. Any traveler among our farming districts can see large tracts of land that have been plowed when wet and unfit to be worked, by observing large heavy clods of earth, which, in the hot season, become like a heated brick burning all the roots of grain or other product near to it. Besides this evil, no seed can vegetate and grow well upon soil thus cultivated, nor can that soil give back as much nutrition as if plowed when in right condition, and upon a warm and sunny day when light and warmth can penetrate into the soil and thus greatly benefit it.

We are confident that farmers lose from *ten to forty per cent* of their crop by inattention to this matter. By a little care at the proper time to plow, by examining the soil and selecting good *sunny* days, the soil will send up its voice in a halo of dewdrop clouds that will wreathe the plowman with its approval of his good sense.

As with Farms so with Orchards, Vineyards, and Gardens. *No soil* should be worked when wet and soggy. If the soil continues wet long, drain it well and soon it will be in working order, but never attempt to plow, spade, or work it, unless in good condition.

Those who think our cultivated lands must grow poor as they grow old, will find food for reflection in the fact that not many years back the average yield of wheat per acre in England was about ten bushels—it is now over 30 bushels.—*Brains* accomplished it.

AMERICAN DAIRYMEN'S CONVENTION, UTICA

UTICA, N. Y., Jan. 13.—The Fifth Annual Convention of the American Dairymen's Association which has been in this city since yesterday morning, adjourned this afternoon. The annual address was delivered by Professor G. C. Caldwell, of Cornell University. Addresses were also made by Hon. Horatio Seymour, Hon. Stanton Gould, Professor J. Law, John M. Webb, of New York; J. B. Lyman, of the New York *Tribune*, Professor A. N. Prentiss, of Cornell University; Mr. Bartlett, of Ohio, and others. A prize of $100 was awarded L. B. Arnold, of Ithaca, for the best essay on cheese as an article of food. Hon. Horatio Seymour was re-elected President for the ensuing year. The Convention was large and enthusiastic.

[We give a Report of this Convention, to show the interest in these matters felt by the prominent men of New York.—ED. F.]

EARLY ROSE POTATOE—GREAT PRODUCT.

There can be no question but that the EARLY ROSE POTATOE is the EARLIEST, MOST PRODUCTIVE, and BEST POTATOE IN THE WORLD.

The *American Agriculturist* gives the following Report of the

GREATEST YIELD ON RECORD.

Cornelius Simon, of Bloom, Ohio, writes to the *American Agriculturist* as follows: "I took just one pound of Early Rose, (four tubers), and cut them in pieces (about 50), one eye to each piece, and put them in a box to sprout about the first of May. Transplanted the sprouts (about 260) between the first of June and the fourth of July, in a rich sandy soil, in rows two feet apart, putting one sprout every foot in the rows, and produced, by actual weight, 751 pounds of good and large potatoes. The largest potatoe weighed two lbs. and seven ounces. From the best hill I got six lbs four oz. From a piece of ground 16x18 feet, I dug 285 lbs.; at the rate of about 760 bushels per acre."

LARGE CROPS IN VERMONT.

At the winter meeting of the Windsor County, Vt., Agricultural Society the first premium on the best acre of corn was awarded to N. Harlow Hartland, 94½ bushels; 2d, to J. Paddleford, Hartland, 88⅜ bushels; to Mr. P. also for best wheat, 27 1-12th bushels; 3d, S. Taylor, 21½ bushels; O. Paul, Pomfret, best oats, 96½ bushels; 2d, J. Paddleford, 78½ bushels; best rye, S. Taylor, Hartland, 28 3-5 bushels; N. Humphrey, Hartland, best potatoes, 324 bushels; O. Whitman, Pomfret, best carrots, 36½ bushels on ten rods.

TO EXTERMINATE HEN LICE.

A very easy and sure remedy for exterminating vermin from hen-houses is to take from five to ten cents' worth of chloride of lime, which can be procured at any apothecary's store, and sprinkle it over the roosts and about the house where the lice are most likely to be found; or make a wash of it and wash the roosts. I have found one or two applications an effectual remedy. L. B.

Winchendon, Mass., Jan. 11, 1870.

POTATOES GROWING ON VINES.

I planted some Early Goodrich Potatoes on manure taken from the barn cellar, and raised nearly as many in number on the vines above the ground as in the "hill" below the surface. What was the cause? L.

Winchendon, Mass., Jan. 15, 1870.

OIL CAKE MEAL

THE BEST FEED KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal; and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent; Barley Meal, 13 per cent; Oat Meal, 16 per cent; Oil Cake Meal, 22 9-100 per cent. For life-sustaining properties to all stock are used to sudden changes of weather or over-driving it has no equal

For MILCH COWS it is particularly valuable, increasing the quantity of milk and improving its quality to a far greater extent than any food known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food; generally mixed with the mash of bran, slops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no food known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, greatly increases the cleanliness and evenness and glossiness of the hair

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($25 per ton,) it is the cheapest feed in market. It is now selling in New York at $42 per ton, gold; at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

TO THE PUBLIC!

THE

SAN FRANCISCO

PACKAGE EXPRESS COMPANY.

CAPITAL.....$100,000

IS ORGANIZED FOR THE PURPOSE OF CARRYING Passengers, Baggage, Packages, and Parcels between the different Railroad and Steamboat Lines, and delivering the same to any part of the City.

To our friends from the Country this system recommends itself for their consideration. They can give their checks, etc. to our Messengers on the Cars and boats and feel perfectly sure that all will be safely and promptly delivered, thus saving any trouble with Hackmen or Job Wagons.

The Street Cars run from all Depots to the different Hotels.

Fruit or other Freight consigned to our care will be promptly delivered, and Freight Bills paid

Mark Care of

"S. F. Package Express Company,"

Commissions for the purchase of goods in this City especially solicited, and articles forwarded as directed.

This Company commends itself to the General Public. The same system has been long in operation in Eastern Cities with great success.

Gardeners, Foremen, Etc.

Those who desire to secure good and reliable Gardeners, Orchardists, Vine-pruners, and Foremen upon their Farms, can be supplied from our Office by sending notice of such wants, and giving us the special duties they desire performed, the wages they will pay, and all the particulars of board, washing, etc.

It will be our purpose to send out no persons that are not fully qualified for the specific duties desired, or any man who is not of good character, nor shall we send out any man until, by a proper test, we know he is qualified in every respect.

Having long experience in this business and knowledge of what is wanted, we shall only give employment to the *Best Men*.

For our time, examinations, correspondence, etc., we shall expect a compensation that will repay us

Horticulture.

THE NEW TARIFF AND OUR NATIVE WINE-CULTURE.

The new Tariff, as proposed by the Committee of Ways and Means, is now before the House.—Our readers are undoubtedly acquainted with it, and we need not give a list of its details. Suffice it to say, that imported Brandies have been highly favored by reducing the duty on the article from $3,00 to $2,00 per gallon.

We cannot but wish that this bill may become a law. An article, that at present cannot be sufficiently replaced and the importation of which could never be suppressed by the most rigid measures, is entitled to receive a little symptom of acknowledgement at the House of our Representatives. The Committee has also not been very harsh with another favorite article, Champagne, for which the *Wine & Fruit Reporter* and the great party represented by that Journal, the lovers of good Wine, are duly thankful.

But we shall abstain from all comment upon this new Tariff so much the more willingly as, in all probability, this Tariff, when passed, will look so different from its present shape, that its own author would hardly recognize it.

We desire at this time to say something in favor of our native Vineculture, and we have been brought to the conclusion to do so just by this new Tariff.

Many of the leading daily papers say, that this Tariff has been made by protectionists. Alas! everybody else may have been protected—but our American Vinicultarists, who are entitled to the same protection as Coal, Iron and other merchandise, have been left out in the cold. A specific duty upon all kinds of Wines from the old country, is the greatest obstacle that could be interposed against the introduction of our new product—the native Wine—into the world's market.

Men who make laws should take no decisive steps, unless they have informed themselves thoroughly about the subject on which they are to make a law. Ignorance is more dangerous than ill-intention. To make good our assertion, we have to give a brief chapter on Oenology.

The art of making Wine does not consist in pressing the grapes, letting its juice ferment, filling it in bottles and offering it to consumers.—Just as we have metals combined from several natural products of that species, but offering in their composition a more useful whole than any single one of its constituents; thus the growth of a single Vineyard, the juice of several varieties grown on the same soil, will, with very few exceptions, never produce Wine fit for consumption or able to satisfy the taste of the consumer.

There are so many claims made on the Wine—it is desired to be cheap—of good, pure taste—it is not to be of too great an alcoholic strength, but by no means poor of body. How can the consuming public be satisfied? We will try to answer the question by reference to examples and facts

We have the Wine of Johannisberg, Rudesheim, and Tokay, in Germany and Hungary; we have Chateau Lafitte, Ch. Margaux and Romanee, in France,—products of a grapevine that, under exceptional conditions, with the particular aid of soil and careful treatment and, above all, during a period of centuries, has been brought to a wonderful perfection. But what part do these Wines play in the Wine market? They go into the hands of a few persons who are able to pay the high price of the article. For supplying the million (and that is the highest vocation of our native Vineculture) with a good, pleasant, pure and cheap Wine, we want something very different from merely filling the casks with the grapejuice of our Vineyards.

There are in Eastern Germany large tracts of land on the banks of the Elbe, Oder, Neisse and other rivers, planted with grapevines and yielding large incomes to their proprietors. The product itself finds no market under its original brand.—It is not a Wine that would be bought in its natural state by consumers, but it possesses certain qualities which make it a most valuable element in the Wine trade. Its liberal proportion of saccharine is converted into alcohol faster and more completely than that of the Rhine and Moselle Wines. Its taste, after fermentation, is therefore more acid, but it has more body, more vinous element than many Wines of the best districts on the Rhine. This, together with the low price, sustains a lively steady demand for the article from the trade. Blended with more delicate but weaker Wine, it covers the deficiencies of the latter, and appropriates the good qualities.

The same system of blending,—of combining on scientific principles and under the teachings of experience the growths of different Vineyards and of different departments—likewise exists in France. Even the Wines growing on the opposite sides of the Pyrenees, the Wines of Spain and France, are combined, and the compound represents one of the most important articles in the Wine market of the world. There have been vintages when the French vignerons had to call for aid from the proud Magyars, and the reputation of the French Claret had to be saved by the full-bodied Wines of Hungary. For this year the Wines of Southern France will be the doctor for many weak products of other departments.

Our American Winegrowers are now in great part, and will soon be without exception, alive to the importance of these considerations. Making a fair, sound, well-tasting and cheap beverage for the million from our native grapes, should be their principal aim. It offers the only way to introduce our Vinicultural products into the general market, and to make Viniculture in America a profitable business. To accomplish this purpose, our Viniculture needs the low-priced, pure and sound Wines of Europe. It wants an article for blending, which mitigates or masks the soily, foxy taste of most of our native Wines, to give them more suavity and smoothness in flavor, in short, to make them more palatable. It is the only way to offer a good, wholesome drink made from our own grapes, to the population of our country.

Therefore, if the new Tariff raises the duty of the low-priced White and Red Wines of France, and the Wines from the German Wine districts from 26 cents to 50 cents, it inflicts an injury on our native Vineculture. The latter has no other source for improving its products and making them marketable than the importation of the cheap but ripened and developed Wines from Europe. It is the only way to realize a steady benefit from the investment of labor and capital in the cultivation of our native grapes.

Prohibitive measures against the importation of such Wines means, stopping the life-blood of our native Wine production. As yet, it cannot exist without this important assistance.

VALUABLE PLANTS FOR SALE.

☞ Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and to so cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, to gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us. WARREN & CO.,
11 *Farmer* Office.

BOUND VOLUMES FARMER

☞ Volumes of the "California Farmer" for The last EIGHT YEARS, uniformly bound, can be had at the Farmer Office at $3 per Volume.

These Eight Volumes contain more useful matter touching the practical workings of Agriculture as adapted to California Culture than any Book or Books Extant, as they comprise hundreds of Experiments, Letters and Essays upon the Culture of Cotton, Rice, Coffee and Tobacco; Grapes, Strawberries, and all other Fruits, with the Culture of Hops, Castor Beans, Flax, Hemp, &c. and the Whole series of Essay of L. Prevost on Silk Culture, from early beginning.

This set of Volumes would be a Library of itself and invaluable to the Cultivator of the Soil.

Orders sent to Farmer Office will be promptly attended to

Advertising Abroad!

WE CALL THE SPECIAL ATTENTION OF ALL Manufacturers, Agricultural Men, Nurserymen, Booksellers, and others having interests connected with the PACIFIC COAST, that now is the time to secure the business of this region by wisely ADVERTISING WITH US.

The full effects of the completion of that Grandest of all HUMAN ENTERPRISES, the PACIFIC RAILROAD, must open a large and wonderfully increased business between the Eastern States and the Pacific Coast, and they who wisely ADVERTISE NOW, will be the FIRST TO SECURE IT, and when once secured, they can HOLD ON TO IT.

We therefore invite all those who have valuable IMPLEMENTS, MANUFACTURES, INVENTIONS, BOOKS, PAINTINGS, etc. to the Columns of the CALIFORNIA FARMER, that will give them a wider circulation than any other medium they can adopt

WARREN & CO., Eds. and Prop'rs.

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING ... .FEB. 24, 1870.

THE CALIFORNIA FARMER READING ROOM, AND MUSEUM OF NATURAL HISTORY.

220 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER OFFICE are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING:

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion, twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SAMPLE COPIES.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination hoping our paper will meet their approval and induce them to subscribe, and to ask their neighbors to subscribe also.

Send for Sample Papers and get up a club. Address

Editor's Chair,

WASHINGTON

We give the very fine Patriotic Poem on Washington, from the Volume of Poems of G. W. Carter, Esq.—a Volume that contains many gems, and from which we shall again select.

THE VINE AND WINE.

We give an article on the new Tariff from Wine Statistics of New York, and call the special attention of our Vine Growers and Wine Makers to it, and solicit their opinion of the questions there discussed. We think California can make good and pure wine without the aid of any foreign wines. What say our wine men?

ESSAYS OF HORACE GREELEY.

We know our Farmers will read with interest the letters of this eminent man and distinguished Editor of the *New York Tribune*, from which we copy.

MUSIC—LETTERS RECEIVED.

We have many Letters laying over from last week, but the Grand Musical Fever that has been upon our community has drawn us willing, because we could not resist if we would, to enjoy scenes that come only once like them in a lifetime.

These Letters shall soon all be attended to.

STOCK LETTER.

A valuable Letter from R. W. Scott, Esq., the well known stock breeder of Lexington, Kentucky, will appear next week.

JENNY DARE

Two interesting letters from our Correspondent shall have place soon.

FARMING.

Several letters on this subject will soon appear.

BOOKS, CATALOGUES, &c

Those received will be duly noticed next issue.

A MESSAGE BY A "COURIER" DOVE.

We recieved the following kind message from the *Chicago Courier* of Feb. 1st, and from its Dove like notes of good will we hail it with grateful recognition, the *Courier* thus speaks.

"The CALIFORNIA FARMER, Edited by Col. Warren, is published weekly in San Francisco, and like most of the literature of the Pacific Coast, it is of a superior standard. It has a peculiar interest on account of the great difference in the Agricultural and scientific properties of that section of the continent; and an excellent idea of the industrial status of the Great West may be obtained from its perusal

BOOKS RECEIVED.

We have a new Book on the disease of Sheep, by Henry Clok, Veterinary Surgeon, together with an Essay on "Cattle Epidemics."

This is a very remarkable book, giving the remedy for the various diseases which effect stock of various kinds. This Book is for sale by A Roman & Co.

"EARLY ROSE" SPROUTS.

A choice lot of Sprouts of the "Early Rose" Potatoe all ready for Planting

These SPROUTS are put up in packages of FIVE and TEN pounds each—Price, $2.50, and $5.00.

It is estimated that a five pound package will produce at least TEN SACKS of first quality of this most wonderful Potatoe

For Sale at the

FARMER OFFICE.

SEND US SAMPLES.

We desire to procure *Samples* of every variety of Grain, Grass, and every Cereal, as well as *Samples of New Products*, and for these we shall be ready to reciprocate in any way desired. We will pay for them, or bestow a full equivalent in some *new Seed or Plants* that may be desired.

THE GRAND MUSICAL FESTIVAL.

San Francisco, and in fact the citizens from all parts of the State, have shown their appreciation of Music by their attention at the Pavilion this week, in the gathering thousands that thronged that spacious and elegantly arranged building.

We have witnessed many musical gatherings, but we are free to say that when the shortness of time allowed for the preparation, and the varied material of which the mass of Vocalists and Musicians were organized, we do not believe so great a success was ever achieved before, and in despite of which "My Lord Cardinal," the *Sacramento Union* may say, or any fault finding Journal do to depreciate, the Grand Festival has reflected Honor and Credit upon all who have labored for the work, and it is to be hoped labored with a large pecuniary success for the noble Institution it has tried to save.

To the Director Herold, to the Teachers of our Schools, to Prof. Knowlton, to the several Bands and Orchestras, to Artists one and all, and to the glorious groups of Children, the "Hope of California," great praise and honor is due. The scene at the Pavilion was a grand one, and it is to be hoped some of our Photoscopic Artists have secured the Grand Picture in its glory, for it should be preserved.

The grand scene of the week was this day when the distinguished author of this great Benefit, Madame Camilla Urso, stood before the mass of living spirits, amid the waving of flags and kerchiefs, there receiving the plaudits of "Well Done" Noble Lady. That reception and welcome was worth a life labor, and we think she felt and appreciated it.

No words or expressions we can make, or description we could give, can adequately picture the fulness of that successful scene.

To-day it was announced there would be another day and to-morrow is to be a continuance, and we believe the children will have another day.

We shall endeavor to give a better and more full sketch when it shall have been completed and its results made known. We trust that the handsome sum of $50,000 may be realized for the Library.

A Grand Ball is announced to come off *to-morrow*, Friday evening, at the Pavilion, for the Benefit of Madame Camilla Urso. This should be a solid testimonial as a rewarding proof of a great appreciation of her great labors.

COMMON SENSE *vs.* IMIGRATION.

Some time since a Book was published under this title, the object was to induce our Legislature to establish a great Emigration Society, and give some ten or fifteen office seekers a good fat salary of $2000 to $4000 each, and have a reserved fund of $200,000 for aid to Emigrants in need, or a bounty to those that could be induced to come.

That plan by some means did not succeed, and another was started to give *one man* a Bounty Purse of $10,000, or $90 a head to bring out Emigrants—that plan was stillborn and sleeps. Now another Sensation Pamphlet is scattered broad cast in behalf of a grand plan to people our State with Emigrants from a foreign country, and $300,000 is asked for, and all the arguments pro and con are laid out with much sophistry to show the great and urgent need that California has of more population.

Were it not that our Legislators have just decided (by the action of one Wise Senator) to let the Insane Asylum remain in the charge of the Governor as before, we should begin to believe that the writers of these pamphlets were trying to prove themselves worthy a free pass to the Insane Asylum as patients, for no sane person can possibly see in the present depressed state of trade, and with more than Twenty or Forty thousand laborers out of employment, any need of more population i. e., of the laboring classes only, it would be madness to make an effort to this end, and we cannot believe any sane Legislator in this State would consent to listen to any such a Bill, only to present it in such a manner as to bring a proper ridicule upon its projectors.

There never has been a time when our State has had so many workmen out of employ, and the number is daily increasing, and any plan or bill established for the purpose of inducing an emigration of laborers now as proposed would entail upon every Legislator who should vote for it, a lasting regret to himself and a disgrace to his party, for our State is now suffering from an excess of laborers, by bringing over to our State the poor of other countries.

The City of San Francisco now contains one third of the population of the State, and pays one third of all the taxes, and to day we have nearly ten thousand persons that want employment. The City has too many business men and yields too few patrons to make business prosperous—our State needs more population—but the kind we is not more *laborers*. We want *Families with means*, we want consumers, of our produce—and we want capitalists who will build Manufactories and enlarge our industry. This is the kind of Emigration we need and these will come without help from societies.

Our State has to-day a thousand Agents gone abroad that are doing the work for us, the visitors that have been with us, the Products we have sent abroad, and the *Press* of the State that has spoken in thunder tones—these agents are still at work, daily, every hour and moment. Therefore it is to be hoped our LEGISLATORS will as wise men, as the Guardians of the true interest of our State, see our own people already here and out of employment fed *first*—before they give *pap* to hungry *office seekers*, and burden the State by them and their labors.

NATURAL HISTORY.

We desire specimens in Natural History Insects, Flies, Frogs, Toads, Snakes, Turtles, etc., preserved in spirits, or dried, and for these or any curiosity, will make due return. Send by Wells, Fargo and Co., to our Office.

THE PREVOST TRIBUTE.

"There shall the yew her sable branches spread
And mournful cypress rear her fringed head,
From thence shall thyme and myrtle send perfume,
And laurel evergreen o'ershade his tomb."

The name of "Louis Prevost" is now identified with the early history of our industrial pursuits, and in that of Silk Culture he stands as the Pioneer. His early efforts—his years of earnest labor, the sacrifices he made to awaken the attention of our people to the great interest that is now drawing the attention of other countries to this State—are well known.

His last great efforts were to establish a Silk Colony in Los Angeles County, and to that end he made great efforts, and had just established himself there, when, by reason of overwrought physical powers, added to his anxiety of mind—he was taken ill. This trial test was too much; his body yielded; he died, and his spirit was called Home to receive that reward for earnest labor which was not duly or properly appreciated here while living.

"Louis Prevost" has made his own name and fame by earnest labor and a self-sacrificing life for others' weal. His noble nature suffered much because he felt the efforts in the cause of his heart were not duly appreciated. "Prevost's Silk Manual" shows how much he has done, while the records of our State Agricultural and Mechanical Societies, and our District Societies, bear evidence to his constant devotion to the cause he had espoused.

Mr. Prevost was truly a martyr to his work and, like all martyrs, died as martyrs die—poor—leaving his family unprovided for; and recently the *Sheriff has sold the very Homestead* where his early hours and most earnest efforts were made—not for himself, but for the cause and State he loved.—This sad act we esteem a reproach to our people and our State, and the object of this notice is, not to write an "obituary" to the memory of the departed NOBLE MAN, but to announce that we hope the time has come when those that love good deeds, and appreciate worth, may join to do an act of justice to the *Memory* of "Louis Prevost"—to Redeem his Homestead and restore it to his Widow and family, and also to erect a suitable tablet to his memory where his ashes now so quietly rest.

The memory of Louis Prevost has remained too long, since his departure from us, without a due recognition. It is true that his friends have desired often that something should be done, but it awaited the moment of time when the electric spark of enthusiasm in the cause of Right should be touched with the Promethean fire; and it was left for a noble spirit from a distant foreign land to come and, with his mighty *bow*, strike the *chord* of human sympathy, and awaken us all to duty. It was left for the noble and generous "Ole Bull" to come and *begin* a work which, we trust, now being commenced, will be continued, and completed, and thus redeem what, to many, has always seemed a neglect of one who gave himself thus to an enterprise which must result in a complete success to our State.

The work of duty to which we have thus alluded has begun, and it is but an act of justice to "Ole Bull" to state why this highly-distinguished artist should be the happy means to so desirable an end.

Ole Bull had announced that he would give one of his Concerts at San Jose, and his confidential Agent and warm friend, J. W. Watson, Esq., was on his way to that place to make the necessary arrangements. It had been our good fortune to have been at Sacramento at the time of his Concerts there, and we were also on the same train with Mr. Watson, whose society we had happily enjoyed while in the society of this noble Norwegian. Mr. Watson was speaking to us of San Jose—its City, people, resources, etc., when he said to us, "Mr. Bull has a letter from his intimate friend 'Botta' to Mr. Provost, and he wishes to meet and greet him warmly, as his friend 'Botta' had desired." We shall never forget the expression of Mr. Watson when we announced to him the *death* of Mr. Prevost; and as we spoke of his merits, his misfortunes, and his death, the very sale of his Homestead—Mr. Watson replied, "What will Ole Bull say?" We then felt the propitious moment had come when the work of justice to the memory of Louis Prevost could be begun,—and we hinted to Mr. Watson our hopes, and had from him readily his confidence that the heart of Ole Bull would, like electricity, respond

On our return to this City we addressed a Letter to Ole Bull, with the facts in relation to Mr. Provost. That Letter he received on Sunday last, when he summoned his Son, his Agent Mr. Watson, and his happy Quartette around him and named the facts, then turning to his friend Mr. Watson, said, "I cannot wait to write now, but you go, take the Telegraph and respond to Col. Warren. Tell him, with all my heart, yes—'All right!'" We have that *electric message* ALL RIGHT, and we trust in God that in this noble work it will be "All Right" now.

It was our good fortune to be present at San Jose at the Concert given there—a most successful and flattering one to this Genius of the Bow—and we were unexpectedly called upon by Ole Bull to announce the noble offering which was to be made for the Tribute to Louis Provost; this duty we performed, and we simply recited the facts here stated and, at the request of Ole Bull, we desired that a suitable Committee should be raised to prepare a Subscription List, so that there could be an opportunity for all to subscribe, from $1 to $100, to this fund—the object being, to Redeem the Homestead first, then it is to be hoped there will be means to erect a suitable monument to the memory of this "Earliest of Pioneers" in this cause, and still leave a handsome sum for the Family besides.

The Concert of Ole Bull for this purpose will be given at San Jose, on Tuesday next, March 1st, when, we have no doubt, that the many friends of the martyred Prevost, in the pleasant and prosperous City of San Jose will, with their accustomed liberality, make a noble beginning to this Fund for Prevost which, we are confident, will have from the friends of Mr. Prevost, from this City and from other parts of the State, additional and generous sums, until at least TEN THOUSAND DOLLARS shall be received, and thus show that the sad words that, "*Republics* are always ungrateful," —will not apply to the *people* of California.

We learn with pleasure that Committees have been made at San Jose, and that they are actively at work—giving promise of a good result to the PREVOST TESTIMONIAL.

LETTER FROM PREVOST COMMITTEE.

SAN JOSE, February 24, 1870.

COL. WARREN:

DEAR SIR—On behalf of the Committee of Arrangements for the Ole Bull Concert for the benefit of the widow of the late Louis Provost, I have sent you 450 tickets thereto by Wells, Fargo & Co. From the interest you so generously expressed in behalf of the widow, at Mr. Bull's Concert on Monday evening, the Committee entertain no doubt that you will use your best efforts in trying to dispose of them. Of course we do not expect people to come from San Francisco here to attend the Concert, but we believe there are hundreds of generous men in San Francisco, who will be glad to avail themselves of the opportunity to contribute a small sum for the benefit of the impoverished widow of a great public benefactor, like Mr. Prevost, who spent the best years of his life in developing a source of untold wealth to the State, to the utter ruin of his private fortunes.

We shall issue 3,000 tickets, and if we are not deceived by appearances, will realize a handsome sum for the widow.

The Concert has been fixed for Tuesday evening next.

Yours respectfully,
WM. A. JANUARY

We give the above earnest Letter and hope a generous response to it here, even if the parties cannot attend themselves.

If they desire they can purchase and send to their friends, or a visit there will be a double pleasure at this season of the year, and we hope many warm hearts will gather to this Call of Humanity.

Subscription List at our Office, where Tickets can be had.

THE BLESSED RAINS.

Never have we known such a rapid change in the opinions, expressions, and feelings of our Farmers as a few days have made. A few days since and the newspapers were all heralding *drouth, loss of stock, famine*, ruin to Farmers etc., etc.,—when "Presto, Change," the clouds came and dropped their fatness upon the land, and to-day, from one end of the State to other, even while the rain is still pouring down in torrents, even before there has been time to effect a change to any extent. Yet the *drouth* is over, the number of cattle that died, have not been so great after all, and *famine* is no longer feared—but on the contrary no doubt of abundant crops.

But the end is not yet—for the rains will continue until we believe these croakers will raise the cry that the rains will rot all the grain, for the fact is we have a class among us that are never content without something to complain about.—"Earthquakes," "Tornadoes," "Drought," "Cholera," Small Pox, or some other evil to conjure up and they are content. But for once the late Blessed Rains have washed them out and we hope they have gone down stream never to return.

LIFE OF OLE BULL.

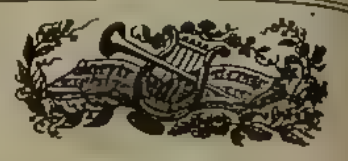
The Life of Ole Bull, with all the interesting and wonderful events which have marked his eventful career in his travels the world over, is in course of preparation by his friend Watson, who has been for some time gathering the material. It will be one of the most interesting Biographies ever published, full of incidents such as rarely falls to the lot of mortals. We feel confident from the ability of Mr. Watson, the History will be a remarkable one.

The present Company of Artists with Ole Bull we esteem a remarkably happy one. All Artists of a high order, all united by a common bond of generous sympathies and tastes. Thus harmonious in feeling, they cannot but send forth pleasant melodies. It is this that wins, and charms, and attracts the large audiences that now throng the Concerts of Ole Bull.

CALIFORNIA FARMER IN THE OLD STATES.

As we are constantly receiving orders for our Journal from the Old States, for the purpose of learning about the Resources of California, we feel disposed to aid in this enterprise, and to this end we say to all our friends in the old States that we will receive from *them their own currency* in payment for the FARMER. We offer this as a *Premium* to our distant friends who send us their names as subscribers.

We also invite Californians who wish to send the FARMER to the Old States, to call and subscribe to our NEW VOLUME and thus furnish them with scribers in the Old States we will receive Greenbacks at PAR. This is done to advance the best interest of our State, giving to each subscriber the Agents commission as Premium.



OLE BULL.

"Orpheus himself might hang his lyre
Upon the willows after this,
Nor henceforth impiously aspire
To lapse the sensor all in bliss,
For *they* who heard *his* thrilling strain
Would find all other music vain."

This most distinguished Melodist has been again with us after a lapse of sixteen years, & our citizens have been entertained by his melody—Oakland, Sacramento, San Jose, have enjoyed probably for the last time on this changing earth the strains of this wonderful man—and soon he leaves us to give other places of our State and other states his farewell greetings previous to his journey Home, to his old Norwegian land, home in melodies and strange histories. Ole Bull goes home to complete one of his heart enterprises—that of the NORWEGIAN NATIONAL MONUMENT, to be erected in 1872, being the ONE THOUSANDTH Anniversary of its Nationality, and for which this noble Norwegian has done much.

Who can look upon that sunny, genial face and not feel inspired, who can grasp his warm hand and not feel the hearts best blood move. The man that enjoyed the bosom friendship of Henry Clay, of Webster, Calhoun, and Benton, with other mighty minds, is worthy of homage, not mere worship or adulation merely, but the reverence and admiration of every generous mind and heart.

"Ole Bull" will soon leave us, and we shall not soon look on his like again, he has not labored merely for himself while here. Our charity fund have been generaly augumented and his last good work will be to labor for the PREVOST FUND, as named in another column, a deed that his heart is warmly engaged in, and one that we know will endear his name and memory to thousands of loving hearts.

Believing that our people are deeply interested in all that relates to this noble man, we have now placed before our readers a sketch of his beautiful Home in the far off country, and have added the noble and affectionate letter he addressed to his friend and present Agent, Mr. Watson, on the occasion of his visit to Ole Bull in his home in Norway, as is explained by the letter.

OLE BULL'S VILLA AT VALESTRAND, NEAR BERGEN

[From a Letter of J. J. Watson, Esq., describing his visit to Ole Bull]

After eighteen days travel, I find myself pleasantly located in one of the most charming spots on the globe. Here, away from the noise and bustle of the world, the great Violinist, surrounded by a few choice, congenial spirits, spends the sommer, after his laborious concert tour. "Valestrand" is a Village about eighteen miles from the city of Bergen, Norway; it is romantically situated in a beautiful valley, surrounded by the most picturesque, and at the same time grotesque, scenery; just such a spot as one would suppose Ole Bull to select for a "haven of rest" from the excitement incident to his profession. As the good people of the various towns and villages along the route from Christianssand to Bergen had been apprised of our proximity. Ole Bull was everywhere received with great respect, for the Norwegians are very proud of their gifted countryman. Upon our arrival at "Valestrand" guns were fired, flags hoisted, and a beautiful arch erected by the peasantry for him to pass under on he way to his ville. * * *

The evenings here are positively charming; the cool breeze comes gently through the mountains and one feels thankful at being removed from the heated, dusky city, and drinks in the bracing air with redoubled zest Ole Bull has a valuable collection of choice old violins of the greatest masters, one of which he has presented your correspondent; it is of most superior tone and beautiful workmanship. The maker's label upon the inside (scarcely distinguishable) reads as follows:

"Antonius and Hieronimus, Fr. Amati, Cremonen Andreæ, Fil. F. 1616." He has a splendid "Guarnerius," made in 1742; and two by Gaspar da Solo, one being beautifully enriched with arabesques, carved by the famous Benvenuto Cellini in 1500. The collection numbers some fifteen or twenty, and are all very valuable instruments. Ole Bull has also many beautiful presents that have been presented him by the nobility and various musical societies of Europe. One tea set of solid gold, presented to Russia; another of silver, presented by the London Philharmonic Society another from a Leipsic Musical Society, showing that, however severely he may be criticised by the German musicians, his weird genius is fully appreciated in Leipsic, one of the "head centers" of music in Germany. The splendid diamonds in Ole Bull's bow, which have attracted so much attention, were not the gift of a single individual, as erroneously supposed by many. The bow was made by Riechers, of Hanover; is about three times the ordinary weight and two inches longer than usual, the diamonds so beautifully set in are the gifts of friends at various times, the largest one in the end was the gift of the Duke of Devonshire, and was presented to Ole Bull under the following circumstances, as he related them to me. The Duke's sister, Lady Granville, then residing in Paris, was about paying him a visit at the "chateau," nine miles from London. Ole Bull and Rubini, the famous tenor, were invited to be present at the grand reception, when each contributed his skill to enliven the occasion. The duke, being, however, unfortunately quite deaf, could not enjoy many of the finest of Ole Bull's violin-playing and privately told him so, at the same time desiring him to remain after the company had dispersed and take dinner with him alone. After dinner he requested the artist to extemporize some fantasies on familiar opera airs and in order to hear and enjoy the performance

be tied a cord to the head of the violin, and taking the end in his mouth, seated himself opposite the musician; after playing for his gratification (or rather for his own as well, Ole Bull assured me he was scarcely conscious of the duke's presence) some considerable time, the duke arose, and after expressing his thanks for the great happiness he had thus been afforded him, and with the tears streaming down his cheeks, presented a magnificent dimond ring to the violinist, at the same time remarking that it was a family relic, and begging him to keep it as a "souvenir" of the great pleasure he had given him by his masterly performance. This was in 1836, thirty-two years ago.

It may not be generally known that Watson, the Agent of Ole Bull, is also a talented musician, a Violinist and a teacher of that magic Instrument, and a composer also, that he was at the head of the Central Normal Musical Conservatory, of N. Y. but became greatly attached to Ole Bull, and was invited to spend a season with his friend in Norway, and as a memento of that visit Ole Bull presented him with the rare Cremona of which the latter speaks. The following missive accompanied the gift.

Valestrand, Norway, August 10, 1868.

My Dear Friend Watson:—In handing to you the Antonius and Hieronymus Amati Violin I promised you in the United States—which promise you so kindly accepted in anticipation—you will not, I trust, be surprised if I entreat you to be careful of the rare Instrument comitted to your charge. You can safely trust your musical sentiments to this medium and to the genius of the brothers Amati, whose embodied spirits will console you in sorrow, temper you in joy, and bring blessed ideas and good tidings to all your friends and hearers.

With the best wishes, I am your sincere friend.

Ole Bull.

Ole Bull is now with us, he speaks to us three evenings this week as per public notices and lastly on Sunday evening, and then his final work in the noble effort for the Prevost fund at San Jose—and then—shall we let him go from us without a Testimonial that he is justly appreciated beyond the dollars we pay at the Concert, to receive *fice* for one in value? No! no! no! let our citizens bid him stay a little longer, at least until we can bind around his noble brow the chaplet of honor he has so nobly won, and we proclaimed him as he is the Great Maestro—The Angel of the Violin. This must be done to be just as California.

Thus when the hour comes we must part,
And quick our thoughts on memory tell.
Tears will unbidden from the eyelids start
As sadly we whisper the word "Farewell."

OLE BULL

Respectfully announces three

Grand Concerts!

—AT—

PLATT'S

SAN FRANCISCO,
ON THE EVENINGS OF

33-1 PROPRIETOR

NEW AGRICULTURAL BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz.: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY cuts in those parts needing such illustration; so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

THE FIELD AND GARDEN VEGETABLES OF AMERICA By Fearing Burr. Containing descriptions of all Vegetables, their different species and varieties grown in this country, with full illustrations of them.....Price $5 00

THE GARDEN VEGETABLES OF AMERICA. By Fearing Burr.....Price $2 50

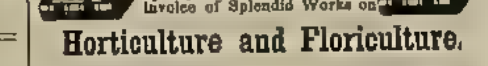
SPLENDID ENGLISH BOOKS.



WE HAVE JUST RECEIVED by Express from London a large invoice of Splendid Works on

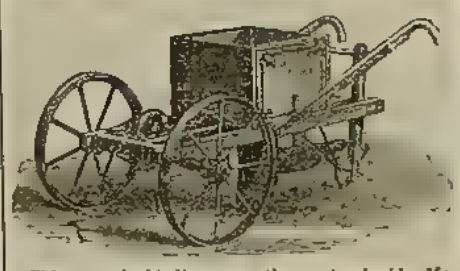
Horticulture and Floriculture.

The above are all New Works, or New Editions, of the most Valuable Works, and published in the best style.

For Sale at the Farmer Office.

32-6 WARREN & CO.

TRUE'S IMPROVED POTATO PLANTER.



This is, undoubtedly, one of the most valuable Machines adapted to Agricultural purposes ever introduced

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such sized slices as the farmer may prefer; drops those pieces with the most perfect regularity, and covers them perfectly, and does all this as fast as a horse can walk over any ground that can be plowed

No intelligent farmer can fail to see that an implement with which one man can, with the aid of a horse plant six acres of potatoes in a day, is of inestimable value; because the days in which PLANTING can properly be done are very few, while he has all SUMMER and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attending to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor-Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune with it.

Particulars and Catalogues can be had at our office.

WARREN & CO.,
320 Clay street, up stairs.

A Bargain!

Fine Homestead on the Mountains!!

A very fine COTTAGE HOME, in Eldorado County, containing Twenty Acres of Choice Land, pleasantly situated, and with pleasant surroundings.

A handsome Cottage House of Five Rooms on the first floor, and Two above, with every convenient arrangement for Family Comfort—Closets, Bath-room, Cellar under house, etc.

The outbuildings are, a good Carriage House, Wood shed, Chicken House, etc.

A Vineyard of Five Acres, Six and Eight-ye from which 1,500 Gallons of Wine have been Year.

A good Orchard of 500 Trees, Five to Seven Years Old, all Good Varieties of Fruit. The Eleven Acres balance of Land is best for Orchard, Vineyard, or Garden Cultivation.

There is any quantity of "Uncle Sam's" land, of Best Quality, that can be had at Settler's Prices.

The House is nicely furnished, and, to a person of taste, this place can be made a "little Paradise."

The House and Grounds will be sold a GREAT BARGAIN, if applied for immediately, and will sold for Less than the Cost of the Buildings!

Apply to Editor of Farmer.

Home Miscellany.

TO WASHINGTON.

BY G. W. CUTTER.

FATHER! when from this mimic scene
My eyes are turn'd to gaze on thee,
I fancy accents calm, serene,
Proclaiming, "Be ye ever free!"

Like the still voice the prophet heard
Within the whirlwind's angry roar;
So here thy lips, without a word,
Thunder of freedom evermore.

As o'er full many a closing eye,
The patriarch rear'd the healing sign;
So has the artist rear'd on high
That placid godlike brow of thine:

Where those who doubt of Freedom's reign,
And dream of bonds and felon sway
May kindle up their hopes again
Beneath thine eye's immortal ray:

Nor here alone. That face divine,
'Tis on the humblest cabin wall;
It floats above the foaming brine;
'Tis blazon'd in the Capitol.

Tis mingled with the glorious dyes
That form'd the standard of our sires;
And with that fragment of the skies
Shall stream aloft till time expires.

The first that to our eyes displays
In infancy the power of art,
The last on which we wish to gaze
When hope and vision's self depart.

Art thou not from the heaven above,
O'er us, thy children, gazing down,
As here we see thy face of love,
Without a cloud—without a frown?

Shade of the mightiest and the best,
Thou model and thou god of men!
Say, can the race thy presence bless'd—
Oh, can they e'er be slaves again?

No, Father! no! Thy name shall shield
On mountain pass, or ocean wave,
On smoking wreck, or gory field,
That freedom which thy valor gave.

HOW "MARBLES" ARE MADE

SOMETHING FOR THE BOYS.

The chief place of the manufacture of "marbles," those little round pieces of stone which contribute so largely to the enjoyment of "Young America," is at Oberstein, on the Nahe, in Germany, where there are large agate mills and quarries, the refuse of which is carefully turned to good paying account by being made into the small balls employed by experts to knuckle with, which are mostly sent to the American market. The substance used in Saxony is a hard, calcareous stone, which is first broken into blocks, nearly square, by blows with a hammer. These are thrown by the one hundred or two hundred into a small sort of mill, which is formed of a flat, stationary slab of stone, with a number of concentric furrows upon its face. A block of oak, or other hard wood, of the same diametric size, is placed over the small stones and partly resting upon them. This block or log is kept revolving while water flows upon the stone slab. In about fifteen minutes the stones are turned to spheres, and then, being fit for sale, are henceforth called "marbles." One establishment, containing only three of these rude mills, will turn out full sixty thousand "marbles" in each week. Agates are made into "marbles," at Oberstein, by first chipping the pieces nearly round with a hammer, handled by a skilful workman, and then wearing down the edges upon the surface of a large grindstone.

SUPERIOR PASTE.

When domestic paste is made, the material is frequently injured by scorching, or by the addition of too much water. Good paste, when spread on paper, will not strike though it like water, but will remain on the surface, like butter on a piece of bread. To make paste of a superior quality that will not spoil when kept in a cool place for several months, it is necessary to add dissolved alum as a preservative. When a few quarts are required, dissolve a desert spoonful of alum in two quarts of tepid water. Put the water in a tin pail that will hold six or eight quarts, as the flour of which the paste is made will expand greatly while it is boiling. As soon as the tepid water has cooled, stir in good rye or wheat flour, until the liquid has the consistency of cream.—See that every lump of flour is crushed, before placing the vessel over the fire. To prevent scorching the paste, place over the fire a dish-kettle or wash boiler, partly filled with water, and set the tin pail containing the material for paste in the water, permitting the bottom to rest on a few large nails or pebbles, to prevent excessive heat. Now add a tea-spoonful of powdered resin, a few cloves to flavor the paste, and let it cook until the paste has become as thick as "Graham mush," when it will last for a long time. If too thick, add cold water, and stir it thoroughly. Such paste will hold almost as well as glue.

A gentleman of New York proposes to one of the papers of that city, that a monument be built in Central Park, to the memory of the late George Peabody, and suggests that no contribution greater than one dollar shall be accepted from a single source, in order that all may have an opportunity to contribute, and that the proposed monument may be a truly popular and national offering.

NO MRS. GRUNDY IN CALIFORNIA.

Rev. Dr. A. L. Stone from California, while delivering Addresses in Boston, and describing California, is reported by the Boston *Mercantile Journal* as thus picturing the veritable "Mrs. Grundy."

All the pleasures of the famed El Dorado sink into insignificance when compared with the joy which the residents of California must experience at being exempted from the inquisitorial Mrs. Grundy. What are the luscious fruits of her vineyards, the golden particles of her streams, the giant trees of her forests, the grandeur of her scenery, the salubrity of her climate, when we think that beneath the skies of this happy State, Mrs. Grundy is unknown. If any less worthy personage than Dr. Stone had made this announcement we should have received the *cum grano salis*, but Dr. Stone is not only a man of veracity, but a gentleman of the finest powers of observation.—We feel certain he would have detected Mrs. Grundy during his four years' residence, under whatever disguise she might have adopted.

It scarcely seems possible that there can be on the face of this globe a community which is not, to some extent, under the subjugation of Mrs. Grundy. What freedom the good people must enjoy. No Mrs. Grundy to put a false construction upon the most innocent acts! No Mrs. Grundy to ascribe improper motives to good deeds!—No Mrs. Grundy to tattle and keep a community by the ears! No Mrs. Grundy to tear out the silver linings of even the clouds of domestic life; and in short, no Mrs. Grundy to scald reputations with her tongue while she pours out tea for her tattling coterie. The Pacific Railroad is worth all it cost, for it has brought us within eight days ride of the happy people who know not Mrs. Grundy.

"WOMANS' RIGHTS."

CARPENTERIA Cal., Feb. 18th 1870

EDITOR FARMER.

There is much said in these days relative to womans rights. Now let us consider a few of her rights—what they are. Her rights are many, but we have not time to write them all out—but one right she has that is real. It is the right to the best machinery there is in use for saving time and labor. Men have been prone to get machinery on the Farm for saving time, counting time as money but the wife must economise, for he has no money to spare for her. But of late he has begun to consider whatever helped his wife was real economy, and so the consequences are that woman is provided with Sewing Machines, and Washing Machines, and Wringers to help them along.

Now if it's "Womans Rrights" to have machines, it is her right to have the best in use, and J. M Horner knows how to make the best washing Machines. Yet as a woman, I have my thoughts in reference to his washing Machine, "The Economy," I think it should be three inches longer, so that the wringer could be fastened on the side rather than on the end. Then a person could rub soiled places at the end of the Machine without the trouble of taking the clothes into a tub.

As another improvement, I do not see why zinc could not be fixed inside to rub on, as several other Machines have, as the wooden board must necessaraly wear so fast as to make the Machine costly—as the price is dear in the first place—one needs a new one as often as once in nine or ten years.

Let woman speak and tell their wants, this is a womans right also. The rest I leave for other pens, this is as far as I shall go.

THE WEATHER.

The weather has been delightful here this winter, one week ago to-day we had a few showers come down as still and quiet as if preparing for more, Saturday it rained considerable through the day and night, and Sunday until about noon, when it cleared up. The last rain before was on Jan 5th. Farmers take courage, but the cry is still, more rain, and I trust it will come.

Respectfully yours. ROSA.

THE STRANGE COMPANION OF A SPRINGFIELD YOUTH.

There are in the lives of many of us singular experiences which we cannot account for to ourselves. One such experience persistently haunts at times a young man of this city—the sense of something at his side without noise or substance; something impalpable to touch or to the finer senses of sight, but felt through every nerve and in the secret strongholds of the mind itself, and visible to the inner vision.

This ghostly companion is half human, half undefined; its features, vague and varying as a mist or a cloud, are always deathlike and foreboding. It moves in even pace with his feet, stops as he stops, and repeats each motion of his. The inexplicable visitant comes unwarned, at an instant, and usually at night, as the subject of its calls wends solitarily home. The ghost, if ghost it be, does not choose the dim eshrouding dusk, but the most brilliant moonlight, for its communion; and sometime its appalling presence suddenly smites upon its both companion's consciousness in the midst of a crowded street. It has never entered a house, but will be at the gentleman's side as he turns the key, and the next instant—gone.—The object of this phantasmal devotion has no superstition in the matter: he utterly scorns the imbecile gropings of spiritualism; and is content to resign the mystery to a place among the many mental phenomena whose rules we cannot grasp. —*Springfield Republican.*

The late Henry Keep had purchased a lot in New York, and intended to erect thereon, at a cost of $1,000,000, a building for the permanent exhibition of works of art, believing that if he furnished the building, other wealthy men would fill it with pictures.

Twenty millions one hundred and fifty-seven thousand nine hundred and twenty-six passengers were carried by the London General Omnibus Company during the half-year ending July 1, 1869.

THE "CHRISTIAN UNION."

This Religious Journal, which has recently appeared under the Editorial charge of Rev. Henry Ward Beecher, is one of the largest and most talented Journals now published in the land, —having the best *corps* of writers in the Country.

We herewith give the Salutatory of Mr. Beecher, on assuming the Chair Editorial, which we esteem worthy the special reading of Editors.

The Editor thus speaks of the course the "*Christian Union*" will pursue under his leadership:

"It will actively enter into the discussion of all questions of public interest, which it will measure by the truths of the Christian Scriptures, and it will seek to exert upon them all a distinctively Christian influence. It will seek to interpret the Bible rather as a rule of life than as a Book of Doctrines. Yet, in so far as technical doctrines are introduced, it is but fair to say that the paper will be in sympathy with that system of truth widely known and recognized by the different terms, in various places, as Orthodox, or Evangelical, or Trinitarian.

"But, while holding and using as tests of life and rules of judgment the great truth of the Essential Divinity of the Lord Jesus Christ, together with the truths which in the Church Universal have been wont to flow from that Central Fact, we shall not regard a discussion of these, or of any great moral truths, as endangering their stability or the faith of Christian men. Religion is but the expression of man's deepest and noblest nature.—Although the development of religion has a relation to time and history, religion itself is a life, and not a philosophy, nor an organization. Its place is in the human soul. Its elements existed before a tenet was held or an act performed. Not until human nature perishes will religion cease.—It does not depend for existence upon historic testimony. Although illustrated by miracles, it may exist without miracles; although enforced by arguments, as the inevitable outworking of a divine and constitutional element in man. We have no fear, then, of the extinction of religion.—To-day, Reason employs history; to-morrow, Reason will wield philosophy; and the next day, Reason will employ physical science to unsettle men's faith. But this can reach nothing fundamental. Skepticism may assail the errors which have blended with religious life; may change its theories and its organic forms; but nothing but annihilation will destroy in man that supreme religious nature which will compel his reason to find out new beliefs, and his faith to renew its worship.

"We propose to take ground on the universal reality—the indestructible religious nature—which is as much a part of creation as the globe itself and its physical properties, and far more important.

"Believing that Christianity is the best exposition of that nature, its relations, duties, and aspirations, we embrace it.

"Believing that those who give to Christianity its most spiritual and inward interpretation, are at the same time the most in accord with nature, we side by sympathy with those, in all sects, who are most fervent, self-denying, disinterested and spiritual.

"Believing that, at heart, there is in common a divine life in all sects, we seek to be in sympathy with them in the things that are nearest to divine love and purity; and we shall assert in all other things—organizations, policies, philosophies—the liberty of all churches to have their own way according to the best light of an instructed conscience, and also we shall defend in all the utmost liberty of dissent; thus seeking for a *Unity of the spirit*, while we shall regard without alarm a *'diversity of manifestations.'*"

Santa Clara College, S. J.

SANTA CLARA, CAL.

Conducted by the fathers of the Society of Jesus.

THE NINETEENTH ANNUAL SESSION OF THIS INstitution will commence on THURSDAY August 19th, 1869

WHO MAKES SCRAP BOOKS.

'Tis said "In the making of Books there is no End," and we know there are many persons who are always interested in making SCRAP BOOKS, now to all such persons, we have some very important information which will benefit them.

It will be seen by our advertisement of OLD NEWSPAPERS FOR SALE that we can furnish just the *right material for Scrap Books*, for we have in this collection of Old Newspapers, a series of papers of 10 to 16 years and from every State in the Union, and also European papers; also select scientific and literary papers, Journals of all kinds. In these papers will be found much of the best Poetry of the age, also Stories, Anecdotes, Receipes &c., all very valuable, and these we shall offer at the low rate of $2 50 to $3, per hundred. Many of these are 12, 16 and 20 page pamphlets and magazines and other periodicals, those who want these collections will address

7 1 No. 205 Montgomery street, San Francisco

Miscellany.

CURIOSITY REWARDED.

A well known citizen of Hartford, Conn., a few days ago, had taken his seat in the afternoon train for Providence, when a small, weazen-faced, elderly man, having the appearance of a well-to-do farmer, came into the car looking for a seat.—The gentleman good naturedly made room for him by his side, and the old man looked him over from head to foot.

"Going to Providence?" he said at length.

"No, sir," the stranger answered, politely:—"I stop at Andover."

"I want to know! I belong out that way myself. Expect to stay long?"

"Only over night, sir."

A short pause.

"Did you calc'late to put up at the tavern?"

"No, sir. I expect to stop with Mr. Skinner."

"What, Job Skinner's? Deacon Job—lives in a little brown house on the old pike? Or mabbe it's his brother's? Was it Tim Skinner's—Squire Tim's—where you was going?"

"Yes," said the gentleman, smiling: "it was Squire Tim's."

"Dew tell! If you are goin' there to stop over night! Any connection of his'n?"

"No, sir!"

"Well, now, that's a curous. The old man ain't got into any trouble nor nothin', has he!" lowring his voice; "ain't going' to serve a writ onto him, be ye?"

"Oh no, nothing of the kind."

"Glad on't. No harm in askin', I s'pose. I reckon *Miss* Skinner's some connection of yourn?"

"No," said the gentleman. Then, seeing the amused expression on the face of two or three acquaintances in the neighboring seats, he added, in a confidential tone:

"I am going to see Squire Skinner's daughter."

"Law sakes!" said the old man, his face quivering with curiosity. "That's it, is it? I want to know! Goin' to see Miranday Skinner, be ye? Well, Miranday is a nice gal—kinder humbly, and long favored, but smart to work, they say, and I guess you're about right age for her, too. Kep' company together long?"

"I never saw her in my life, sir."

"How you talk! Somebody's 'gin her a recommend I s'pose, and you'r goin' clear out there to take a squint at her! Wa'al, I must say there's as likely gals in Andover as Miranday Skinner.—I've got a family of growed up daughters myself. Never was married afore, was ye? Don't see no weed on your hat."

"I have been married about fifteen years, sir, I have a wife and five children." And then, as the long restrained mirth of the listeners to this dialogue burst forth at the old man's open mouthed astonishment, he hastened to explain: "I am a Doctor, my friends, and Squire Skinner called at my office this morning to request my professional services for his sick daughter."

"Wa'al now!" And the old bore waddled off into the next car.

A War Story.

John C. Breckinridge and Humphrey Marshall met at Paris, Kentucky, the other day, and Mr Breckinridge told the following story of the war, which it is to be hoped his fat friend appreciated. When Gen. Pegram was preparing to march his troops into Kentucky, Marshall, who did not like poaching upon his preserves, ineffectually warned him not to come, and at last sent word that any troops which attempted to enter Kentucky would have to pass over his dead body. Pegram replied that it would be too much to expect that of his artillery, "but if he found the obstacle in his way he would immediately tunnel through."

The Colored Senator.

A Washington Correspondent of the *New York Tribune* says: That Mr. Revels, the Mississippi Senator elect, occupies, during the daily sessions of the Senate, a seat on the floor of the chamber. He is still an object of much curiosity to the crowd of strangers, but there is a noticeable difference in the deportment of Senators towards him. At first he was patronized, and, as the saying is, "made much of" but now they treat him pretty much the same as they would any other stranger, taking no unusal notice of his presence.

Three thousand tons of coal are used each day in the gas-works of London. The aggregate consumption per year is 10,000,000,000 cubic feet.

The golden crops of the Florida orange-growers are already gathering.

THE LAWS OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.

2. If subscribers wish their papers discontinued, publishers may continue to send them until all charges are paid.

3. If subscribers *neglect* or *refuse* to take their papers from the office or place to which they are sent, they are *held responsible* until they *settle* their bills and give notice to discontinue them.

4. If subscribers move to other places without informing the publisher, and the paper is sent to the former direction, they are held responsible.—Notice should always be given of removal.

5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is *prima facie* evidence of intentional fraud.

Postmasters would oblige by a strict fulfillment of the regulations requiring them to notify publishers, once in three months, of papers not taken from their office by subscribers.

Under the law of Congress, papers are not charged postage in the county in which they are published.

MERCHANTS'

GARGLING OIL

IS THE

BEST LINIMENT

IN THE WORLD

FOR MAN AND BEAST.

36 Years in Use.

Is good for Rheumatism, Chilblains, Corns, Whitlows, Caked Breasts, Sore Nipples, Cramps, Boils, Bites of Animals, Weakness of the Joints, Contractions of the Muscles, Burns and Scalds, Frost Bites, Painful Nervous Affections, Chapped Hands, Lame ack Pain in the Side, Swellings, Tumors, Tooth Ache, Old Sores, Hemorrhoids or Piles, Flesh wounds, Galls of all kinds.

Sprains, Bruises, Cracked Heels, Ring Bone, Poll evil, Wind galls, Callous, Spavin, Sweeney, Fistula, Sitfast, External Poisons, Scratches or Grease, Springhalt, Sand Cracks, Lameness, Strains, Founded Foot, Mange, Horn Distempers, Garget in Cows, Cracked Teats, Foot Rot in Sheep, and many other diseases incident to Man and Beast.

R. D. Taylor, of Concord, Ky., says the Gargling Oil cured a horse of his, injured while plowing by attempting to step over a stump, almost severing the thigh from the body; also that he has used it in his family for fifteen years, and is the best remedy for Cuts, Burns, Bruises, Frost Bites, Strains, Rheumatism, etc., he ever used.

From Crump & Bros., Lochrane Landing, Ohio, Nov. 29th, 1856—We are pleased with your medicines. It has been the means of curing a great number of different diseases upon persons, as also upon horses. We think it cures all you recommend it to do. We want you to send us the larger proportion of the variety for "Family Use," in small bottles.

From Dr. J. P. Terrell, Warren, Ind., March 3d, 1856—I am engaged in the practice of medicine, and find your Gargling Oil an extremely efficient remedy in all cases where an external application is indicated.

From Dr. G. B. Neal, Burris, Iowa, 1865—I have practiced medicine in this county seventy years, and cheerfully recommend your Gargling Oil as the best liniment in use.

From Dr. T. W. Ellis, Troupville, Ga., Jan. 6th, 1856—If I could receive both boxes of the Gargling Oil it would not be too much, as I think I could soon find sale for it all, the inquiry being frequent since it is supposed that I have it for

From Dr. Wm S McCall, Chamois, Mo., Nov. 9th, 1859—Your Gargling Oil is taking the shine off from all liniments of the day. If you desired them I could procure dozens of certificates from the best citizens of the county.

Messrs McLain & Bros., Wholesale Druggists, Wheeling, Va., say, under date of July 24th, 1866 that they can safely recommend the Gargling Oil for more diseases than it is recommended for.

From J. R. Fisher, Uniontown, Pa., June 31st, 1867—Your Gargling Oil is doing much better here than formerly, since its virtues have become known—and the bottles put up for Family Use, without Stain, are much sought for.

Extract of a letter from Hon. Nathan Lindsey, County Judge of Shelby county, Iowa, dated Harlan, April 18th, 1867. It is decidedly preferred to any other liniment sold in this section.

Extract of a letter from Samuel S. Hopp, dated Fallsburg, Ohio, July 17th, 1866—In June last, Henry Baffle had a yearling colt that had what was supposed to be Diphtheria, for more than ten days, so that it could not eat, and the throat swollen almost shut, and by the use of three or four applications of the dollar bottles, did the desired effect.

From A. G. Nial, Lewisville, Cochocton county, Iowa, March 1852—I have used your Gargling Oil for the scratches on my horse, and it cured it with the first application.

From Enos Mather, Middleport, N. Y., July 23d, 1856—I purchased a bottle of your Gargling Oil of your Agent, A. S. Baker, at Middleport, and as yet have used but half of it. I think it has given me more relief in a case of severe rheumatism of long standing, than anything I have ever used before.

Extract of a letter from J. O. Pratt, dated Quincy, Chautauque county, N. Y., August 12, 1854—I have been acquainted with your medicine, (Gargling Oil) for the last fourteen years. It has proved to be a sure cure for Foot Rot in Sheep, for which I have sold the last bottle, and have calls almost daily for more. Please forward as soon as convenient.

Always enquire for MERCHANTS' CELEBRATED GARGLING OIL, and take no other.

Retail price, $1 00, 50 cents, and 25 cents.

Shake well before using, and rub on thoroughly before the fire or some warm substance.

The Gargling Oil has been used as a liniment for thirty six years. All we ask is a fair TRIAL, but be sure and follow the directions.

Ask your nearest druggist or dealer in Patent Medicines for one of our Almanacs and Vade Mecums, and read what the people say about the Oil.

The Gargling Oil is for sale by all respectable dealers throughout the United States and other countries.

Our testimonials date from 1833 to 1869, and are unsolicited. Use the Gargling Oil and tell your neighbors what good it has done.

We deal fair and liberal with all and defy contradic

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attaches to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Comb, or Gum;

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H.&L.,

Is on the red cover of the packages.

Railroad Lands.

CENTRAL PACIFIC RAILROAD,
LAND DEPARTMENT.

Sacramento, March 1st, 1867.

The following statement is made for the information of those who desire to purchase Lands from said Company:

1st. Congress has granted to the Company, all the alternate sections of the public lands designated by odd numbers, within a distance of 20 miles on each side of the railroad;—excepting lands to which a pre-emption or homestead claim had attached prior to the 12th of September, 1862, and excepting lands reserved by the United States as mineral.

2d. The Company has no interest in even sections. To constitute a valid pre-emption or homestead claim within the above exception, the party must have resided on the land prior to September 12th, 1862, and continuously since that time. He must also on that day have been over twenty-one years of age and be the head of a family and have filed his claim in the United States Land Office within the time required by law. If he has not these requisites, or has neglected to file, he will have to buy of the Railroad Company.

3d. All persons who desire to purchase lands from the Railroad Company, including settlers, pre emptors, and other claimants, should make application to the Land Agent, B. B. Redding, at the Land Office of the Company, in Sacramento, either personally or by letter, describing the land by legal subdivisions. This application will be filed and the party will be allowed three months to complete the purchase, and during this time the land will not be sold to another without giving such applicant thirty days previous notice. If the purchase is not completed within three months, the land will be open to purchase by others.

4th. Persons who have valid pre-emption or homestead claims to any tract on an odd numbered section, can purchase the same from the Railroad Company at the Government price of $1.25 per acre in greenbacks, and upon the usual credit of five years if they so desire, by filing an abandonment of their claim in the U. S. Land Office, blanks for which will be furnished by the Land Agent of the Company. Such purchase from the Company has these advantages over a purchase from the Government: The party can leave the land if necessary—he can sell or mortgage it—he is saved the payment of lawyers' fees and expenses of witnesses to go to the Land Office to "prove up" his claim—he can get his title perfected in less time—and he can buy on credit at a low rate of interest.

5th. Actual occupants of lands belonging to the Company, will generally have a preference in the purchase at the regular price. No addition to the price is made where there are improvements on the land made by the settler. Where there are conflicting claimants who apply to purchase, an adjudication of their respective claims will be made by the Land Agent, upon due notice given to both parties.

6th. No lands are sold by the Company or the Government, until after they have been surveyed and the plats returned to the Land Office.

7th. The Company sells ordinary agricultural lands at $2 50 per acre, in gold (except sales to pre-emptors as above). Timber lands, lands in the immediate vicinity of the railroad, and tracts having special value above ordinary farming lands, will be sold at prices and on terms fixed by the Board of Directors.

8th. Persons desiring to do so can buy on a credit of five years by paying twenty per cent. of the price down, and interest annually in advance on the remainder at ten per cent. per annum. Thus a purchaser of one hundred and sixty acres at $2 50, which amounts to four hundred dollars, will pay twenty per cent., or eighty dollars, with interest on three hundred and twenty dollars, which is thirty-two dollars—in all one hundred and twelve dollars, paying each year thereafter thirty-two dollars interest, and the three hundred and twenty dollars at the end of five years. His three hundred and twenty dollars can be paid at any time within the five years, but not by installments, and the purchaser will then be immediately entitled to a deed.

9th. Applications to purchase lands can be filed in the Land Office of the Company at any time after the same have been surveyed by the Government; but no applications will be acted upon until three months after the maps have been filed in the United States Land Office. Occupants of the railroad lands who desire to purchase should therefore be prompt in filing their applications in the office of the Company within this time. Blank applications will be furnished to all who desire to purchase. No sales will be made except by legal subdivisions according to Government surveys. Purchasers can buy as large an amount of land as they may wish.

10th. No sales are made by the Company until the land is listed over to it by United States Land Officers. Purchasers are thus assured that the title they obtain is perfect.

B. B. REDDING,
Land Agent C. P. R. R. Co., Sacramento.

Corrected Weekly, by EDITOR FARMER.]

GRAIN AND FLOUR MARKET.

SAN FRANCISCO, Feb. 24

The Grain Market abroad still remains dull, and prices very low, It is quite evident by the quotations from Liverpool now for some time past as low as 9s., that shippers of wheat from this port must have experienced close work to escape a loss. Foreign houses have suffered losses, and several have gone into chancery by by reason of Grain speculations.

The effort to enhance the price of Grain by reason of the "want of rain" down South and *cattle perishing*, would not bear or *bull* the market. Letters from the best sources deny any great suffering, or loss of stock to any extent, except where there *was poor calculations*. We have ample testimony that there has been no great loss, and now the late rains have removed all doubt and fear of that harvests the present year.

Our advices give us news of the most cheering kind from all parts of the State, all telling of uncommon prosperity, and that the harvest of 1870 will be the largest and best ever known.

The wheat markets of New York and all the wheat states of the East are all overstocked and low. With us, we shall have a fresh supply from all the up river sections, and now that the rivers are rising we shall have our Market fully supplied and the price must rate low.

We have recently taken a hasty look through the surrounding Valley and over Alameda County, Santa Clara and San Jose regions, and on all hands properly plowed and planted, and particularly on Summer Fallowed lands the crops have never looked so promising.

We can say without fear of contradiction, that the late *dry spell* only affected those grain fields that were planted on the *scratch* in system, and our humble opinion is that all such Farmers ought and will be obliged to scratch hard for a living any where *that kind* of farming "dont pay" and this kind of Farmers are the men that bring the poor shrivelled grain to market.—The quicker our State is rid of this kind of farming the better and if the Farmers will not change *that* system, let them "sell out" and give place to better cultivators.

PREMIUMS.

THE EARLY ROSE POTATOE.

The wonderful celebrity which is now being attained by the unprecedented excellence of the "Early Rose Potatoe," its great productiveness beyond that of any other potatoe known, its early maturity (7, 8 and 9 weeks) surpassing all others, and its great superiority in *quality*, induces us to try to spread its culture as widely as possible.

We therefore will now offer to every *new subscribar* to the CALIFORNIA FARMER, from the commencement of our new Volume, Four poundsof the "Early Rose Potatoe," mailed to them *free of cost*, as a PREMIUM for 1870 This will give them seed for another year, equal to 200 to 300 lbs.

P. S. All new subscribers to our present Volume who kindly sent their names before this, if they will send us word they will use this seed, they shall have the parcel mailed to them free.

Shade Trees! Shade Trees!!

ORNAMENTAL & SHADE TREES

LARGE COLLECTION OF TREES.

EXTRA SIZE SHADE TREES

Elm and Ash Trees.

A splendid lot of very choice and large size ELM and ASH Trees, for PUBLIC SQUARES, and STREETS, will be offered in Lots to suit Purchasers.

Mulberry Trees.

Large size Mulberry Trees, White, Red, and MORUS MULTICAULIS, of all sizes, suitable for planting out as Shade or Ornamental Trees, and also as Fruit Bearing, or for feeding the Silk Worm

The Mulberry Tree makes a handsome Shade Tree, and is an Ornamental and Fruit Tree combined.

These Trees will be sold in lots to suit purchasers.

SAGE ORANGE TREES.

A few lots of Osage Orange Trees for setting out as Ornamental Trees. Also

SILK WORM EGGS

Of the PERKIN ANNUAL SPECIES, for sale.

The above will be sold on the best of terms.

P. S.—Orders addressed to A. P. Smith, will be promptly attended to.

Sample Trees can be seen at the FARMER OFFICE, where information of the quality of the Trees and the price can be had.

A. P. SMITH.

Of the well known SMITH'S GARDENS,

[Sacramento City, Cal.

COMMISSION SALES-ROOM —AND— Purchasing Agency.

Having had the experience of over thirty years to dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty five per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandize for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns, and which we have the exclusive sale for this Coast.

We also call attention to the

NEW GATE,

A most valuable invention, particularly to Farmers and Stock Raisers. County Rights for sale.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

The following are the kind of Goods imported or consigned to us for sale and which can be offered on the most favorable terms:

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them. with the utmost confidence In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown

FINEST MIXED LAWN GRASSES,
FINEST MIXED GRASSES FOR PERMANENT PASTURES.
FINEST MIXED GRASSES FOR SHEEP-WALKS
FINEST MIXED GRASSES FOR MEADOW-LAND.
PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR CHILI CLOVER,
KENTUCKY BLUE GRASS.
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental

TREE SEEDS.

TOBACCO SEED,
COTTON SEED,
COFFEE SEED,
TEA SEED.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

These will be ready in the months of November and December.

Collections can be forwarded by post at the following rates:

50 Packets choicest and best			$10 00
25	do	do do	5 00
12	do	do do	3 00
50 Packets Good Selected			6 00
25	do	do do	3 00
12	do	do do	1 50

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference

GYPSUM

(Sulphate of Lime.)

This well known but most wonderful fertilizer has not yet been practically introduced into our Agricultural interests or before the minds of the California cultivators, for the reason that there was no supply, and because it was hard to make them believe our lands needed manuring.

The time, however, has arrived when, by the admitted fact of the deterioration of our soils and the lessening of crops, something must be done to restore the soil and bring it into that state of fertility necessary to make it profitable to cultivate the soil.

Gypsum is a compound of Sulphuric Acid and Lime, and the object of this fertilizer is the fixation of Ammonia, thus making it the direct food of plants, either by supplying the Sulphate of Lime or by its decomposition, affording the Sulphuric Acid necessary to the due development of certain plants.

Sprengel's Analyses shows the quantity of Lime and Magnesia, Sulphuric and Phosphoric Acids to be very large in the following plants, and for which this fertilizer has no superior:

Wheat, Barley, Oats, Potatoes, Cabbage, Swedish Turnips, Clover, Beets, Turnips, and roots generally; thus ensuring to a certainty of great importance to the Farmers.

Liebig's Natural Laws of Husbandry gives conclusive proofs of its superiority as a fertilizer for Clover and Grasses, furnishing details of experiments made by distinguished men in various parts of Europe.

According to the experiments made by Boussingault, Gypsum is composed of *thirty-three parts* of Lime, *forty-three* of Sulphuric Acid, and *twenty-four* of the water of crystalization.

Gypsum is often called Plaster of Paris, but this is wrong—it only takes that name and character when it has been deprived of its water of crystalization by fire; there it becomes *Calcined Gypsum* or Plaster.

Gypsum for Dry Countries like California, will prove immensely valuable, as when used as a fertilizer in our hot and dry soil, its waters of crystalization are seperated by means of our hot sun, and go at once to benefit the plants, while the Acids and Sulphate of Lime is taken up by the soil, enriching it to a very great degree.

The undersigned is now prepared to furnish this valuable fertilizer by the quantity to all who wish to try its well attested virtues.

CHAS. J. JANSON,
222 BATTERY STREET.

STILL TRIUMPHANT!

THE COMMITTEE OF AWARDS OF OUR State and Mechanics' Fair, aware of the superior merits of the H & L AXLE GREASE over all others, have again awarded HUCKS & LAMBERT their first premium, their article having stood the test for over fifteen years. They are now prepared to sell their well known Axle Grease at as low a price as any other in the market, New York and Chicago not excepted

P. S.—To consumers—Don't trust to the real grease, ask for HUCKS & LAMBERT'S AXLE GREASE

THE FUNERAL OF GEORGE PEABODY.

The most interesting ceremonies which took place after the landing of the coffin from the steamer at Portland, Maine, and thence to Danvers (now the town of Peabody) have been heralded far and wide.

The Oration, which was delivered by the Hon. Robert C. Winthrop of Boston, is of that high order of merit deserving to be perpetuated, and we believe our readers will be glad to obtain it; we therefore published it in the last and the present issue—its length precluding it in one issue.

ORATION.

(*Concluded.*)

Gladstone, "taught us how a man may be the master of his fortune, and not its slave;" it is, as having discarded all considerations of caste, creed condition, nationality, in his world-wide philanthropy, regarding nothing human as alien to him; it is, as having deliberately stripped himself in his lifetime of the property he had so laboriously acquired; delighting as much in devising modes of bestowing his wealth as he had ever done in contriving plans for its increase and accumulation; literally throwing his bags like some adventurous aeronaut, who would mount higher and higher to the skies; and really exulting as he calculated, from time to time, how little of all his laborious earnings he had at last left for himself; it is, as having furnished this new and living and magnetic example, which can never be lost to history, never be lost to the interests of humanity, never fail to attract, inspire and stimulate the lovers of their fellow-men, as long as human wants and human wealth shall co-exist upon the earth.—It is in this way that our lamented friend has attained a pre-eminence among the benefactors of his age and race, like that of Washington among patriots, or that of Shakespeare or Milton among poets.

I do not altogether *forget* those Mæcenases of old, whom philosophers and poets have so delighted to extol. I do not forget the passing tribute of the great Roman orator to one of the publicans of his own period, as having displayed an incredible benignity in amassing a vast fortune, not "as the prey of avarice, but as the instrument of doing good." I do not forget the founders of the Royal Exchange in London, and of the noble hospital in Edinburgh; the princely merchant of Queen Elizabeth's day, or the "Jingling Geordie" of England's first King James. I do not forget how strikingly Edmund Burke foreshadowed our lamented friend, when he said of one of his own contemporaries, "His fortune is among the largest—a fortune which, wholly unencumbered as it is, without one single charge from luxury, vanity, or excess, sinks under the benevolence of its dispenser. This private benevolence, expanding itself into patriotism, renders his whole being the estate of the public, in which he has not reserved a *peculium* for himself, of profit, diversion, or relaxation." I do not forget the Baron de Montyon, of France, whose noble benefactions are annually distributed by the Imperial Academy, and whose portrait has been combined with that of our own Franklin on a medal commemorative of their kindred beneficence. I recall, too, the refrain of an ode to a late munificent English duke, on the erection of his statue at Belvoir Castle, which might well have been sung again when Story's statue of our friend was recently unveiled by the Prince of Wales—

"Oh, my brethren, what a glory
To the world is one good man!"

Nor do I fail to remember the long roll of benefactors, dead and living, of whom our own age and our own country, and our mother country—New England and Old England—may so justly boast. But no one imagines that either Caius or Curius, or Sir Thomas Gresham, or George Heriot, or Sir George Savile, or any Duke of Rutland, or Monthyon, or Franklin, or any of the later and larger benefactors of our own time or land, can ever vie in historic celebrity, as a practical philanthropist, with him whom we bury here to-day.

Think me not unmindful, my friends, that, for the manifestation of a true spirit of benevolence, two mites will suffice as well as untold millions—a cup of cold water as well as a treasure house of silver and gold. Think me not unmindful, either, of the grand and glorious results, for the welfare of mankind, which have been accomplished by purely moral or religious influences; by personal toil and trust, by the force of Christian character and example, by the exercise of some great gifts of intellect or eloquence, by simple self-devotion and self-sacrifice, without any employment what ever of pecuniary means;—by missionaries in the cause of Christ, by reformers of prisons and organizers of hospitals, by Sisters of Charity, by visitors of the poor, by champions of the oppressed; by such women as Elizabeth Fry and Florence Nightingale, and such men as John Howard and William Wilberforce; or, to go further back in history, by men like our own John Eliot, the early apostle to the Indians, or like that sainted Vincent de Paul, whose memory has been so justly honored in France for more than two centuries. But philanthropy of this sort, I need not say, stands on a somewhat different plane, and cannot fairly enter into this comparison.

It is enough to say of our lamented friend, as we have seen and known him of late, that in him were united—as rarely, if ever, before—the largest desire and the largest ability to do good; this his will was, at least, commensurate with his wealth; and that nothing but the limited extent of even the most considerable earthly estate prevented his enjoying the very antepast of celestial bliss:

"For when the power of imparting good
Is equal to the will, the human soul
Requires no other heaven."

And now, my friends, what wonder is it that all that was mortal of such a man has come back to us, to-day, with such a convoy and with such accompanying honors as well might have befitted some mighty conqueror, or some princely hero? Was he not, indeed, a conqueror? Was he not, indeed, a hero? Oh! it is not on the battle-field or on the blood-stained ocean alone that conquests are achieved and victories won. There are battles to be fought, there is a life-long warfare to be waged, by each one of us, in our own breasts, and against our own selfish natures—And what conflict is harder than that which awaits the accumulator of great wealth? Who can ever forget, or remember without a shudder, the emphatic testimony to the character of that conflict which was borne by our blessed Saviour,—who knew what was in man better than any man knows it for himself,—when He said, "How hardly shall they that have riches enter into the kingdom of God;" and when he bade that rich young man, "Sell all that he had and distribute to the poor, and then come and follow him!"

It would be doing grievous injustice to our lamented friend, were we to deny or conceal that there were elements in his character which made his own warfare, in this respect, a stern one. He was no stranger to the love of accumulation. He was no stranger to the passion for gaining, and saving, and hoarding. There were in his nature the germs, and more than the germs, of economy and even of parsimony; and sometimes they would sprout and spring up in spite of himself.—Nothing less strong than his own will, nothing less indomitable than his own courage, could have enabled him, by the grace of God, to strive successfully against that greedy, grudging, avaricious spirit, which so often besets the talent for acquisition. In a thousand little ways, you might perceive, to the last, how much within him he had overcome and vanquished. All the more glorious and signal was the victory! All the more deserved and appropriate are these trappings of triumph, with which his remains have been restored to us! You rob him of his richest laurel, you refuse him his brightest crown, when you attempt to cover up or disguise any of those innate tendencies, any of those acquired habits, any of those besetting temptations, against which he struggled so bravely and so triumphantly. Recount, if you please, every penurious or mercenary act of his earlier or later life, which friends have ever witnessed—if they have ever witnessed any—or which malice has ever whispered or hinted at,—and malice, we know, has not spared him in more ways than one,—and you have only added to his titles to be received and remembered as a hero and a conqueror.

As such a conqueror, then, you have received him from that majestic turreted iron-clad, which the gracious monarch of our motherland has deputed as her own messenger to bear him back to his home. As such a conqueror, you have canopied his funeral car with the flag of his country,—aye, with the flags of both his countries, between whom I pray God that his memory may ever be a pledge of mutual forbearance and affectionate regard. As such a conqueror, you mark the day and hour of his burial by minute-guns, and fire a farewell shot, it may be, as the clods of his native soil are heaped upon his breast.

We do not forget, however, amidst all this martial pomp, how eminently he was a man of peace; or how earnestly he desired, or how much he had done, to inculcate a spirit of peace, national and international. I may not attempt to enter here, to-day, into any consideration of the influence of his specific endowments, at home or abroad, American or English; but I may say in a single word, that I think History will be searched in vain for the record of any merely human acts, recent or remote, which have been more in harmony with that angelic chorus, which, just as the fleet with its sad freight had entered on its funeral voyage across the Atlantic, the whole Christian world was uniting to ring back again to the skies from which it was first heard;—any merely human acts, which, while, as I have said, they have waked a fresh and more fervent echo of "Glory to God in the highest," have done more to promote "Peace on earth and good will towards men."

Here, then, my friends, in the home of his infancy, where, seventy years ago, he attended the common village school, and served his first apprenticeship as a humble shop-boy;—here, where, seventeen years ago, his first public donation was made, accompanied by that memorable sentiment, "Education: a debt due from present to future generations;"—here, where the monuments and memorials of his affection and his munificence surround us on every side, and where he had chosen to deposit that unique and enamelled portrait of the Queen, that exquisite gold medal, the gift of his Country, that charming little autograph note from the Empress of France, that imperial photograph of the Pope, inscribed by his own hand, and whatever other tributes had been most precious to him in life;—here, where he has desired that his own remains should finally repose, near to the graves of his father and mother, enforcing that desire by these touching words, almost the last which he uttered, "Danvers,—Danvers—don't forget,"—here let us thank God for his transcendent example; and here let us resolve that it shall neither fail to be treasured up in our hearts, and sacredly transmitted to our children and our children's children, nor be wholly without an influence upon our own immediate lives. Let it never be said that the tomb and the trophies are remembered and cherished, but the example forgotten or neglected.

I may not longer detain you, my friends, from the sad ceremonies which remain to be performed by us; yet I cannot quite release you until I have alluded, in the simplest and briefest manner, to an incident of the last days, and almost the last hours, of this noble life, which has come to me from a source which cannot be questioned. While he was lying, seemingly unconscious, on his death-bed in London, at the house of his kind friend, Sir Curtis Lampson, and when all direct communication with him had been for a time suspended, it was mentioned aloud in his presence, in a manner and with a purpose to test his consciousness, that a highly-valued acquaintance had called to see him, but he took no notice of the remark. Not long afterwards it was stated in a tone loud enough for him to hear, that the Queen herself had sent a special telegram of inquiry and sympathy; but even that failed to arouse him. Once more, at no long interval, it was remarked that a faithful minister of the Gospel with whom he had once made a voyage to America, was at the door, and his attention was instantly attracted. That "good man," as he called him with his latest breath, was received by him, and prayed with him more than once. "It is a great mystery," he feebly observed, "but I shall know all soon;" while his repeated Amens gave audible and abundant evidence that those prayers were not lost upon his ear or upon his heart.—The friendships of earth could no longer soothe him. The highest honors of the world—the kind attentions of a Sovereign whom he knew how to respect, admire and love—could no longer satisfy him. The ambassador of Christ was the only visitor for that hour.

Thus, we may humbly hope, was at last explained and fulfilled for him, that mysterious saying of one of the ancient prophets of Israel, which he had heard many years before, as the text of a sermon by one whom he knew and valued; which had long lingered in his memory, and which, by some force of association or reflection, had again and again been recalled to his mind, and more than once, in my own hearing, been made the subject of his remark: "And it shall come to pass in that day, that the light shall not be clear nor dark; but it shall be one day which shall be known to the Lord, not day, nor night: but it shall come to pass, that at evening-time it shall be light."

At evening-time it was, indeed, light for him.—And who shall doubt, that when another morning shall break upon his brow, it shall be a morning without clouds—all light, and love, and joy—"for the glory of God shall lighten it, and the Lamb shall be the light thereof."

And so I bid farewell to thee, brave, honest, noble-hearted friend! The village of thy birth weeps, to day, for one who never caused her pain before. The "Flower of Essex" is gathered at thy grave. Massachusetts mourns thee as a son who has given new lustre to her historic page, and Maine, not unmindful of her joint inheritance in the earlier glories of the parent State, has opened her noblest harbor and draped her municipal halls with richest and saddest robes to do honor to thy remains. New England, from mountain-top to farthest cape, is in sympathy with the scene, and feels the fitness that the hallowed memories of "Leyden" and "Plymouth"—the refuge and the rock of her Pilgrim Fathers—should be associated with thy obsequies. This great and glorious Nation, in all its restored and vindicated union, partakes the pride of thy life and the sorrow of thy loss. In hundreds of schools of the desolated South, the children, even now, are chanting thy requiem and weaving chaplets around thy name. In hundreds of comfortable homes provided by thy bounty, the poor of the grandest city of the world, even now, are breathing blessings on thy memory. The proudest shrine of Old England has unlocked its consecrated vaults for thy repose. The bravest ship of a navy "whose march is o'er the mountain waves, whose home is on the deep," has borne thee as a conqueror to thy chosen rest; and, as it passed from isle to isle, and from sea to sea, in a circumnavigation almost as wide as thy own charity, has given new significance to the memorable saying of the great funeral orator of antiquity: "Of illustrious men, the whole earth is the sepulchre, and not only does the inscription upon columns in their own land point it out, but in that also which is not their own, there dwells with every one an unwritten memorial of the heart." And now, around thee, are assembled, not only surviving schoolmates and old companions of thy youth, and neighbors and friends of thy maturer years, but votaries of Science, ornaments of Literature, heads of Universities and Academies, foremost men of Commerce and the Arts, ministers of the Gospel, delegates from distant States and rulers of thy own State, all eager to unite in paying such homage to a career of grand but simple Beneficence, as neither rank, nor fortune, nor learning, nor genius, could ever have commanded. Chiefs of the Republic, representatives and more than representatives of Royalty, are not absent from thy bier. Nothing is wanting to give emphasis to thy example. Nothing is wanting to fill up the measure of thy fame. But what earthly honor—what accumulation of earthly honors—shall compare for a moment with the supreme hope and trust which we all humbly and devoutly cherish at this hour, that when the struggles and the victories, the pangs and pageants, of time shall be ended, and the great awards of eternity shall be made up, thou mayest be found among those who are "more than conquerors, through Him who loved us."

And so we bid thee farewell, brave, honest, noble-hearted Friend of Mankind!

EXPORT OF GRAIN.

There is one fact about the movement of grain which is not generally understood, says the New York *Commercial*. The Liverpool price controls the price here, and yet the total export of grain from this country is hardly worth mentioning beside the total crop. The estimated crop of corn and wheat in the United States for 1868 was 980,000,000 bushels. Other grains were 40,000,000 more. The total export for the year was but 18,000,000 bushels, less than 2 per cent of the crop. Of this almost 16,500,000 bushels were exported from this city. Of 85,000,000 bushels received at the five lake ports, only a little more than one fifth went abroad; the rest was shipped Eastward and dropped along the route as food for the people. These two consumed the whole thousand millions of grain in bread, in whiskey, or in other provisions. The Eastern States produce breadstuffs to the value of only eight or ten dollars to each of the population. The West produces from sixty to seventy dollars worth. And it is of this abundance that our wants are supplied. So, the question is answered. Most of the grain goes into the people's mouths, and a little of it across the seas.

RAINS SOUTH—PLOWING.

The rains have been quite copious at Santa Barbara, San Diego, and Los Angeles. Plows have been set to work merrily, and large tracts of land have been put in Summer fallow for another year's planting.

COATES BROTHERS' WOOL CIRCULAR.

PHILADELPHIA, February 1st., 1870.

The first part of last month was characterized by extreme dullness, but during the past few days there has been some activity, without, however, much advance in price—the principal movement being in the finer grade of fleeces. The Low and Medium wools, including Tub-washed, have been comparatively neglected, and consequently experienced but little improvement in value. There has been considerable accumulation of Pulled wool, especially of Merino and all short stock of the early pullings, which are now in large supply—manufacturers discriminating in favor of the long-stapled and clean wools.

Prices for all descriptions are at present so low that holders do not anticipate any further decline, and, as most of the small lots which have been pressed on the market are now closed out, it is probable that the trade will be characterized by more firmness, especially in the finer grades; but we cannot look for any advance until there is a more active demand for woolen fabrics.—Throughout the whole season, prices have been relatively much higher in the West than in the East, and lately several buyers have been in the market from different parts of the country to supply the home demand where the stocks are very light. Indeed, in many sections the wools have all been sold—which fact has caused many owners in different parts of the country to anticipate a general improvement in prices for all descriptions of wool, as they are often influenced in their views by what they see in their own immediate neighborhood, without realizing the fact that the general business of the country is depressed, and that their wants are merely local, or that the scarcity and high rates prevailing in some sections does not materially advance prices in the great centres of trade; nor does the scarcity and consequent high price of low combing wools affect the values of other descriptions which may be in excess of the demand.

If the spring trade for manufactured goods should open favorably, we may then look for a more active demand for wool, with perhaps some improvement in prices.

The sales for the month, of Domestic Fleece, Tub-washed and Pulled Wools, foot up about 3,372,700 lbs., within the range of 42 to 55 for Fleece, 48 to 56 for Tub-washed, and 35 to 42 for Pulled.

THE LOCAL PAPER.

What tells us so readily the standing of a town or city as the appearance of its paper? And its youth or its age can as well be determined by observing it as by a personal notice. The enterprise of its citizens is depicted by its advertisements, their liberality by the looks of the paper. Some papers show a good, solid, healthy foundation, with plethoric purses, and a well to do appearance generally. Others show a striving to contend with the grasping thousands around them, trying hard to wrench out an existence from the close-fisted community around them. An occasional meteoric display in its editorial columns, shows what it can do if it had the means; but it cannot continue in the expensive work until more support comes, which ought to be given readily. Take your home paper—it gives you more news than New York and other papers; it talks for you when other localities belie you; it stands up for your rights; you always have a companion in your home paper, and those who stand up for you should certainly be sustained. Your interests are kindred and equal, and you must rise and fall together. Therefore, it is to your interest to support your home paper, not grudgingly, but in a liberal spirit—as an agreeable duty, as an investment that will amply repay the expender."

LOSS OF TWO OCEAN STEAMERS.

Our community has been startled by the loss of one of our most splendid Ocean Steamers—the "Golden City,"—belonging to the Pacific Steamship Company, on the Panama route.

The Golden City was run ashore, in a fog, on the 22d of February, at 7 A. M. in the morning, at one of the desert points of Lower California,—the loss about ONE MILLION DOLLARS! The passengers were all safely landed, but had to travel 25 miles down the Coast in order to reach the "Colorado," another of the Steamers of the Pacific Mail Company, which brought the passengers to this City. In the travel of the passengers over the desert, *nine persons* are said to be missing.

The Oneida, one of our U. S. Corvettes, was run down, and One Hundred and Twenty souls were drowned!

Now that these disasters have commenced, we think many will follow, as these calamities generally go in a magnetic train.

Agriculture.

WHAT I KNOW OF FARMING.

BY HORACE GREELEY.

ESSAY NUMBER SEVEN.

TREES—WOOD LAND—FORESTS

I am not at all sentimental, much less spoony—regarding the destruction of trees. Descended from several generations of timber-cutters (for my paternal ancestors came to America in 1640) and myself engaged for three years in land clearing. I realize that trees exist for use rather than for ornament, and have no more scruples as to cutting timber in a forest than as to cutting grass in a meadow. Utility is the reason and end of all vegetable growth—of a hickory's no less than a cornstalk's. I have always considered "Woodman, spare that tree," just about the most mawkish bit of badly versified prose in our language, and never could guess how it should touch the sensibilities of any one. Understand, then, that I urge the planting of trees mainly because I believe it will pay, and the preservation, improvement, and extension, of forests, for precisely that reason.

Yet I am not insensible to the beauty and grace lent by woods, and groves, and clumps or rows of trees, to the landscape they diversify. I feel the force of Emerson's averment, that "Beauty is its own excuse for being," and know that a homestead embowered in, belted by, stately, graceful elms, maples, and evergreens, really worth more, will sell for more, than if it were naked field and meadow. I consider it one positive advantage (to balance many disadvantages) of our rocky, hilly, rugged Eastern country, that it will not probably, be so denuded of forests as the rich, facile prairies and swales of the Great Valley may be. Our winds are less piercing, our tornadoes less destructive, than those of the Great West. I doubt whether there is another equal area of the earth's surface whereon so many kinds of valuable trees grow spontaneously and rapidly, defying eradication, as throughout New England and on either slope of the Alleghanies; and this profusion of timber and foliage may well atone for, or may be fairly weighed against, many deficiencies and drawbacks. The Yankee, who has been accustomed to see trees spring up spontaneously wherever they were not kept down by ax, or plow, or scythe, and to cross running water every half mile of a Summer day's journey, may well be made homesick, by two thousand miles of naked, dusty, wind swept Plains, whereon he finds no water for fifty to a hundred miles, and knows it impossible to cut an ax-helve, much more an axle tree, in the course of a wearying journey. No Eastern farmer ever realized the blessedness of abundant and excellent wood and water until he had wandered far from his boyhood's home.

No one may yet be able fully to explain the interdependence of these two blessings: but the fact remains. All over "the Plains," there is evidence that trees grew and flourished where none are now found, and that springs and streams were then frequent and abiding where none now exist. A prominent citizen of Nevada, who explored southward from Austin to the Colorado, assured me that his party traveled for days in the bed of what had once been a considerable river, but in which it was evident that no water had flowed for years. And I have heard that, since the Mormons have planted trees over considerable sections of Utah, rains in Summer are no longer rare, and Salt Lake evinces, by a constant though moderate increase of her volume of waters, that the equilibrium of rain-fall with evaporation in the Great Basin has been fully restored—or rather, that the rain-fall is now taking the lead.

I have a firm faith that the great deserts of the Temperate and Torrid Zones will yet be reclaimed by irrigation and tree-planting. The bill which Congress did not pass, nor really consider, whereby it was proposed, some years since, to give a section of the woodless Public Lands remote from settlement to every one who, in a separate township, would plant and cherrish a quarter-section of choice forest-trees, ought to have been passed—with modifications, perhaps, but preserving the central idea. Had ten thousand quarter-sections, in so many different townships of the Plains, been thus planted to timber ten to twenty years ago, and protected from fire and devastation till now, the value of those Plains for settlement would have been nearly or quite doubled.

A capital mistake, it seems to me, is being made by some of the dairy farmers of our own State.—One who has a hundred acres of good soil, whereof twenty or thirty are wooded, cuts off his timber entirely, calculating that the additional grass that he may grow in its stead will pay for all the coal he needs for fuel, so that he will make a net gain of the time he has hitherto devoted each Winter to cutting and hauling wood. He does not consider how much his soil will lose in Summer moisture, how his springs and runnels will be dried up, nor how the sweep of harsh winds will be intensified, by baring his hill-tops and ravines to sun and breeze so utterly. In my deliberate judgment a farm of one hundred acres will yeild more feed with far greater uniformity of product from year to year, if twenty acres of its ridge-crests, ravine-sides, and rocky places, are thickly covered with timber, than if it be swept clean of trees and all devoted to grass. Hence, I insist that the farmer who sweeps off his wood and resolves to depend on coal for fuel, hoping to increase permanently the product of his dairy, makes a sad miscalculation.

Spain, Italy, and portions of France, are now suffering from the improvidence that devested their forests, leaving the future to take care of itself. I presume the great empires of antiquity suffered from the same folly, though to a much grater extent. The remains of now extinct races who formerly peopled and tilled the central valleys of this continent, and especially the Territory of Arizona, probably bear witness to a similar recklessness, which is paralleled by our fathers' and our own extermination of the magnificent forests of White Pine which, barely a century ago, covered so large a portion of the soil of our Northern States. Vermont sold White Pine abundantly to England through Canada within my days she is now supplying her own wants from Canada at a cost of not less than five times the price she sold for; and she will be paying still higher rates before the close of this century. I entreat our farmers not to preserve every tree, good, bad, or indifferent that may happen to be growing on their lands—but, outside of the limited districts wherein the primitive forest must still be cut away in order that land may be obtained for cultivation, to plant and rear at least two better trees for every one they may be impelled to cut down. How this may, in the average, be most judiciously done, I will try to indicate in my next.

THE RAMIE, THE GREAT SOUTHERN TEXTILE PLANT.

The European demand for this new fibre, is large and rapidly increasing; it is at this time greatly in advance of the supply. Planters and Farmers cannot grow any other crop so sure of a profitable return as the Ramie. It is a hardy and vigorous growing plant, and is not injured by long rains or droughts; the cotton worm or frost do not destroy it. The harvesting of Ramie, is not attended with that danger from rain and other causes which in delaying the gathering of Cotton, often destroys at least one half the crop. The fibre of the Ramie is contained in the centre of the stem, and surrounded by a gummy bark, which thoroughly protects it from insects, also from long continued wet or dry weather. The fibre is beautifully white, soft and glossy, closely resembling and almost outrivaling silk in the strength and brilliance of its appearance. Farmers and Planters will always find a ready market, as the demand cannot be supplied from the East Indies and China. The market quotations at this time is ten cents, specie, per pound, in the rough state.

"The numerous successful experiments of Silk, Woolen, Linen and Cotton manufacturers in the United States, and still more extensively in Europe has created a demand for this new and valuable staple, far beyond the present production or means of supply. It is discovered that the Ramie grown in the United States has a very long and exceedingly fine fibre, far superior to that grown in its native country, and that the yield per acre is greater. In any of the Southern Cotton States, Ramie can be harvested at least three times a year, and each harvest or cutting will produce between nine and twelve hundred pounds, making an average annual crop of about three thousand pounds of crude, unprepared fibre, worth at present, in Europe, ten cents—specie—per pound. In preparing the fibre for manufacturing purposes it looses about one half, increasing it in value to sixty-five cents per pound. Thus it is apparent that Ramie requiring comparitively little tillage to produce such magnificent results in the most profitable crop that the planter can cultivate.—The fibre when prepared for the spinner, is beautifully white, soft and glossy, closely resembling floss silk in appearance, it is much stronger than the best flax, and readily receives the most delicate or difficult dyes without injury to its strength or lustre."—*New York Journal of Commerce.*

"We have been just shown a piece of fabric having all the appearances of very fine silk, it was made from the fibre of the China Ramie Plant, and by all accounts there is no doubt that it will rank with the Cotton Plant, if it does not even excel that valuable product. A great point in favor of the Ramie over Cotton growing is that the Ramie requires small capital and little labour in comparison to the Cotton. It is also free from the ravages of the Cotton worm. From experiments made during the last two or three years in the Southern States of America, it appears that that climate and soil is even better adapted than China for the production of this staple, as the fibre of the Ramie grown there is much longer and finer than that which comes from China, and our manufacturers will be glad to learn that great preparations are being made for its production in America."—*London Times*, August, 1869.

"Ramie, a wonderful textile plant, whose fibre is superior to the best Sea Island Cotton or Irish Hemp. It was first introduced into this country from Java, in 1846, and from the beauty and strength of its fibre it attracted much attention from the Cotton and Linen Manufacturers, and from that time every inducement was held out to the growers of Ramie in the East Indies. Large quantities are now received from that source, and the goods manufactured from it excels the finest linen fabrics, in strength, finish and beauty; it takes the most difficult dyes and almost outrivals silk in its beautiful lustre. We have just seen a sample of it from the United States. The fibre is more glossy, finer and longer than that grown in the East. The climate and soil of the Southern Cotton States are well adapted to the raising of this Plant, and from its rapid growth, from three to four crops can be cut each season, making it a much more profitable crop to grow than either Cotton or Sugar, it is now quoted in the Market at from £60 to £80 per ton. We shall not be surprised if Ramie in a few years dethroned King Cotton from his Imperial throne in America."—From the *Liverpool Trade Reporter*, Sept., 1869.

ONE THOUSAND PLANTS.

Those who are planting Gardens, and wish *collections* of choice plants, can buy them in quantities at a very low rate, if they visit the *Gardens Corner of Mason and Pacific Street*, in this city, or address EDITOR FARMER.

Farms and Ranches,

—AND—

LANDED ESTATES FOR SALE.

Now that we have so many new settlers of the better class coming to our State, those who have

FARMS, IMPROVED HOMESTEADS,

LANDS, RANCHES, &C.,

Should now make them known extensively, and in no way can they do it more effectually than by

ADVERTISING IN THE FARMER,

As we are now sending to thousands of readers in the other States, as well as at Home, our JOURNAL, the advertisements appearing in our columns will be read in all the principal Merchant's Exchanges in the Eastern States and Europe, as well in the best private Reading Rooms and Libraries of the United States.

Advertisers will be wise that consult our columns.

☞ One thing is certain.—No disreputable Advertisements can appear in our Journal. 33 1

FOREMAN'S PLACE WANTED

A German Gardener and Orchardist wants a place where he can find steady employment. The advertiser fully understands Orchard and Vineyard culture, he is thoroughly acquainted with the Pruning of Orchards and Vineyards, and can give the very best of recommendations of his qualifications for such duties. He desires a permanent place where he can by his labor make his work tell. Inquire at this Office. 17

SAN FRANCISCO PACKAGE EXPRESS CO.

This Company is now located at 313 Montgomery street, in the very centre of our business thoroughfares, and are ready and prompt in the delivery of Trunks, Packages, Parcels, etc., on all the routes of Steamer, Railroad, etc., and prices very moderate.

Miscellaneous.

OIL CAKE MEAL

THE BEST FEED KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal, and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent; Barley Meal, 13 per cent; Oat Meal, 18 per cent; Oil Cake Meal, 23 9-100 per cent. For life-sustaining properties to all stock and adapted to sudden changes of weather or over-driving! Is no equal.

For MILCH COWS it is particularly valuable, increasing the quantity of milk and preserving its quality to a far greater extent than any feed known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food; generally mixed with the mash of bran, slops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other food and no food known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair.

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($25 per ton,) it is the cheapest feed in market. It is now selling in New York at $42 per ton, gold, at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

THE

SAN FRANCISCO

PACKAGE EXPRESS COMPANY.

CAPITAL.....$100,000

IS ORGANIZED FOR THE PURPOSE OF CARRYing Passengers, Baggage, Packages, and Parcels to the different Railroad and Steamboat Lines, and delivering the same to any part of the City.

To our friends from the Country this system presents itself for their consideration. They can give us their checks, etc. to our Messengers on the Cars and Boats, and feel perfectly sure that all will be safely and promptly delivered, thus saving any trouble with Hackmen or Job Wagons.

The Street Cars run from all Depots to the different Hotels.

Fruit or other Freight consigned to our care will be promptly delivered, and Freight Bills paid.

Mark Care of

"S. F. Package Express Company,"

Commissions for the purchase of goods in this City especially solicited, and articles forwarded as directed.

This Company commends itself to the General Public. The same system has been long in operation in Eastern Cities with great success.

Gardeners, Foremen, Etc.

Those who desire to secure good and reliable Gardeners, Orchardists, Vine-pruners, and Foremen upon Farms, can be supplied from our Office by reciting notice of such wants, and giving us the special nature they desire performed, the wages they will pay, and the particulars of board, washing, etc.

It will be our purpose to send out no person that is not fully qualified for the specific duties desired, or any man who is not of good character, nor shall we send out any man until, by a proper test, we know he is qualified in every respect.

Having long experience in this business and knowledge of what is wanted, we shall only give employment to the *Best Men.*

For our time, examinations, correspondence, etc., we shall expect a compensation that will repay us.

Horticulture.

FLOWER GARDENING.

PLANTS FOR SPECIAL PURPOSES.

Ornamental Leaved Plants.—Plants with ornamental leaves are becoming popular in all parts of the world. They produce a very fine effect when grown in a group of half a dozen or more together. For usefulness in this respect, I know of nothing better than the Cannas, Ricinus, Amaranthus, Perilla Nankinensis & the Striped-leaved Japanese Corn. The seed of all these but the Cannas may be sown in the open ground, and will produce a splendid effect the first season; or they may be transplanted from the hot-bed. The Cannas does best started in heat; but I can furnish strong roots. The Ricinus is the tallest of those named—from four to ten feet high—and should occupy the centre of the group. In fact, this is the best for common use.

Climbing Plants.—These are particularly valuable for covering buildings, fences, etc., and for making beautiful what but for them would be very unsightly. For the convenience of customers I have placed all the climbing plants in a seperate department. Nothing will given more satisfaction than the Annual Climbers, when properly cared for and used in the right place.

Ribbon Beds.—This is a very pretty style of planting, and very popular in Europe. We very seldom see any attempt at anything of the kind in America, and the directions in most of the books are so elaborate they are really discouraging. I will try to give a few simple directions that I hope will induce some of my readers to try this very pretty method. The plan is to set plants of the same height and color in a row, several rows forming the bed. In making these ribbon beds, (and the name, perhaps it would be well to say, is given on account of the arrangement of the colors like those in ribbons,) it is only necessary to be careful to set plants of the proper height, and those that will keep in flower a long time, because when one variety is over flowering the effect is spoiled. A very pretty ribbon bed is made by taking different colors of the same flower, like Phlox Drummondii, Portulaca, Stocks or Asters. With little care in studying the descriptions, and a little experience, this work will become easy and pleasant. Those who make the trial for the first time will do well to commence with the different colors of Phlox Drummondii.

Making a Lawn.—In preparing the soil for a lawn the work should be well done as it is to be permanent, and an error in this respect cannot be corrected. Mellow the soil thoroughly and deep, and make the surface perfectly smooth. Sow about four bushels of seed to the acre, and do this either in the fall, or as early as the ground can be got ready in the spring, so that the seed may have the benefit of the spring rains to aid in its germination. A pound or two of white Clover to the acre is generally used, and the same quantity of Sweet Vernal Grass should never be omitted, as it is as fragrant as Mignonette. By about the first of July, if the weather is not too dry, the lawn will assume a fine green, and in a short time after will require cutting. It will be strange if a great array of weeds do not appear with the grass, but do not take it for granted that these weeds came from the grass seed sent you, as many have done because if you had not sown any grass seed the weeds would have been just as abundant. The Farmer who finds the weeds among his corn and potatoes never imagines that he planted them with his seed. As soon as the grass and weeds get high enough to be cut with a sythe or lawn mower, cut close and evenly, and repeat this operation as often as possible. The weeds will soon disappear. A few, perhaps, it may be necessary to remove by hand, but this is not often necessary.

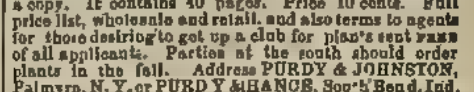
VALUABLE PLANTS FOR SALE.

☞ Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and to so cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, to gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us. WARREN & CO.,
tf Farmer Office.



BOUND VOLUMES FARMER

☞ Volumes of the "California Farmer" for The last EIGHT YEARS, uniformly bound, can be had at the Farmer Office at $3 per Volume.

These Eight Volumes contain more useful matter touching the practical workings of Agriculture as adapted to California Culture than any Book or Books Extant, as they comprise hundreds of Experiments, Letters and Essays upon the Culture of Cotton, Rice, Coffee and Tobacco; Grapes, Strawberries, and all other Fruits, with the Culture of Hops, Castor Beans, Flax, Hemp, &c. and the Whole series of Essays of L. Prevost on Silk Culture, from early beginning.

This set of Volumes would be a Library of itself and invaluable to the Cultivator of the Soil.

Orders sent to Farmer Office will be promptly attended to

Advertising Abroad!

WE CALL THE SPECIAL ATTENTION OF ALL Manufacturers, Agricultural Men, Nurserymen, Booksellers, and others having interests connected with the PACIFIC COAST, that now is the time to secure the business of this region by wisely ADVERTISING WITH US.

The full effects of the completion of that Grandest of all HUMAN ENTERPRISES, the PACIFIC RAILROAD, must open a large and wonderfully increased business between the Eastern States and the Pacific Coast, and they who wisely ADVERTISE NOW, will be the FIRST TO SECURE IT, and when once secured, they can HOLD ON TO IT.

We therefore invite all those who have valuable IMPLEMENTS, MANUFACTURES, INVENTIONS, BOOKS, PAINTINGS, etc. to the Columns of the CALIFORNIA FARMER, that will give them a wider circulation than any other medium they can adopt.

WARREN & CO., Eds. and Prop's.

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING MARCH, 3d., 1870.

THE CALIFORNIA FARMER READING ROOM, AND MUSEUM OF NATURAL HISTORY.

320 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER OFFICE are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING:

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion, twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SAMPLE COPIES.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination hoping our paper will meet their approval and induce them to subscribe, and to ask their neighbors to subscribe also.

Send for Sample Papers and get up a club. Address

ANNUAL OF PRAIRIE FARMER.

We have the *Annual Register & Advertiser*, of this most admirable and we may say venerable Agricultural Journal—one of the oldest and best publications in the United States.

MAGAZINE EXCELSIOR.

We have a copy of the Magazine bearing this title, which we shall hereafter report upon.

FOR EVERY MAN.

This is the title of a Book, which teaches Man in every relation of life "How to get Rich"—this is the vim of the Book—it is a work of which we shall again speak.

TARANTULA

We have recieved from the Post Master of Milpitas, a fine specimen of the monster Spider—a Tarantula, a dried specimen for our Museum, for which we return thanks.

PREVOST PHOTOGRAPH.

We acknowledge most gratefully, the fine Photograph likeness of our deceased friend Louis Prevost, and also another picture of Mr. Prevost and Neuman Brothers. We shall highly esteem these remembrances which were kindly presented to us by the widow of Mr. Prevost on our visit the present week at San Jose, on the occasion of the Prevost Benefit.

NEW SWEET CORN.

We return thanks to our kind friend S. E. Magoon Esq., of Mariposa, for a liberal sample of the celebrated "Buckland" Sweet Corn, originated in Connecticut, the best Corn known.

BUREAU OF STATISTICS—WASHINGTON.

The Monthly Report of this Department of our Government is at hand, which we shall soon examine.

MASS. HORT. SOCIETY.

We have received the Annual Transactions of this prosperous Society. From its pages, which contains much that is interesting, we shall glean at an early day.

A PILE OF BOOKS, LETTERS AND MSS.

We are obliged to defer examination of many Books received, also Letters, and Mss. copy, till another week. Having been engaged in the cause of humanity for the PREVOST FUND for many days, we ask indulgence for any seeming neglect.

COTTAGE IN ELDORADO.

We ask the attention of those who wish a pretty "Rural Home" in the Mountains, to the advertisement in our columns—that speaks a chance that is rarely found. Purchasers in want should hurry up.

CASHMERE GOATS.

A Bill is now before our Legislature asking Bounties for this interest, the Bill is in the hands of the Committee, and we shall discuss it next week.

THE "ADELAIDE HOUSE," SAN JOSE.

There is no Hotel outside of our City that can surpass this most admirably-conducted Hotel.—Spacious, and elegant in all its arrangements, and in the hands of its most able and courteous proprietors, it has won an enviable fame as a first-class house of accommodation.

Our Farmer readers should be sure and read every one of the Horace Greeley "Essays," now re-published by us every week. There are good practical lessons which must be really beneficial to all who read with a *desire* to be benefitted.

PREVOST CONCERT, SAN JOSE

Agreeable to the announcement, Ole Bull and his highly-talented Company, gave their Concert at San Jose, on Tuesday Evening, for the PREVOST FUND, which resulted in a most grand success for this Noble Charity.

At an early hour "Armory Hall" was crowded to its utmost capacity. Every reserved seat was taken—the aisles full, and every space occupied; and had a larger Hall been secured it would have been filled. It was the largest gathering ever seen at a Concert in San Jose

The day had been stormy, but before sunset the clouds gave way, and the bright sun shone out, as a signal of the success that was to crown the good cause in hand.

The Company of Artists seemed inspired by the sacredness of their cause, and, in despite of the utter unfitness of the Hall for such a Concert, never was a Concert more complete.

Ole Bull played with a master touch that thrilled upon the hearts of the whole audience, and called forth wonderful applause and repeated encores.

Miss Hattie Safford, the Beautiful Songstress, carried the house by storm—her sweet voice and melodious notes winning great applause.

Mr. Hoffman, as a Pianist, has few equals. He played with magic power, and was called back *three* times—encores rarely won by Pianists.

Mr. Macdonald sung with great effect,—was loudly encored, and won hearty approbation.

We do not think there has ever been an entire Company of Artistes so united, harmonious, and so universally approved and esteemed as the present one.

We are confident it was the best Concert ever given in San Jose.

During the Intermission, a series of Resolutions prepared in Committee were read by the Editor of this Journal—from the stage—and approved, they will appear in this report.

At the close of the Concert, Resolutions complimentary to Ole Bull and his Company, with a Vote of Thanks for his generous aid, was also read and proposed, and received with three cheers.

These Resolutions also appear in this report.

The Concert entire was a Grand Success,—the result of which will approximate to $800, and may be swelled to $1,000.

In addition to this most agreeable result, we ask attention to the action of the PREVOST COMMITTEE, in another column.

THE WIDOW PREVOST AND OLE BULL.

A most interesting and affecting meeting occurred at the Auzerais House, where the Widow Prevost called to pay her respects to Ole Bull, and to express her grateful recognition of his generous services for her. Mrs. Prevost then presented two photograph pictures of Mr. Prevost to Ole Bull, which she had dedicated to him, in suitable words, over her own signature. The meeting will long be remembered by those present.

THE PREVOST FUND.

The following appeal, Preamble, and Resolutions, were read by the Editor of this Journal, to the Meeting, during the Intermission,—warmly approved and unanimously adopted:

It is well known to our citizens that Louis Prevost, the Pioneer in "Silk Culture," devoted his life-energies to his work, and, regardless of ease, comfort or wealth, labored until his life fell a sacrifice to an overworked frame.

Louis Prevost, like all other martyrs to a good cause—*died poor*—leaving his family in poverty; and although many friends—true friends—have been desirous of testifying their good will and respect for his memory, no fitting opportunity came to do that for him, his memory, or for his family, until the noble Ole Bull, touched with sympathy for one who, as the *friend of his friend*, he felt called upon to labor for. It was to this end he has now come—tendering a *Free-will Offering* to the *Prevost Fund*.

This night he is with you, heart and soul, in this noble charity, thus arousing the sympathies of the generous-hearted and liberal-minded, to contribute whatever they may be disposed to give, even beyond the rich reward they now enjoy in this noble gathering.

THE TRUST FUND FOR WIDOW PREVOST.

Whereas, The Fund which shall be commenced to-night, for the Benefit of the Widow of Louis Prevost, having originated through the noble generosity of Ole Bull, it is the desire of those who have now contributed, or may hereafter contribute, that the wishes of this most distinguished Artist and noble Philanthropist should be regared, in the disposal of these Funds; and, as it was the wish of Ole Bull, that whatever sum should be raised should be *invested* in the best and safest manner, as a "Trust Fund," the interest of which should form an Annuity for the Widow, therefore

Resolved, That the sum received from this Concert, and all sums hereafter received, shall be invested, at once, in some safe manner, as a *Permanent Fund*, sacred and only for the use of Widow Prevost;—the *Principal* to remain as a Permanent Fund—the Interest to be paid to her Quarterly, forever.

It is, however, understood that, should the Fund be large, the Committee have full power to erect a suitable Home for the Widow—erect a suitable Tablet to the Memory of the Lamented Prevost, and the *balance* to constitute the *Permanent Fund*.

It is hereby understood by the contributors everywhere, that this *Fund* can never be alienated in any manner whatever,—the Interest only to be used for the purposes named.

TESTIMONY TO OLE BULL.

The citizens of San Jose and vicinity, here assembled, desirous of giving an expression to their feelings on this eventful occasion, offer the following:

Resolved, That we here tender to Ole Bull and his Company, a most grateful sense of appreciation of the NOBLE DEED they have now performed in the cause of Humanity, in thus laying the corner-stone of a Fund for the Widow of the late Louis Prevost, the well-known and universally-esteemed Pioneer of Silk Culture.

Resolved, That we here offer, also, our most cordial and affectionate good-will, hoping his life and health may be spared to accomplish the darling wish of his heart for his Native Land;—that, as he shall now soon leave us, our best wishes go with him, and that his journey homeward shall be a prosperous one;—one of safety, success, and pleasant to remember; and when he shall reach that dear spot—"Home, Sweet Home"—the memory of this night shall be to him one of the "*Pleasant Memories*" of our land, where the Name and Fame of Ole Bull will ever be held in "SWEET REMEMBRANCE."

COMMITTEES' DOINGS FOR THE PREVOST FUND.

It may not be generally known that the true friends of Louis Prevost *have* been at work, yet such is the case, and as the Public Records cause it to appear that the Homestead and all the property of Louis Prevost was sold by the Sheriff, we make the statement that such was the fact; but in order, if possible, to save something for the Widow of Mr. Prevost, a few Citizens of San Jose, —whose names appear in the Committee—met, and resolved upon action. For this purpose they examined into his affairs, and found his entire Real Estate was under mortgage to the Hibernia Savings Society, under interest at two per-cent,—that had not been paid for years.

The Committee found the Hibernia Institute ready to be liberal, and the money was raised by the Committee.

The Real Estate was Mortgaged to its full value, but by the liberality of the Hibernian Institute a liberal portion of the interest was released, and the Mortgage assigned to this committee, who in order to make a clear title to all the lots previously sold by Mr. Prevost, caused the sale of all under the Sheriff, acting with a view to realize the largest amount to the fund, make all thus good and secure all that could be made from the estate.

The entire claims under the Mortgage and seizure was $12,121, by a release of interest of one half by the Hibernian Institution, and the liberality of the Sheriff and Recorder, who both generously remitted all their fees, and also a remission of half the fees of Counselor Ryland after all the several parcels of land and the entire property sold, the Committee have now in trust about $3,300. This sum together with the proceeds of the Concert of $800, make the sum now a little over $4,000.

There are now many friends of Mr. Prevost in San Francisco, Sacramento, Stockton, Marysville, and other portions of the State, who it is hoped stand ready to aid this noble charity, and for this purpose it is hoped they will at once come forward voluntarily and generously, so that the Committee may carry out the following plan, which it is hoped will be appreciated by all who remember the self sacrificing and noble spirited Prevost.

The Committee propose to secure a neat and comfortable Homestead for the Widow, of the value of about $4,000, the sum of $1,000 for a suitable Monument to Mr. Prevost, and to place the sum of $5,000 in trust—the interest of which is to be paid to the Widow quarterly. To do this requires about $6,000 more, which sum it is confidently hoped that it can be readily made up in our State without much effort.

The Committee would therefore earnestly call the attention of all who are disposed to aid this object.

Subscriptions can be made to Messrs Hentsch and Berton, Bankers, San Francisco, D. S. Payne Treasurer, San Jose, and to Col. Warren, Editor of the FARMER

The Committee believe that one so worthy as the late Louis Prevost will have his memory cherished, and his Widow provided for promptly and cheerfully.

COMMITTEE OF THE PREVOST FUND.

D. J. POSTER, Chairman,
D. S. PAYNE, Secretary and Treasurer.

W. A. January	W. R. Dougherty
H. O. Weller	E. Martin
M. Corcoran	J. S Johnston
J. S. Carter	Col. Warren.

26th January, 1870.

MY DEAR ALEXENDER:

When you see Mr. Prevost, will you have the kindness to ask him what quantity of Silkworm Eggs we could get, in case we should desire to purchase a large amount. Please ask him, also, what season would be the best for such purchase, considering the circumstance of sending them to Italy. Let me know, also, at what price we could get them, if purchased in a great quantity, say 20,000 or 50,000 ounces.

It would also be useful to know if the disease which has destroyed the seed in Italy has not made its appearance in California.

Supposing that we should desire to purchase a large amount of Eggs, please to ask Mr. Prevost in what way we could do it, so as to secure the best Eggs, etc.

Hoping to hear from you, I am

Sincerely yours,

T. BOTTA.

[We publish this Letter to show the connection between our friends Ole Bull and Son, and the friend of Ole Bull and Son—Mr. Botta. These inquiries led to the generous act of Ole Bull for Mr. Prevost.—ED.]

GRAND HOTEL STAND.

We call attention to the advertisement of the "Cameron House," for sale at Santa Clara. This is one of the best Hotel Stands in our State. Situated in a populous region of country, in the hands of an energetic man a fortune can be made easily in a few years.

Home Correspondence.

SILK CULTURE.

EDITOR CALIFORNIA FARMER:

In your paper dated January 20, I observed an extract from an article by I. N. Hoag. Believing the form of your queries at the close likely to mislead parties not acquainted with the fact of your being one of the strongest advocates of *Silk Culture*, and the *very first* to place its merits before the public,—into the belief that you doubted its success, I wish to give a few words of explanation: Mr. Hoag has been writing a series of letters through the *Sacramento Union*, explaining the cause of the partial failure of Silk Culture in 1869. It is plain to my mind that you have not read those letters, but probably copied an extract from one of your exchanges. Mr. Hoag has demonstrated in his letters that the failure alluded to was owing to temporary causes,—the chief of which was the *Ice box*, and therefore not at all likely to occur again; so you see the cause of failure was the same in the upper as in the lower counties. What convinces me that I am right in my conjecture that you copied an extract from one of his letters, is the fact that, in the same letter Mr. Hoag, after admitting his failure the past season, from causes stated, and giving his experience concerning his profits in the business in 1868,—proceeds to show the success of others in 1869 who did not place their eggs in the fatal refrigerator,—naming Mr. Flint, Mr. Ballou, and others whose profits in 1869 fully equaled his own in 1868, deeming it not at all likely that Mr. Hoag would feel called upon to offer further explanation after his voluminous and luminous exposition already before the public. I have ventured to address you these few lines, confident that you are ready to correct the unfavorable impression conveyed in your queries referred to.

In connection with the subject of Silk Culture, I would state that, owing to the little rain up to the present time, only a few in this vicinity contemplate commencing Silk Culture the present year; nevertheless, those engaged in it were never more enthusiastic in the cause, or more sanguine of success. We have just discovered that we have not before known the advantage of the climate we here possess. We have been boasting of the lateness of our Summer season, whereas our real advantage lies in our early Summers—thus enabling us to feed several successive crops of the Chinese Annuals instead of feeding in the Fall the comparatively worthless trivoltine variety We no longer cut to the ground our Mulberry trees, but keep them down to four or five feet in height, having, on the side, branches to be taken off at the time required to feed the worms; we have thus an abundance of early food, and, as March and April are with us ever more pleasant than the month of May, we expect to commence feeding the worms about the middle of March, and by the middle of May, feed a second crop of Japanese bivoltines or a crop of hybrids. As for the trivoltines, we have had enough of them for all time. In conclusion, I would state to croakers their time is short; make the most of it, and to Silk Culturists at large—Our triumph is close at hand; enterprise and perseverance will soon be richly rewarded.

Respectfully yours,

ALBERT BREWSTER.

SAN GABRIEL, Los Angeles County.

REPLY.

We can briefly answer our correspondent, and satisfactorily to ourselves.

Confident that we have been an early, constant, and true friend of this interest, we supposed that Mr. Hoag could have furnished *this Journal* with such facts as he thought would be of interest, but as he did not do so, we only selected such points as we wished to comment upon.

This Journal, at an early date, spoke of the erroneous system of keeping back Eggs, as fatal to a healthy product; we knew also, that those Cultivators that acted rationally would be successful, and those that violated nature would fail in their labor, and so published the facts; but as many Cultivators give little or no time to reading and study, we presume they did not read our remarks, as such persons fail to give any support to the very Journal that advocates their interest best.

All the facts stated by our present correspondent have been again and again published in this Journal, and if the writer has been a reader of the FARMER, as he and all other Cultivators should have been for years past, they would all have learned many truths that would have made them wiser.

IMMIGRATION MATTERS.

RED CREEK, N. Y., February 15, 1870.

To the Postmaster at San Francisco:

Dear Sir—As I know no other man in your City to whom to direct a letter, will you please be so kind as to send me the names and address of some of your local papers. We never see a California paper here, and there are many (like myself) that would be glad to get some idea of the climate, soil, productions, inhabitants, schools, churches, society, price of land, and, in fact, everything that pertains to the prosperity of the country that a man would want to know before immigrating.—If you will send me the address of some papers or periodicals that will furnish the required information, you will oblige,

Very respectfully yours,

* * *

[The above Letter came to our Box, and we immediately despatched a file of FARMERS and also a liberal lot of our Country and City Exchanges, to answer the desired end. The inquiries show the feeling towards California. —ED.]

ORANGES.

Oranges are very plenty at Los Angeles, this year. They hardly pay for the gathering, as the price falls very low.

Eastern Correspondence.

NEAR FRANKFORT, KY, February 8, 1870

MESSRS. WARREN AND CO.:

Your CALIFORNIA FARMER has been read by us with much pleasure and advantage, during the last year, and the numbers have been carefully and widely distributed to my correspondents, who would be interested with it. The progress of your great young State has been observed with agreeable interest, and in all of her rapid advancement she has the cordial congratulations of true lovers of improvement and progress. Already we feel her competition in the wheat market of New York; and her superior fruits challenge our admiration—the sweetest and finest oranges which have been in the Frankfort market this season having come from California; while her wines stand in equal estimation with our sparkling Catawba.

We continue to fill occasional orders, for some of your people, for fine cattle, horses, sheep, and goats, which also gives evidence of progress.

The Improved Short-horn Durham bull, which has been the great improver of so many inferior families of cattle, in various portions of the world, will, no doubt, add equal benefit to the same cattle of your State, elevating them in the standard of excellence, both for beef and for milk. This breed has greatly advanced in price in Kentucky, during the last year, and the supply has not been quite equal to the demand, even at prices which many persons consider to be high. Several American-bred Durhams have also been shipped to England at prices, in the thousands, which appear almost incredible, and they have given the fullest satisfaction to the purchasers.

The public taste for dress goods for gentlemen's and ladies' wear, still more than ever enhances the price, and increases the demand for wool of medium fineness, and long enough for the combing process in manufacture. It is sad to know the destruction and the depreciation of the flocks of fine-wool sheep, consequent upon the changing public taste in this respect. Those are acting most wisely who, by the gradual infusion of long-wool blood, will soon transfer their flocks into the production of wool to suit the public taste and demeanor of manufacturers. Whilst Kentucky confronts your State in the wool market in New York, we feel the competition of Oregon in the combing-wool market much more, and the growing of this wool, in the congenial climate and the cheap lands of Oregon, must be exceedingly remunerative. In Kentucky, on our most valuable lands, the breeding of long-wool sheep pays well, even for their wool, but still more by the sale of the males, as crosses, for the improvement of other breeds.

But the combing-wool which brings by far the highest price of any other, on account of its superior lustre, fineness, elasticity, durability and beauty, is the wool of the Cashmere or Angora goat. Scarcely a well-dressed lady can be seen in our fashionable circles, without more or less of this superior material in her apparel. From it she derives her most gorgeous dresses, and her most resplendent ornaments. The demand for the material is so great in American manufactures that it is extensively imported, at at least one dollar per pound, in gold, in the fleece;—and also largely in the skins or pelts, at from ten to thirty dollars each. Of course, all of American growth which can be produced, is in remunerating demand.

How much it is to be regretted that American wool growers have so much undermined American taste for costly apparel, and have failed, by want of confidence in the market, to supply the demand of our American manufacturers. The producers of this material in California should not fail to make themselves known as such in the Eastern markets, and the hills and mountains of your State should be alive with the animals which grow it, and which cannot fail to be far more remunerative than sheep of any breed.

Another, but rather a second-hand product of California, is at present exciting much interest in Kentucky. I allude to "John Chinaman." Our domestic and farm labor has been greatly impaired, indeed, and almost destroyed. Will the Chinese supply the desideratum? Is the question. We want his industry, his skill, and his economy, but we fear him as a citizen, a voter, and a religionist.

Mr. Coopmanschap, of your City, made a favorable impression on this subject, for Kentucky, last Fall, and some of his consignments of Chinese laborers have passed by us, and have arrived safely at their destination in Texas, and no doubt give full satisfaction as railroad laborers, and no doubt, our necessities, if not our taste will require us soon to follow this example. What advice can you give us on this important subject?

With best wishes for your continued prosperity,

Respectfully, etc.,

ROBERT W. SCOTT.

Though you may not have regarded me as a subscriber, I take pleasure in enclosing [illegible] P. O Order for $5, and I send my card, that you may see that at 82 I am still moving slowly in the same old pathway.

R. W. S.

THE "OWL."

The March number of the Magazine bearing this singular name has come to hand. The Owl is edited, printed and published by the Boys of the Santa Clara College, and is a most truly a creditable Magazine. The name indicates a "Bird of the Night," and has been given to this Magazine because the Fathers were not willing that the regular studies of the Students should be interfered with, and the Boys—with a laudable ambition mental improvement—agreed to rise at [illegible] before day-break, and to set the type and do the material mechanical work in extra hours, rather than not publish their Magazine, and thus the "night-workers," the *Owl* was a suitable name.

The March number—No. 2—is an [illegible] one,—several articles evincing talent and study more than ordinary merit.

GRAND TESTIMONIAL.

PUBLIC CROWNING OF OLE BULL.

The great popularity of this wonderful Violinist has excited the community so much that it became necessary to offer a PUBLIC TESTIMONIAL, by the many admirers of this truly great and good man, and to-morrow evening has been selected for the occasion.

A Special Programme has been prepared for the occasion, and, in addition to that most excellent and highly-talented corps, the "Laemlin Sisters" have kindly tendered their services to do honor to Ole Bull. It will be an event long to be remembered.

The Concert will be at Platt's Hall, as noted in the Programme, and at this Concert Ole Bull will be crowned with a Golden Wreath, as KING OF THE VIOLIN.

This will be the very last occasion in which this most truly noble and distinguished man can be heard in our midst, therefore the opportunity will be a rare one, as the exercises will be of a deeply interesting character.

GRAND PUMP FOR DRY WEATHER.

We have received several letters from different sections of the State all speaking in praise of the GARRICK FORCE PUMP.

Our Correspondent finds it the easiest Pump to work, not likely to get out of repair, and always sure of water. It does not require half the labor of many kinds of Pumps, and its cost comes so reasonable all can use it.

Messrs Linforth, Kellogg & Co., has had an immense demand for this Pump. Our Stock men and Ranchers should call and see it, and also call and see the other goods at this warehouse, advertised in our columns.

OUR EXCHANGES

By the notice we gave some time since that we could not enlarge our *list of Exchanges*, except to Journals of same interest, or those of value, we hereby give notice that those Journals that do not receive the FARMER after our *Number Two*, will please understand that however much we may regret to refuse the Exchange, it arises from our *utter inability to do so*, for our applications for Exchange has reached the number of nearly *One Thousand*. This will show our cause of refusal. Those that receive No. 5 and 6 will remain permanent Exchanges.

THE TESTIMONIAL TO OLE BULL.

The Concert tomorrow eve at Platts Hall promises to be a very grand success—this is the last time that our citizens will have the oppertunity to hear him, as he returns to his native country. As we may never look upon his bright and genial countenance again, or listen to his wonderful melodies—this opportunity should not be lost to hear him.

All the exercises of the evening will be of the highest order, as the Artists are all of superior merrit and rarely equalled.

FLAX GROWING.

We learn that there is an increased attention to Flax-growing at San Diego, and in many other places down South.

Oregon has planted Flax very largely; the acres count by hundreds.

Flax-growers should always remember that the Linseed Oil and Lead Works purchase all the Seed that can be raised, and the Cotton Mills will buy all the Flax Straw. The Proprietors of the Linseed Oil and Lead Works have always evinced a great liberality to the growers of Flax, all over our State.

REASONS WHY EVERY FARMER AND STOCK-RAISER SHOULD TAKE THE "CALIFORNIA FARMER."

1st. Every Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State

2d. Every such person should give his sanction and support, generously and voluntarily to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefitted* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and the Stock-raiser will always be better advised of the markets, and that kind of information so important to his interests by constant access to a "Home Journal."

6th. The *California Farmer* has faithfully advocated the best interests of the Farmer and Stock-raiser for sixteen years steadily and is the *only Agricultural Journal in California*.

7th. The *California Farmer* contains the most important information relative to these interests in every branch of Agricultural science.

8th. The *California Farmer* contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The *California Farmer* contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Agriculture.

10th. The *California Farmer* is now the *only paper* on the Pacific Coast that is continued by its *original Editor and proprietor*, commencing at the time this Journal commenced; and having been constant in its efforts for the good of these interests, deserves the cheerful patronage of all engaged in industrial pursuits, and of all good men.

M. C. HAWLEY & CO., 108 Front St., San Francisco.

BUCKEYE Mower, Reaper, AND SELF RAKER

NEW YORK. SAN FRANCISCO. Portland.

THE BUCKEYE FOR 1870!

EARLY ROSE POTATOES.

A Splendid lot of these,

Best of all Early Potatoes,

And raised here in California can be had at the

New York Prices.

We invite all Potatoe growers to call and see them at our office, where we can show them a sufficient number of testimonials as to their Quality and Productiveness to convince all that the EARLY ROSE is the very

BEST EARLY POTATOE KNOWN

One of the grand features of this wonderful Potatoe is that it succeeds most admirably in high, dry lands—Some grand results we have here in reports now to be published.

Those who want Pure Seed of California growth, and at New York rates or what it would cost to bring them here, can have larger, fairer and fresher Seed than any that can be Imported.

For Sale at FARMER OFFICE, 320 Clay Street, San Francisco

CAREFUL DIRECTIONS.

We would most particularly desire our correspondents to be very careful in sending their Letters, Orders and Remittance to us, as there are several firms of Warren & Co., and unless the address is very plainly marked, mistakes will arise.

All Letters, Orders, Parcels, &c., intended for this office should be addressed WARREN & CO., California Farmer Office

NEW AGRICULTURAL BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz.: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS in those parts needing such illustration; so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess a valuable library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

THE FIELD AND GARDEN VEGETABLES OF AMERICA By Fearing Burr. Containing descriptions of all Vegetables, their different species and varieties grown in this country, with full illustrations of them.....Price $5 00

THE GARDEN VEGETABLES OF AMERICA. By Fearing Burr.....Price $2 50

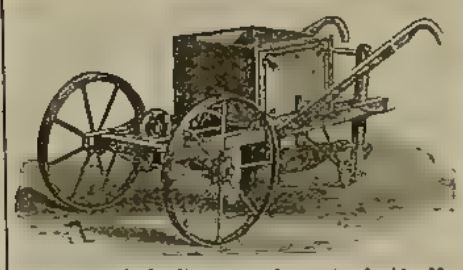
Horticulture and Floriculture.

These are all New Works, or New Editions, of the most Valuable Works, and published in the best style.

For Sale at the FARMER Office.

32-6 WARREN & CO.

TRUE'S IMPROVED POTATO PLANTER.



This is, undoubtedly, one of the most valuable Machines adapted to Agricultural purposes ever introduced.

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such sized slices as the farmer may prefer; drops these pieces with the most perfect regularity, and covers them perfectly, and does all this as fast as a horse can walk over any ground that can be plowed

No intelligent farmer can fail to see that an implement with which one man can, with the aid of a horse plant six acres of potatoes in a day, is of inestimable value, because the days in which PLANTING can properly be done are very few, while he has all SUMMER and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner, for attending to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor-Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune with it.

Particulars and Catalogues can be had at our office

WARREN & CO.,
320 Clay street, up stairs.

A Bargain!

Fine Homestead on the Mountains!!

A very fine COTTAGE HOME, in Eldorado County, containing Twenty Acres of Choice Land pleasantly situated, and with pleasant surroundings

A handsome Cottage House of Five Rooms on the first floor, and Two above, with every convenient arrangement for Family Comfort—Closets, Bath-room, Cellar under house, etc.

FOREMAN'S PLACE WANTED

A German Gardener and Orchardist wants a place where he can find steady employment. The advertiser fully understands Orchard and Vineyard culture; he is thoroughly acquainted with the Pruning of Orchards and Vineyards, and can give the very best of recommendations of his qualifications for such duties. He desires a permanent place where he can by his labor make his work tell. Inquire at this Office. 17

Home Miscellany.

THE SONG OF STEAM.

BY C W COTTON.

Harness me down with your iron bands;
Be sure of your curb and rein:
For I scorn the power of your puny hands,
As the tempest scorns a chain.
How I laughed as I lay conceal'd from sight
For many a countless hour,
At the childish boast of human might,
And the pride of human power.

When I saw an army upon the land,
A navy upon the seas,
Creeping along, a snail-like band,
Or waiting the wayward breeze;
When I marked the peasant faintly reel
With the toil which he daily bore,
As he feebly turned the tardy wheel,
Or tugged at the weary oar;

When I measured the panting courser's speed,
The flight of the courier dove,
As they bore the law a king decreed,
Or the lines of impatient love,
I could not but think how the world would feel,
As these were outstripp'd afar,
When I should be bound to the rushing keel,
Or chain'd to the flying car.

Ha! ha! ha! they found me at last;
They invited me forth at length;
And I rush'd to my throne with a thunder-blast,
And laughed in my iron strength.
O then ye saw a wondrous change
On the earth and the ocean wide,
Where now my fiery armies range,
Nor wait for wind or tide.

Hurrah! hurrah! the waters o'er
The mountain's steep decline,
Time—space—have yielded to my power;
The world! the world is mine!
The rivers the sun hath earliest blest,
Or those where his beams decline;
The giant streams of the queenly west,
Or the orient floods divine.

The ocean pales where'er I sweep—
I hear my strength rejoice;
And the monsters of the briny deep
Cower, trembling, at my voice.
I carry the wealth and the lord of earth,
The thoughts of his godlike mind;
The wind lags after my going forth,
The lightning is left behind.

In the darksome depths of the fathomless mine,
My tireless arm doth play;
Where the rocks never saw the sun decline,
Or the dawn of the glorious day.
I bring earth's glittering jewels up
From the hidden caves below,
And I make the fountain's granite cup
With a crystal gush o'erflow.

I blow the bellows, I forge the steel,
In all the shops of trade;
I hammer the ore and turn the wheel
Where my arms of strength are made;
I manage the furnace, the mill, the mint;
I carry, I spin, I weave;
And all my doings I put into print,
On every Saturday eve.

I've no muscle to weary, no breast to decay,
No bones to be "laid on the shelf,"
And soon I intend you may "go and play,"
While I manage this world myself.
But harness me down with your iron bands
Be sure of your curb and rein:
For I scorn the power of your puny hands,
As the tempest scorns a chain.

MEMORIALS OF LIFE.

No matter what may be your sphere in life, you may so act, work in it to secure some good result. In our mere contract with others, as friend, acquaintance, we may produce an influence which will remain an ever fresh-memorial of a soul illuminated with truth and purity. No stately monument may rise to grace the spot of earth which incloses our ashes, but our name may be enshrined amid the sweetest associations in the deepest recesses of loving hearts, 'Tis true

"The evil that men do live after them."

But what a legacy? crushing, blasting, withering much that would otherwise have been good?—How great the accountability of those who wield a potent influence for nefarious influences.

The memory of the just is blessed."

Let this urgent yet inspiring truth be prominently fixed in our minds. How vividly illustrated it is by the examples as those holy men who far back in the centuries sought to promote the welfare of others rather than exalt themselves! whose very nobility and power grew out of their saintly lives, whose names are as fresh now as the dews which still brighten the hillside where once their feet pressed the springing grass, and whose deeds and ringing precepts stimulate us to lives of Christian manliness and virtue.—*Phrenological Journal*.

"It is a standing rule in my church," said one clergyman to another, "for the sexton to wake up any man that he may see asleep." "I think," returned the other, "that it would be much better for the sexton, whenever a man goes to sleep under your preaching, to wake you up."

Two little girls were heard one morning engaged in a dispute as to what their "mothers could do." The dispute was ended by the youngest child saying, "Well, there's one thing that my mother can do that yours can't—my mother can take every one of her teeth out at once!"

WIVES.

The *New York Times* has a chapter upon Wives and on this subject makes pointed inquiries, and thus presents the subject:

[illegible] WIVES.

What has become of the old-fashioned helpmate? Or, perhaps—since cherished and wonder-striking specimens still linger here and there around us—we should rather say, what is become of her? The notion appears to be slowly but surely gaining ground that for woman in her conjugal relation to *help* man is an absurd and exploded fallacy. "If I cannot be allowed to *pet* my wife," said a backsliding reformer in the Women's Convention, last week, "I shall not go for female enfranchisement." The observation is responsive to the notion we speak of. Women are to be pets, dolls, toys—creatures to be fondled, prettily dressed, played with—anything, in brief, but co-workers or helpmates to their husbands.—There is always danger of exaggeration in the discussion of social topics; but it will hardly be said that we strain truth in affirming that, in our great cities at least, feminine responsibility in marriage is getting to be sadly attenuated, and that the fact augurs no good for the average domestic happiness of the future.

WHY YOUNG MEN DO NOT MARRY.

Young men complain on all sides that they are not rich enough to marry. When thought of at all, this is commonly attributed to the hard times; but there were hard times long ago, and people then married, and were given in marriage in the Spring of their lives, before the freshness and gaiety of youth had departed, and head and heart had alike grown gray in the struggle for gold. It was formerly thought that with health and strength one pair of hands could win bread for two—provided always thrift and cheerfulness abode in the home to take care of what was gained, and impart the needful spirit to gain more. We have changed or are changing all that. More is expected now-a-days from the man and less from the woman. A girl with any pretensions to beauty or family, looks, in marrying, to be maintained in luxury without physical effort of her own, and even those moral repayments which of yore were things of course—the tacit acknowledgements that brighten the fireside and smooth the rugged masculine path—are now, we fear, all too seldom regarded as obligatory. Instead of these, the average husband is perhaps treated to a daily exposition of woman's wrongs, informed that man is her tyrant and enslaver, but that, thanks to Providence and Mr. John Stuart Mill, a year of deliverance is surely at hand.

USELESS WIVES.

We are not of the number who would turn a deaf ear to the reasonable complaints of the sex, or decline to revise legal or social usages that discriminate unfairly against them. But it is surely not without significance, at a period when the clamor is so loud for woman's rights, and so sharp in reprobation of her alleged slavery, that there should be so many useless wives, drones of women, who, whether as girls or mothers, seem to think—when they think at all—that their sex shields them from every responsibility, and that it is the business of men to fight the whole of the battle of life alone. It is, no doubt, true that this is in part the fault of the men. They want to "pet" their wives, to make babies of them, to array them in purple and fine linen, to see them dazzle the opera-house and saloon with their silks and ermine, and pearls and diamonds. Too busy to "dress" themselves, men have, in a fashion, assigned the monopoly to wives and daughters.—The fact has tended to stimulate the greed of women for dress, and to augment their self-love while naturally weakening their powers of self-control, and draining the purse of their husbands. The subject is one that admits of being estimated from many sides and discussed from different points of view; but there can be no harm, at a period when so much is said about the rights of woman that are unjustly withheld by man, in suggesting some slight consideration of the possible rights of man that are withheld by women.—Whatever the result of such consideration with different thinkers, it will hardly be gainsaid that women ought to have duties in life whether they generally acknowledge them or not; and that in this struggling century men have but a doubtful right to have, and women a still more questionable right to be, what we have stigmatized under the name of "Toy" Wives.

SUNLIGHT A NECESSITY.

Sun baths cost nothing, and are the most refreshing, life-giving baths that one can take, whether sick or well. Every housekeeper knows the necessity of giving her woolens the benefit of the sun, from time to time, and especially after a long rainy season, or a long absence of the sun. Many will think of the injury their clothes are liable to, from dampness, who will never reflect that an occasional exposure of their own bodies to the sunlight is equally necessary to their own health.

The sun baths cost nothing, and that is a misfortune, for people are still deluded with the idea that those things only can be good or useful which cost money. Let it not be forgotten three of God's most beneficent gifts to man—three things the most necessary to good health—sunlight, fresh air and water, are free to all; you can have them in abundance, without money and without price, if you will. If you would enjoy good health, then see to it that you are supplied with pure air to breathe all the time; that you bathe for an hour or so in the sunlight, and that you quench your thirst with no other fluid than water.

A LUXURIOUS BATH.

Strangers to our City, and all persons should not fail to visit and enjoy the famous Turkish and Roman Baths of Dr. Zeile, on Pacific Street, that is one of the luxuries that should be enjoyed during Festival week.

OUR LADY CORRESPONDENT FROM PENN

GREEN TREE, February 8, 1870.

My dear little Nelly—I have had a letter in my *heart* for a long time, and this morning I am tempted to try and put it on paper. I don't know whether I shall succeed or not, but I am quite determined to write you a little letter, all for your own self and nobody else.

Come here and look out of my window, and tell me what you think of the white winter world that you see.

Beautiful, is it not?

How still everything is! We can hear the rain on the roof and on the leaves, but we never hear the snow fall. It is as silent as the sunshine. It has been falling all the morning, just as you see it now,—no faster—no slower; it seems to come down through a sieve; the flakes are all alike—so soft and white. Don't you love to watch it? I could sit still for hours and look at it. You cannot see our great round hills now for the snow hides them, but you shall see them another time; but look at these gooseberry bushes under the window; they are all muffled up in white wool, and look as if they were going on a voyage of discovery among the icebergs. The poor trees, too, look comfortable once more, with something to wear, and their white dresses are almost as pretty as the green ones they will put on by-and-by.

But here is a flock of snow-birds—the wonderful little creatures! What a merry time they seem to have in the snow! they are playing "catcher," I think. I have seen children chase each other in that way, over the grass and among the trees, in Summer.

"Where do they sleep?" I am just as wise as you, Nelly;—I don't know; I often wonder. And how do they keep their bare feet from freezing? and where do they get food when the ground is all covered with snow, as it is now? They eat the seeds of weeds and grass, but to day the seeds are hidden in the snow. But, Nelly, you must not think that we have snow like this all the Winter, here in Pennsylvania. No, indeed! we have not had snow enough for sleighing for two years.

Last month we had days and days of real California weather;—the bluest skies, and brightest sunshine, and softest airs, that could be; and the daisies and pansies bloomed in the open border, but they don't often do that in January here, I must own. I brought a few daisies into the house, and they are blooming quite contentedly in the kitchen-window. And, oh, Nelly! my white hyacinth is out in full bloom! Wasn't it nice of it, though, to wait until to-day to come out, when it is so cold and wintry out of doors? I believe it waited on purpose, don't you?

I am sure flowers are a great deal wiser than people know of. But I must not write a full-grown letter to a little girl, for it will tire her to read it. I wonder now how big she is, anyhow? Isn't it funny to be writing like this to a little girl that I never saw? Just think, Nelly, I don't know the color of your eyes! are they blue? I don't know how I came by it, I am sure, but I have a very strong impression that they are, and that they belong to a golden-haired, merry little witch, just about a head taller than my writing-desk. Well, they may be any color they like, so that they look kindly on this letter from

JENNY DARE.

February 14.

P. S.—Yes, Nelly, my letter is going to be a Valentine, or half a one, or a quarter. You see it didn't get started on its journey when it was written, and it was hidden away in my portfolio until to-day, and to-day is St. Valentine's Day.—Isn't it queer, though, that you should be my Valentine? I am sure you never dreamed of such a thing—neither did I; if I had, I would have been provided with a sheet of lovely gold-edged and rose-tinted paper to write this on, but I haven't a scrap of any that St. Valentine would look at. You won't mind, will you?

JENNY DARE.

Santa Clara College, S. J.

Miscellany.

SNAKES LOOSE IN A BALL ROOM.

A very interesting and exciting scene occurred at a ball not twenty miles from this city, a few evenings since. Among the persons present was a young lady who had a great horror of snakes, and imagined—no matter what that the season, if she experienced any unusual alarm—a snake in unpleasant proximity. After dancing awhile, she was greatly distressed by feeling a sensation as though a serpent had fixed itself beneath the folds of her dress. Grasping the head of the monster tightly, she screamed aloud for assistance. A hasty consultation among the gamest of the ladies was held, when it was determined that a young disciple of Esculapius, who was present, should be called to their assistance. He was quickly on the spot, and being a man of uncommon courage, was not many moments within the circle of half-fainting females before he had caught the tail of the snake, and wound it firmly around his hand, telling Miss. M. that she must let go the moment he jerked, and to make the act as instantaneous as possible, he told her that he would pronounce the words one, two, three, and that at the moment he pronounced the last word, she must let go her hold, and that he doubted not that he could withdraw the snake before it would have time to strike. All stood in breathless horror, awaiting the act of life or death, and the moment the words were pronounced the doctor jerked out the longest and most diabolical looking bustle that ever was seen. The whole affair was soon explained; the fastening of the machine had become loose during the dancing, and it had shifted its position in such a way that it dangled about, and induced the belief that it was a snake with an enormous head. The Doctor fell down in his tracts, and couldn't be induced to undertake the capture of another snake on any conditions.—*Omaha Herald.*

ANECDOTE OF FREDERICK I. OF PRUSSIA.

One evening, being too unwell to read his usual devotions, he called upon his *valet de chambre* to read prayers. In the prayer occured the words, "May God bless thee." The servant not deeming it respectful to use *thee* in reference to the king, took the liberty to change the phrase, and read it, "May God bless *you*" The king, exasperated, hurled something at the head of the speaker, exclaiming, "It is not so; read it again." The terrified servant, not conceiving in what he had done wrong, read again, "May God bless you." The irascible monarch, having nothing else he could grasp, took off his night-cap and threw it into the man's face, exclaiming, "It is not so; read it over again." The servant, frightened almost out of his senses, read for the third time, "May God bless you." "*Thee*, rogue," shouted the king.—"May God bless *thee*." Dost thou not know, rascal, that, in the eyes of God, I am only a miserable rascal like thyself?"—From "Frederick the Great," in *Harper's Magazine for March.*

GREAT RESULTS FROM LITTLE THINGS.

A flash of lightning, a prowling incendiary, a demented inebriate, a vindictive enemy, a dishonest neighbor, a careless employee, a forgetful servant, a negligent watchman, a thoughtless child, a defective flue, a rusty stove-pipe, a villainous illuminator, a sweeping disaster, an insidious match, an inconsiderate smoker! These are the Initiators to Fire, Disaster, Loss of Life and Ruin; and the first duty of every Parent, Housekeeper, Merchant, Business Man, Farmer, Manufacturer and Mechanic is to guard against the evil and often fatal results that flow from these "*Little Causes.*"

There is but *one safe way*. Always keep fully insured and at a RESPONSIBLE OFFICE.

REMEMBER

That every day, through one of these and kindred agencies, an average of more than

One Hundred and Fifty Thousand Dollars

Is swept away by fire in the United States alone!

OVER FORTY MILLION DOLLARS

Annually!

. THE LAWS OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.

2. If subscribers wish their papers discontinued, publishers may continue to send them until all charges are paid.

3. If subscribers *neglect* or *refuse* to take their papers from the office or place to which they are sent, they are *held responsible* until they *settle* their bills and give notice to discontinue them

4. If subscribers move to other places without informing the publisher, and the paper is sent to the former direction, they are held responsible.—Notice should always be given of removal.

5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is *prima facie* evidence of intentional fraud.

Postmasters would oblige by a strict fulfillment of the regulations requiring them to notify publishers, once in three months, of papers not taken from their office by subscribers.

Under the law of Congress, papers are not charged postage in the county in which they are published.

MERCHANTS'

GARGLING OIL

IS THE

BEST LINIMENT

IN THE WORLD

FOR MAN AND BEAST.

36 Years In Use.

G

Is good for Rheumatism, Chilblains, Corns, Whitlows, Caked Breasts, Sore Nipples, Cramps, Boils, Bites of Animals Weakness of the Joints, Contractions of the Muscles, Burns and Scalds, Frost Bites, Painful Nervous Affections, Chapped Hands, Lame ack Pain in the Side, Swellings, Tumors, Tooth Ache, Old Sores, Hemorrhoids or Piles, Flesh wounds, Galls of all kinds.

A

Sprains, Bruises, Cracked Heels, Ring Bone, Poll evil, Wind galls, Callous, Spavin, Sweeney, Fistula, Sitfast, External Poisons, Scratches or Grease, Springhalt, Sand Cracks, Lameness, Strains, Founded Feet, Mange, Hore Distempers, Garget in Cows, Cracked Teats, Foot Rot in Sheep, and many other diseases incident to Man and Beast.

R

R. D. Taylor, of Concord, Ky., says the Gargling Oil cured a horse of his, injured while plowing by attempting to step over a stump, almost severing the thigh from the body; also that he has used it in his family for fifteen years, and is the best remedy for Cuts, Burns, Bruises, Frost Bites, Strains, Rheumatism, etc., he ever used.

G

From Crump & Bros., Lochrane Landing, Ohio, Nov. 29th, 1856—We are pleased with your medicines. It has been the means of curing a great number of different diseases upon persons, as also upon horses. We think it cures all you recommend it to do. We want you to send us the larger proportion of the variety for "Family Use," in small bottles.

L

From Dr. J. P. Terrell, Warren, Ind., March 3d, 1856—I am engaged in the practice of medicine, and find your Gargling Oil an extremely efficient remedy in all cases where an external application is indicated.

From Dr. G. B. Neal, Burris, Iowa, 1855—I have practiced medicine in this county seventy years, and cheerfully recommend your Gargling Oil as the best liniment in use.

E

From Dr. T W Ellis, Troupville Ga., Jan. 6th, 1856—If I could receive both boxes of the Gargling Oil it would not be too much, as I think I could soon find sale for it all, the inquiry being frequent since it is supposed that I have it for sale

From Dr. Wm. S McCall, Chamois, Mo., Nov. 9th, 1859—Your Gargling Oil is taking the shine off from all liniments of the day. If you desired them I could procure dozens of certificates from the best citizens of the county.

Z

Messrs. McLain & Bros., Wholesale Druggists, Wheeling Va., say, under date of July 24th, 1856 that they can safely recommend the Gargling Oil far more diseases than it is recommended for.

From J. R. Fisher, Uniontown, Pa., June 31st, 1857—Your Gargling Oil is doing much better here than formerly, since its virtues have become known—and the bottles put up for Family Use, without Stain, are much sought for.

R

Extract of a letter from Hon. Nathan Lindsey, County Judge of Shelby county, Iowa, dated Harlan, April 18th, 1857. It is decidedly preferred to any other liniment sold in this section.

Extract of a letter from Samuel S. Hupp, dated Fallsburg, Ohio, July 17th, 1856—In June last, Henry Sallo had a yearling colt that had what was supposed to be Diphtheria, for more than ten days, so that it could not eat, and the throat swollen almost shut, and by the use of three or four applications of the dollar bottles, did the desired effect.

From A. G. Nict, Lewisville, Cochocton county, Iowa, March 1852—I have used your Gargling Oil for the scratches on my horse, and is cured it with the first application.

O

From Enos Mather, Middleport, N. Y., July 23d, 1856—I purchased a bottle of your Gargling Oil of your Agent, A. S. Baker, of Middleport, and as yet have used but half of it. I think it has given me more relief in a case of severe rheumatism of long standing, than anything I have ever used before.

T

Extract of a letter from J. O. Pratt, dated Quincy, Chautauque county, N Y, August 12, 1854—I have been acquainted with your medicine, (Gargling Oil) for the last fourteen years It has proved to be a sure cure for Foot Rot in Sheep, for which I have sold the last bottle, and have calls almost daily for more. Please forward as soon as convenient.

T

Always enquire for MERCHANTS' CELEBRATED GARGLING OIL, and take no other.

Retail price, $1 00, 50 cents, and 25 cents.

Shake well before using, and rub on thoroughly before the fire or some warm substance.

The Gargling Oil has been used as a liniment for thirty six years. All we ask is a fair TRIAL, but be sure and follow the directions.

Ask your nearest druggist or dealer in Patent Medicines for one of our Almanacs and Vade Mecums, and read what the people say about the Oil.

The Gargling Oil is for sale by all respectable dealers throughout the United States and other countries.

Our testimonials date from 1833 to 1863, and are unsolicited Use the Gargling Oil and tell your neighbors what good it has done.

We deal fair and liberal with all and defy contradic

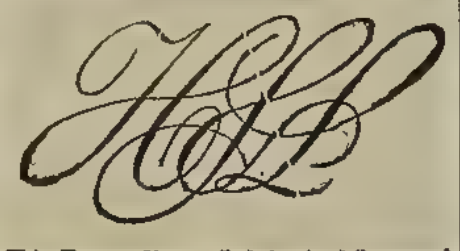
HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE



This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attaches to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Gum, or Gum

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

Hck&Lbt

Is on the red cover of the packages

Railroad Lands.

CENTRAL PACIFIC RAILROAD,
LAND DEPARTMENT.

Sacramento, March 1st, 1867.

The following statement is made for the information of those who desire to purchase Lands from said Company:

1st. Congress has granted to the Company, all the alternate sections of the public lands designated by odd numbers, within a distance of 20 miles on each side of the railroad;—excepting lands to which a pre-emption or homestead claim had attached prior to the 12th of September, 1862, and excepting lands reserved by the United States as mineral.

2d. The Company has no interest in even sections. To constitute a valid pre-emption or homestead claim within the above exception, the party must have resided on the land prior to September 12th, 1862, and continuously since that time. He must also on that day have been over twenty-one years of age and be the head of a family and have filed his claim in the United States Land Office within the time required by law. If he has not these requisites, or has neglected to file, he will have to buy of the Railroad Company.

3d. All persons who desire to purchase lands from the Railroad Company, including settlers, pre emptors, and other claimants, should make application to the Land Agent, B. B. Redding, at the Land Office of the Company, in Sacramento, either personally or by letter, describing the land by legal subdivisions. This application will be filed and the party will be allowed three months to complete the purchase, and during this time the land will not be sold to another without giving such applicant thirty days previous notice. If the purchase is not completed within three months, the land will be open to purchase by others.

4th. Persons who have valid pre-emption or homestead claims to any tract on an odd numbered section, can purchase the same from the Railroad Company at the Government price of $1.25 per acre in greenbacks, and upon the usual credit of five years if they so desire, by filing an abandonment of their claim in the U. S. Land Office, blanks for which will be furnished by the Land Agent of the Company. Such purchase from the Company has these advantages over a purchase from the Government: The party can leave the land if necessary—he can sell or mortgage it—he is saved the payment of lawyers' fees and expenses of witnesses to go to the Land Office to "prove up" his claim—he can get his title perfected in less time—and he can buy on credit at a low rate of interest.

5th. Actual occupants of lands belonging to the Company, will generally have a preference in the purchase at the regular price. No addition to the price is made where there are improvements on the land made by the settler. Where there are conflicting claimants who apply to purchase, an adjudication of their respective claims will be made by the Land Agent, upon due notice given to both parties.

6th. No lands are sold by the Company or the Government, until after they have been surveyed and the plats returned to the Land Office.

7th. The Company sells ordinary agricultural lands at $2 50 per acre, in gold (except sales to pre-emptors as above). Timber lands, lands in the immediate vicinity of the railroad, and tracts having special value above ordinary farming lands, will be sold at prices and on terms fixed by the Board of Directors.

8th. Persons desiring to do so can buy on a credit of five years by paying twenty per cent. of the price down, and interest annually in advance on the remainder at ten per cent. per annum. Thus a purchaser of one hundred and sixty acres at $2 50, which amounts to four hundred dollars, will pay twenty per cent., or eighty dollars, with interest on three hundred and twenty dollars, which is thirty-two dollars—in all one hundred and twelve dollars, paying each year thereafter thirty-two dollars interest, and the three hundred and twenty dollars at the end of five years. This three hundred and twenty dollars can be paid at any time within the five years, but not by installments, and the purchaser will then be immediately entitled to a deed

9th. Applications to purchase lands can be filed in the Land Office of the Company at any time after the same have been surveyed by the Government; but no applications will be acted upon until three months after the maps have been filed in the United States Land Office. Occupants of the railroad lands who desire to purchase should therefore be prompt in filing their applications in the office of the Company within this time. Blank applications will be furnished to all who desire to purchase. No sales will be made except by legal subdivisions according to Government surveys. Purchasers can buy as large an amount of land as they may wish.

10th. No sales are made by the Company until the land is listed over to it by United States Land Officers. Purchasers are thus assured that the title they obtain is perfect.

B. B. REDDING,
Land Agent C. P. R. R. Co., Sacramento.

Corrected Weekly, by Editor Farmer.]

GRAIN AND FLOUR MARKET.

San Francisco, March, 3d.

The Grain Market remains steady in price, no Foreign demand and but little going forward to any Port. The late abundant rains have given full assurance of safety to crops; everywhere the rivers are rising grain is coming in plenty. Our Farmers feel hopeful and everything gives assurance of the largest crops the present year ever known.

The many reports of loss of crops, loss of stock, and great ruin to Farmers, have turned out just as we asserted they would be—all false, as will be seen by the reports from the several sections of our State, and instead of *drying up*, they all report the rains abundant and crops doing well everywhere. If there are any isolated cases of poor looking crops, it is only where the work was poorly done—the "scratch in" system practised. When our Farmers shall all adopt the true system of good culture, there will be no loss of crops, no grumbling, but a cheerful and just recognition of the many blessings we enjoy in our State, of Seasons, Soil, and Climate.

Dairy—Butter, Cheese, Eggs etc

(M. B. French & Co.)

The Dairy department is well supplied—both at greatly reduced rates from former "big figures." Competition from abroad, and an increased number of Dairymen and Poultry raisers, gives a larger supply of Butter and Eggs, at much lower rates. These articles will now always be had at reasonable prices, the time has gone by when a dollar a pound for Butter, and 75 cts. for Eggs, will be paid, "49" prices are gone forever.

PREMIUMS.

The Early Rose Potatoe.

The wonderful celebrity which is now being attained by the unprecedented excellence of the "Early Rose Potatoe," its great productiveness beyond that of any other potatoe known, its early maturity (7, 8 and 9 weeks) surpassing all others, and its great superiority in *quality*, induces us to try to spread its culture as widely as possible.

We therefore will now offer to every *new subscriber* to the California Farmer, from the commencement of our new Volume, Four pounds of the "Early Rose Potatoe," mailed to them *free of cost*, as a Premium for 1870 This will give them seed for another year, equal to 200 to 300 lbs.

P. S. All new subscribers to our present Volume who kindly sent their names before this, if they will send us word they will use this seed they shall have the parcel mailed to them free.

Hotel and Livery Stable for Sale

ASS HOTEL
) (?) CAM ERON HOUSE,

Is now offered for Sale, Also the LIVERY STABLE connected.

THE Hotel Stable have been kept in the best style, and always command a big patronage.

A rare chance will be given, as the Proprietor wishes to retire from business.

For further particulars call on, or address JOHN H. CAMERON, Proprietor, Cameron House, Santa Clara.

Shade Trees! Shade Trees!!

ORNAMENTAL & SHADE TREES

LARGE COLLECTION OF TREES.

EXTRA SIZE SHADE TREES

Elm and Ash Trees.

A splendid lot of very choice and large size ELM and ASH Trees, for PUBLIC SQARES, and STREETS, will be offered in Lots to suit Purchasers.

Mulberry Trees.

Large size Mulberry Trees, White, Red, and MORUS MULTICAULIS, of all sizes, suitable for planting out as Shade or Ornamental Trees, and also as Fruit Bearing, or for feeding the Silk Worm

The Mulberry Tree makes a handsome Shade Tree, and is an Ornamental and Fruit Tree combined

These Trees will be sold in lots to suit purchasers.

SAGE ORANGE TREES.

A few lots of Osage Orange Trees for setting out as Ornamental Trees. Also

SILK WORM EGGS

Of the French Annual Species, for sale.

The above will be sold on the best of terms

P. S.—Orders addressed to A. P. Smith, will be promptly attended to.

Sample Trees can be seen at the FARMER OFFICE, where information of the quality of the Trees and the price can be had.

A. P. SMITH.

Of the well known Smith's Gardens,

Sacramento City, Cal.

COMMISSION SALES-ROOM — AND — Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent on the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can, and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns, and which we have the exclusive sale for this Coast.

We also call attention to the

NEW GATE.

A most valuable invention, particularly to Farmers and Stock Raisers. County Rights for sale.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

The following are the kind of Goods imported or consigned to us for sale and which can be offered on the most favorable terms:

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown

FINEST MIXED LAWN GRASSES,
FINEST MIXED GRASSES FOR PERMANENT PASTURES.

FINEST MIXED GRASSES FOR SHEEP-WALKS
FINEST MIXED GRASSES FOR MEADOW-LAND.

PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR CHILI CLOVER,
KENTUCKY BLUE GRASS.
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental

TREE SEEDS.

TOBACCO SEED,
COTTON SEED,
COFFEE SEED,
TEA SEED.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

These will be ready in the months of November and December.

Collections can be forwarded by post at the following rates:

50 Packets choicest and best		$10 00
25	do do do	5 00
12	do do do	3 00
50 Packets Good Selected		6 00
25	do do do	3 00
12	do do do	1 50

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference

Silk Culture:

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

FLOWERING BULBS.

Lilies, Tulips, Hyacinths, Amaryllis. Anemones Ranunculus, Narcissus, Tuberoses, Peony-Roots, Crocus, Snow-Drops, Very Choice Gladioli,

Choice collections of Flowering Bulbs, comprising all the most showy and leading varieties from $5 00 and upwards

EVERGREEN AND DECIDUOUS SHRUBS, ORNAMENTAL TREES.

FRUIT TREES.

The newest and most approved sorts:

Peaches, Figs,
Plums, Almonds.
Cherries, Walnuts,
Apricots, Nectarines,
Pears, Grapes,
Apples, Etc. Etc.

Also the best varieties of Strawberries, Raspberries, Gooseberries, Currants, and Blackberries.

PERPETUAL FLOWERING ROSES

Of the best kinds.

GREENHOUSE AND BEDDING PLANTS.

Any one desirous of having their Gardens look gay through out the season, can be furnished with the plants at a reasonable rate, by applying at this office.

Every information given as to the cultivation of Plants and raising of Seeds, etc. Also respecting the mode and best systems of Pruning all varieties of Trees, etc.

Gardens and Grounds designed and put in order, and every article furnished for same.

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference.

SPLENDID PREMIUMS!! 1870!

OUR SEVENTEENTH YEAR AND THIRTY THIRD VOLUME OF THE

"California Farmer."

With the New Volume in January we begin our SEVENTEENTH YEAR of LABOR with this JOURNAL

THE CALIFORNIA FARMER PREMIUMS.

The CALIFORNIA FARMER will club with the following Magazines and Journals, and furnish them for the year 1870 at the following rates.

The New York Independent,

PREMIUM ENGRAVINGS,

The California Farmer and the Independent for $7 50, and to present them with Richie's splendid steel engravings of Grant and Colfax, the price of which is $2 each, thus giving them the two Splendid and Popular Pictures worth $4, and both these Papers for $7 50

The CALIFORNIA FARMER and the New York Christian Union, new series, Edited by Rev Henry Ward Beecher, $7 50

The CALIFORNIA FARMER and the Harper's Monthly, Weekly and Bazar, $14 00

The CALIFORNIA FARMER and either of Harper's Magazines delivered post paid $8 00

The CALIFORNIA FARMER and the New York Weekly Tribune, $6 00

The CALIFORNIA FARMER and the American Agriculturist, $4 00

The CALIFORNIA FARMER and the New York Monthly Horticulturist with extra Steel Engravings of "Country Life," $1 00

The CALIFORNIA FARMER and the Phrenological Journal of New York now in its 50th Volume, $1 00

The CALIFORNIA FARMER and the American Stock Journal, $3 50

We shall add others with our next issue

Any other Journal or Periodical desired we will furnish with the FARMER on the most liberal terms when desired.

The Terms of the Farmer will remain the same—$5 per year, $3 for six months, (gold price) and $1 extra when payments have been delayed and these terms are unchangeable. A liberal allowance for clubs; when five copies are paid for six copies will be furnished.

We call attention to the Premiums offered, and the Union of other Journals with ours.

WARREN & CO., Editors and Publishers
320 *Clay St.*, San Francisco.

GYPSUM.

(Sulphate of Lime.)

This well known but most wonderful fertilizer has not yet been practically introduced into the Agricultural interests or before the minds of the California cultivators, for the reason that there was no supply, and because it was hard to make them believe our lands needed manuring.

The time, however, has arrived when, by the admitted fact of the deterioration of our soil and the lessening of crops, something must be done to restore the soil and bring it into that state of fertility necessary to make it profitable to cultivate the soil.

Gypsum is a compound of Sulphuric Acid and Lime, and the object of this fertilizer is the fixing of Ammonia, thus making it the direct food of plants, either by supplying the Sulphate of Lime or by its decomposition, affording the Sulphuric necessary to the due development of certain plants.

Sprengel's Analyses shows the quantity of Lime and Magnesia, Sulphuric and Phosphoric Acids to be very large in the following plants, and for them this fertilizer has no superior:

Wheat, Barley, Oats, Potatoes, Cabbage, Swedish Turnips, Clover, Beets, Turnips, and root crops generally; thus ensuring to a certainty its great importance to the Farmers.

Liebig's Natural Laws of Husbandry gives conclusive proofs of its superiority as a fertilizer to Clover and Grasses, furnishing details of experiments made by distinguished men in various parts of Europe.

According to the experiments made by Berthollet, Gypsum is composed of *thirty-three parts* Lime, *forty-three* of Sulphuric Acid, and *twenty-six* of the water of crystalization.

Gypsum is often called Plaster of Paris, but this is wrong—it only takes that name and character when it has been deprived of its water of crystalization by fire; there it becomes *Calcined Gypsum* or Plaster.

Gypsum for Dry Countries like California, will prove immensely valuable, as when used as a fertilizer in our hot and dry soil, its waters of crystalization are seperated by means of our hot climate and go at once to benefit the plants, while the Acids and Sulphate of Lime is taken up by the soil, enriching it to a very great degree.

The undersigned is now prepared to furnish this valuable fertilizer by the quantity to all who desire to try its well attested virtues.

CHAS. J. JANSON,
222 BATTERY STREET.

STILL TRIUMPHANT!!

THE COMMITTEE OF AWARDS OF OUR STATE and Mechanics' Fair, aware of the superior merits of the H. & L AXLE GREASE over all imitations have again awarded HUCKS & LAMBERT their Premium, their article having stood the test for seventeen years. They are now prepared to sell their well known Axle Grease at as low a price as any other in the market, New York and Chicago not excepted.

P. S.—To consumers—Don't trust to the red ones, ask for HUCKS & LAMBERT'S AXLE GREASE Manufactory, No. 144, Natoma street. Depot 320 Jackson street.

Home Correspondence,

Russian River Valley, February 19, 1870.

Col. Warren:

Dear Sir—In reply to your favor, allow me to state that I have but a garden spot of land (one acre) which I am trying to get in a high state of cultivation, and a portion of which I desire to produce abundantly of the choicest fruits, vegetables, etc., and the remainder I am adorning with flowers, evergreens, etc. I have as yet barely made a commencement, and do not feel able to do much this year; but I think it about time we began to do something towards permanent improvement, and the introduction of Science in Agriculture.—Being engaged in my professional duties, I have but little knowledge on the subject, of which I regard you as a valuable exponent; and yet, if I but succeed in introducing a valuable potato or strawberry, or plant for posterity a noble fruit or shade-tree, I shall do much more for posterity than many of my fellow-citizens of this part of the country are doing. The time has now arrived to abandon the slip-shod system of Agriculture so prevalent in our county, and to inaugurate the much-more rational and successful one developed by scientific research and experiments. Our own R. R. Valley—the fairest and most productive portion of creation—is sadly deficient in energetic progressiveness. Why is it you do not visit our county and stir us up a little? True, you differ from us politically, but we do not *need* political instruction (or partisanship, at least;) and on the subject in which you take special interest, I believe you might do much good. At least, should you ever come this way, you will find my latch-string hanging out, and myself (when not engaged in my professional duties) and my horse and buggy at your disposal.

As for your paper, (aside from the little interest it takes in party politics,) I look upon it as indispensable to the California farmer. Come and see us, and circulate your paper, and infuse vitality into this garden of creation,—the present lethargy of which is such that "Rip Van Winkle's" somnolency appears but a *siesta*.

Very respectfully and truly,

Yours, C. S. W.

REPLY.

We are always glad to receive letters like the above, as they show the right spirit, such as we are glad to find; that is the "leaven that will leaven the whole lump;"—we will help. The *Potatoes* and the *Strawberries* shall go, and *Seeds* too, and we *will* try to take a trip up to that garden-spot and take a "buggy ride" and enjoy the kind hospitality of our friend; and, if we can but stir them up to doing more—to make more bright, cheerful *flower-crowned* "Homes," we shall feel richly paid,—so, kind friend, look out! we are coming.—Ed. F.

Carpenteria, Cal., February 27, 1870.

Editor California Farmer:

The rain has come at last!—many a sad heart is made glad and happy. On the 20th inst. we had a fine shower, which did much good; and on the 23d it began to rain about two o'clock in the morning, and continued most of the time for twenty-four hours. Part of the time it came down furiously, with considerable thunder and lightning.

Since the rain the weather has been delightful, and mother Earth looks fresh and green. The farmers are busy, and prompted to do their best. The grain sown before the rain is up and looking well.

The rain came in time to save us; we can plant trees and raise good crops.

According to the Rain Gauge at Santa Barbara, we have had, altogether, 7.84 inches—enough to insure good crops and pasturage.

I send you a sample of the Castor Bean that grows spontaneously here and becomes quite a tree. It grows and ripens all the year, but all the rains and sunshine we have fail to "pop" it open. You will find it requires a deal of thumping or pinching to get off its shell. It must be a different variety to those cultivated for oil. These appear to be oily enough and very productive, but the "threshing" part is an item against it, as you will discover.

I have seen no Castor Beans grown here for the oil, but I think of trying some this season.

I never saw better corn than grows here, but by the time we get it to San Francisco it nets but little. Corn and beans are rather low now to depend on altogether. Freight and commissions are heavy, and I think the best end of the bargain, because *that* is a sure crop.

O. N. CADWELL.

REPLY.

We are glad to hear from our friend and correspondent. Here is a corroboration of what we said last week. There is no real suffering *down South*; "all is well" now, and the prospects were never better for large crops.

In reply to the "Castor Bean" question, we would say, the sample sent us is not the right kind. Our friend will do well to plant the small "Illinois Bean;" that drops out early; we send a sample; it will pay well to grow. A ready market can be found, at the Linseed Oil and Lead Works, for all that is grown.

SUMMARY OF LATEST INTELLIGENCE.

VICTORIA, MELBOURNE, DECEMBER 8, 1869.

Accounts from the agricultural districts are highly satisfactory. It was feared that the wheat crop would suffer much from rust, but the result has proved otherwise, and this harvest will be the largest ever gathered in the colony, both the area under cultivation being greater and the yield heavier. The hay crop has been unusually good, two to three tons per acre being gathered where the produce last year did not exceed one ton. The demand for labor of all descriptions is still in excess of the supply. The scarcity has induced farmers to send a deputation to Government, desiring them to reduce the numbers employed on public works to the *minimum* for the next few weeks. Harvest men have increased their demands, and now receive 5s. to 6s. per day. Shearing is almost over, a large portion of the wool taken off in the grease. Full prices have been realized at the monthly sales, and about 18,350 bales disposed of.

NEW SOUTH WALES, DECEMBER 4, 1869.

The wool sales during the month were well attended; several parcels purchased at full prices, the rate of freight to London for clean being ¾d. in full, and for greasy, ½d. 12,195 of the new clip have been forwarded to London, against 10,242 during the corresponding period last season.

SOUTH AUSTRALIA, ADELAIDE, DECEMBER 4, 1869.

Little doing in cereals; wheat has fallen from 5s. 7d. to 4s. 3d. old for export, and 4s. 1d. for new. Small quantities only of the latter offering; the farmers hold back for the harvest. The total export during 1869 to 2d instant has been 38,269 tons of flour, and 193,093 qrs. wheat, together (at the rate of 45 bushels wheat to the ton of flour) 73,597 tons wheat and flour.

CAPE COLONY, PORT ELIZABETH, DECEMBER 14, 1869

The summer wool season is well advanced, and promises a liberal yield; the arrivals are increasing each week, about 6,000 bales received since 1st instant. The Government has issued a notice that tenders are required for £50,000, 4½ per cent. stock, chargeable on the general revenues of the colony. The weather has been favorable for the operations of the agriculturists and flockmasters

ARGENTINE CONFEDERATION, BUENOS AYRES, DECEMBER 12, 1869.

Business continues to improve. Wool is coming in. The census returns have been published.—Total population of the Republic, 1,780,043. The first census taken The influx of emigrants continues on a large scale.—From *S. W. Silver & Co.'s Circular, of January* 28, 1870

A CHAPTER ON DOGS.

WHY TOLERATE DOGS?

There was a time in our younger days, when we entertained a decided sentiment of fondness for dogs; and have sometimes had occasion to defend them from attacks which we then regarded as traducent. But some experiences have cured us of this sentiment. Three terrible cases of hydrophobia occurring last winter in our neighborhood, and those again reported the present winter in various parts of the country, have set us to thinking of the best remedy for this horrid human malady. Really valuable dogs are few and far between, and the trouble is, not that dogs exist as domestic animals, but that hordes of vicious, worthless brutes abound, that the dreaded disease is so frequent. Absolute extermination of the species, even if practicable, might not be wise, but the character and number of dogs might be profitably modified. This may be done by heavy taxation, and surely, the value of human life, and the harrowing features of hydrophobia in the human kind, would form ample warrants for the relentless operations of such a tax. The lives of two respected citizens of Camden county, N. J., have just been sacrificed by hydrophobia. Serious alarm prevails in various portions of the country from the occurrence of similar cases, and the public mind is, to some degree, exercised in seeking a remedy. We read in a recent issue of the *Philadelphia Press* an article urging the infliction of this tax in strong terms, a portion of which we present, as expressing our own views upon the subject: "If all the dogs in creation were gathered together, and any reasonable mortal were called upon to decide whether the whole batch were worth a human life, the verdict would unquestionably be in the negative. Even if all the good qualities of all the world's dogs were concentrated in one cur, he still would not be worth so much as the little finger of a human hand. Why tolerate the worthless quadrupeds, then? They are no manner of use anywhere, except on the Alps or amid the ice-fields of the North, and there only one species can survive. In the houses of this latitude they are a constant source of filth and danger. The more they are petted the more dangerous they become, for their familiarity disarms suspicion, and gives the opportunity to inflict the fatal wound in case they are envenomed. It is well settled that the bite of a dog may produce hydrophobia even though it has not manifested symptoms of rabies. The season of the year, or some peculiar constitutional condition of the animal, aside from atmospheric influence, may beget incipient rabies, and then even a casual scratch or playful bite will prove fatal to a human being.—Even if there be no danger from a laceration of the flesh by a dog, the alarm occasioned by a bite might, in very imaginative persons, superinduce hydrophobia. The fact is, no one is safe about premises where dogs are at liberty. If care were exercised in perpetuating improved breeds, there would be some excuse for having dogs about; but the worthless, cross-grained, mangy curs of every conceivable mixture, that are found about farm-houses and in our thoroughfares, are nuisances of the most odious kind. They are generally without decent dog-like proclivities, live by foraging like the hyena, afford no protection to man or property, make nightly raids upon neighboring sheep-pastures or neighboring yards; and, when full of poisonous blood, snap a master's hand so that he dies a thousand horrid deaths. There is but one way of abating the dog-nuisance. Tax them.—Make him who claims the privilege of assisting to kill his neighbor's sheep, or inflicting upon himself, family, or friend, an hydrophobia death, pay for it. We are aware that there is a doggish sentiment in the breast of some people that is hard to overcome; but it can be reached through the pocket. A dog that is not worth five dollars a year to his master is not fit to live; and this should be the minimum tax placed upon him."—*Journal of the Farm.*

WHAT THE ATLANTIC CABLES COST.

Exclusive of the two Atlantic cable companies, not less than ten submarine telegraph schemes, with a capital of $35 000,000, have been promoted or completed within a few months. The capital of the British Indian submarine telegraph from Suez to Aden and Bombay is alone put down at $19,000,000; the Falmouth, Malta, and Gibraltar line at $3,000,000; the West India and Panama line at $3,000,000; the British Indian extension from Ceylon to Singapore at $2,500,000; the China submarine telegraph at $4,000,000; the China and Japan extension of the Great Northern Telegraph at $3,500,000; and the Panama and South Pacific at $1,000,000. This wonderful activity is exciting some alarm lest the work be overdone, and the London *Economist* advises quiet people not to meddle with cable companies.

[It is the age of Progress. Cables and Railroads must progress, for men are not satisfied to move slow now;—stage-coach motion won't do. Ed. F.]

SENATOR COLE.

"*Opinions of the Press of California on Senator Cornelius Cole.*"

This is the title of a Pamphlet sent to us, we suppose, for an Editorial notice. We cheerfully give our opinion of the Pamphlet, the authors of it, and those papers which give currency to such shameful articles.

We presume those newspapers, in thus speaking, consider "All is fair in Politics," yet this is no excuse for thus striving to bring reproach upon one who may differ from them. We believe Senator Cole to be, in his acts, far superior to either the Journals that have assailed him. Our own opinion is, that any person who can find nothing better to do than to hunt up stale inuendoes, over a year old, against a State Senator, is liable to the charge of laboring to pull down one person, in order to build up another.

Who is the man these Journals would elevate to the seat now occupied by Senator Cole? and what plan have these Journals on foot by which *they* or their friends may be enriched?

Thank Heaven! this Journal has never yet descended into that filthy pool of Politics, where the eyes are so blinded to *Truth* or the *Good* in a man who may differ from us in Politics or Religion. The course pursued by many of our Political Journals is a disgrace to them and to humanity.

It is not to be supposed that any public man can please all; but there is a duty every Journal owes to the public, and that is, to treat with a decent respect all who differ from them, but the Pamphlet now before us shows only selfishness, spite, and spleen; but let such Journals beware how they handle Fire, and as they have ventured to take a *live* "*Cole*" in their hands, we feel confident they will *burn their own fingers*, and feel the *smart* for many years to come.

AGRICULTURAL NOTES.

A Pennsylvania farmer finds that he can keep horses fat and strong on rye-meal and rye-straw.

As agriculture progresses, we may note an advance in feeding from grass to roots, and from roots to oil-cake. The better the farming, the more fatty food for stock.

It is a very easy matter to start a few seeds in pots or boxes, and determine what proportion will grow, without running the risk of losing a crop in addition to the cost of preparing the soil and sowing.

As Dickens says he can always judge a hotel by its castor, so you can always judge a farmer by his gate; "and I have seen," remarks a recent traveler, "just three farm-gates in California for which I had any respect."

Sixty thousand small farms were last year added to our freeholds, double the number of the land-owners in England; and there are ten millions of foreigners working themselves up, peacefully and hopefully, into the grand, social amalgam and "Corinthian brass" of our population—one of the most noticeable facts, perhaps, of all human ethnology on record.

The following is a translation of a horse's petition to his driver: Up the hill, whip me not; down the hill, hurry me not; in the stable, forget me not; of hay and corn, rob me not; of clean water, stint me not; with sponge and brush, neglect me not; of soft dry bed, deprive me not; if sick or cold, chill me not; with bit and rein, oh! jerk me not; and when you are angry, strike me not.

OUR GRAIN CROP ON HAND.

A SHARP HIT AT THE HOLD OVER'S.

The *Commercial Herald and Market Review*, in its issue of March 4, has the following thrust at the Farmers that hold on to their crops. We endorse it fully, for we know many Farmers who have acted unwisely, and have experienced heavy losses thereby. Farmers, hear what the *Herald* says of you:

"Within the current week, our receipts of Wheat from the upper country have increased materially, and are the first fruits of the seasonable rains with which the State has recently been blessed. Streams long dried up have been greatly swollen and rendered navigable, so that steamers, with their barges, have been enabled to ply the upper waters tributary to the San Joaquin River, and thus, thousands of sacks of Wheat have been brought to market, much to the relief of those shippers whose vessels were waiting cargoes. It is impossible to state with any degree of accuracy, the amount of Wheat yet to come forward from the interior, as very much depends upon the ruling market.—Many of our farmers have become so wealthy as to be unwilling to sell their grain, unless at an exorbitant price, frequently holding on to their crops for years, hoping to obtain an exorbitant rate, selling only when it was found that the moths or weevils were eating out their substance. Examples of this nature are not uncommon in this State, as well as in Oregon, and it would be unnecessary for us to go back any considerable time to demonstrate fully the truth of our remarks—many of those farmers suffering grievously for their folly—and in their efforts to save themselves from loss and embarrassment, sought relief by shipments abroad, resulting finally, and in divers instances, in total loss."

BEET ROOT SLICED AND STRAW FOR CATTLE-FEEDING.

"We know," says a writer in the *d'Agriculture Pratique*, "that several attempts have been made to fatten cattle on sliced or cut raw beet-root mixed with straw. M. Valler and M. Gerard speak of it, but they apparently do not recognize the distinction between *raw* and *fermented beet*, and that the latter has a great superiority, and is more economical. M. Leduc (as stated in a note in our last number), has sought to obtain fermentation chiefly on a large scale, being convinced it was the only way to obtain cheap and healthy food.—He has made some experiments, and has always obtained the best results, since, with a crop of fifty hectares of beet-root, he has fattened such a number of sheep as would have required more than 150 hectares of ordinary fodder. We have followed these experiments of M. Leduc with great interest, and assisted in promulgation his discoveries. Now that experience has shown the success of his method, it appears to us of great interest to make it known, and furnish those who wish to try it, hints to guide them in its application.

"We are far from advising the beet-root distilleries and sugar factories to be shut, and beet-root employed solely for the fattening of cattle; but we are persuaded that the economical use of beet-root for the fattening of cattle, such as is practiced at Beaurevoir, would present very great advantages. We must always remember this truth, that sugar factories and distilleries do not increase indefinitely, and that if the manufactured article does not meet an extended consumption, it will be exposed to great and serious losses. The question will be more easily solved for those who are distant from all sugar factories, and who wish to feed a great number of cattle in order to obtain more manure. It will be interesting to find:

"1. That it is very easy to preserve beet-root in its ordinary condition for a whole year.

"2. That it may be preserved as surely and easily as pulp, the residue of the manufacture, and ordinary fodder.

"M. Leduc preserves his beets two ways, the one by steaming for winter, the other by fermentation for summer."

COATES BROTHERS' WOOL CIRCULAR.

Philadelphia, March 1st., 1870.

The past month opened with an active trade in Fleeces and Pulled—large amounts of the latter having changed hands, and all the shorter and inferior descriptions being sold by holders at good prices, principally to Eastern dealers—the demand being purely speculative. This has, however, left our market in a very healthy condition with regard to Pulled wools; and although the demand has slackened off somewhat, yet the stock now being produced is so desirable that manufacturers find it advantageous to use it, and holders have no trouble in selling at better rates than were ruling last month.

The demand for Fleeces has been spasmodic.—For a few days it seemed as if the price must certainly rule higher, and then again there would be almost no trade, and prices nominal. Holders, however, can now definitely see that stocks are very light in all the Eastern markets, and desirable lots are scarce. This fact has driven buyers to scour the country for any wools that could be picked up, and competition has run up the price in the West proportionately higher than in Eastern marts, so that there is now no margin for profit except on lots containing a fair proportion of combing. The problem as to whether there is wool enough to last to the next clip is now forcing itself on us, and as time elapses we see wool gradually appreciating, even in the face of a lower premium on gold and a dull dry-goods market.—This is occasioned partly by wool being as low a staple product as can be raised in the country, even at gold prices.

Tub wools are dull and lower in price.

Our own stock of all descriptions, though much reduced, still contains many desirable lots, which buyers will find it to their advantage to examine. These we are desirous of closing before any new wool comes to market, and will sell at corresponding prices.

The sales for the month, of Domestic Fleece, Tub-washed and Pulled Wools, foot up about 2,005,050 pounds within the range of 45 to 55 for Fleece, 47 to 58 for Tub-washed, and 35 to 44 for Pulled.

TUB-WASHED.	
Fine, well washed	$ 56 @ 58

Agriculture.

WHAT I KNOW OF FARMING.

BY HORACE GREELEY.

ESSAY NUMBER EIGHT.

GROWING TIMBER—TREE PLANTING.

In my judgement, the proportion of a small farm that should be permanently devoted to trees (other than fruit) is not less than one-fourth; while, of farms exceeding one hundred acres in area, that portion should be not less than one-third, and may often be profitably increased to one-half. I am thinking of such as are in good part superficially rugged and rocky, or sandy and sterile, such as New England, eastern New York, northern New Jersey, with both slopes of the Alleghanies, as well as the western third of our continent with a smaller proportion of timber in the Prairie States and the broad, fertile intervales which embosom most of our great rivers for at least a part of their course; but I doubt it. And there is scarcely a farm in the whole country, outside of the great primitive forests in which openings have but recently been made, in which some tree-planting is not urgently required.

"Too much land," you will hear assigned on every side as the reason for poor farming and meager crops. Ask an average farmer in New England, in Virginia, in Kentucky, or in Alabama, why the crops of his section are in the average no better, and the answer, three times in four, will be, "Our farmers have too much land"—that is, not too much absolutely, but too much relatively to their capital, stock, and general ability to till effectively. The habitual grower of poor crops will proffer this explanation quite as freely and frequently as his more thrifty neighbor. And what every one asserts must have a basis of truth.

Now, I do not mean to quarrel with the instinct which prompts my countrymen to buy and hold too much land. They feel, as I do, that land is still cheap almost anywhere in this country—cheap, if not in view of the income now derived from it, certainly in contemplation of the price it must soon command and the income it might, under better management, be made to yield. Under this conviction—or, if you please, impression—every one is intent on holding on to more land than he can profitably till, if not more than he can promptly pay for.

What I do object to is simply this—that thousands, who have more land than they have capital to work profitably, will persist in half tilling many acres, instead of thoroughly farming one-half or one-third so many, and getting the rest into wood as fast as may be. I am confident that two-thirds of all our farmers would improve their circumstances and increase their incomes by concentrating their efforts, their means, their fertilizers, upon half to two-thirds of the area they now skim and giving the residue back to timber growing.

In my own hilly, rocky, often boggy, Westchester—probably within six of being the oldest Agricultural County in the Union—I am confident that ten thousand acres might to-morrow be given back to forest with profit to the owners and advantage to all its inhabitants. It is a fruit growing, milk-producing, truck-farming county, closely adjoining the greatest city of the New World; hence, one wherein land can be cultivated as profitably as almost anywhere else—yet I am satisfied that half its surface may be more advantageously devoted to timber than to grass or tillage. Nay: I doubt that one acre in a hundred of rocky land—that is, land ribbed with rocks that the bar or the rock hook cannot lift from their beds, and which it will not as yet pay to blast—is now tilled to profit, or ever will be until it shall be found advisable to clear them utterly of stone breaking through or rising within two feet of the surface.—The time will doubtless arrive in which many fields will pay for clearing of stone that would not to day; these, I urge, should be given up to wood now, and kept wooded until the hour shall have struck for ridding them of every impediment to the steady progress of both the surface and the subsoil plow.

Were all the rocky crests and rugged acclivities of this County bounteously wooded once more, and kept so for a generation, our floods would be less injurious, our springs unfailing, and our streams more constant and equable: our blasts would be less bitter and our gales less destructive to fruit; we should have vastly more birds to delight us by their melody and aid us in our not very successful war with devouring insects; we should grow peaches, cherries, and other delicate fruits, which the violent caprices of our seasons, the remorseless devastations of our visible and invisible insect enemies, have all but annihilated; and we should keep more cows and make more milk on two-thirds of the land now devoted to grass than we actually do from the whole of it. And what is true of Westchester is measurably true of every rural county in the Union.

I have said that I believe in cutting trees as well as in growing them; I have not said, and do not mean to say, that I believe in cutting everything clean as you go. That was once proper in Westchester; it is still advisable in forest-covered regions, where the sun must be let in before crops can be grown; but, in nine cases out of ten, timber should be thinned or culled out rather than cut off; and, for every tree taken away, at least two should be planted or set out.

We have pretty well outgrown the folly of letting every apple tree bear such fruit as it will; though in the orchard of my father's little farm in Amherst, N. H., whereon I was born, no trees had ever been grafted when I bade adieu to it in 1826; and I presume none has been to this day. By this time, almost every farmer realizes that he can't afford to grow little, gnarly, villainously sour or detestably bitter-sweet apples, when, by duly setting a graft at a cost of two dimes, he makes that identical tree yield Greenings or Pippins at least as bounteously. I presume the cumulative experience of fifty or sixty generations of apple growers has ripened this conclusion. Why do they not infer readily and generally that growing different timber where the best and most valued grow as rapidly, is a stupid, costly blunder? It seems to me that whoever has attained the conviction that apple trees should be grafted ought to know that it is wasteful to grow Red Oak, Beech, White Maple, and Alder, where White Oak, Hickory, Locust, and White Pine, might be grown with equal facility, in equal luxuriance, provided the right seeds were planted, and a little pains taken to keep down, for a year or two the shoots spontaneously sent up by the wrong ones.

North of the Potomac and east of the Ohio, and (I presume) in limited districts elsewhere, rocky, sterile woodlands, costing $2 to $50 per acre according to location, etc., are to-day the cheapest property to be bought in the United States.—Even though nothing were done with them but keep out fire and cattle and let the young trees grow as they will, money can be more profitably and safely invested in lands covered by young timber than in anything else. The parent, who would invest a few thousands for the benefit of children or grandchildren still young, may buy woodlands which will be worth twenty times their present cost within the next twenty years. But better even than this would it be to buy up rocky, craggy, naked hill sides and eminences which have been pastured, and, shutting out cattle inflexibly, scratch these over with plow, mattock, hoe, or pick, as circumstances shall dictate, plant them thickly with Chestnut, Walnut, Hickory, White Oak, and the seeds of Locust and White Pine. I say Locust, though not yet certain that this tree must not be started in garden or nursery beds and transplanted when two or three years old, so puny and feeble is it at the outset, and so likely to be smothered under leaves or killed out by its more favored neighbors. I have experiments in progress not yet matured, which may shed light on this point before I finish these essays.

Plant thickly, and of diverse kinds, so as to cover the ground promptly and choke out weeds and shrubs, with full purposes to thin and prune as circumstances shall dictate.

Many farmers are averse to planting timber, because (they think) nothing can be realized therefrom for the next twenty or thirty years, which is as long as they expect to live. But this is a grave miscalculation. Let us suppose a rocky hilly pasture lot of ten or twenty acres rudely scratched over as I have suggested, and thickly seeded with hickory nuts and white oak acorns only: within five years, it will yield abundantly of hoop poles, though the better, more promising half be left to mature, as they should be; two years later, another and larger crop of hoop poles may be cut, still sparing the best; and thenceforth a valuable crop of timber may be taken from that land; for, if cut at the proper season, at least two thrifty sprouts will start from every stump; and so that wood will yield a clear income each year while its best trees are steadily growing and maturing. I do not advise restriction to those two species of timber; but I insist that a young plantation of forest trees may and should yield a clear income in every year after its fourth.

—But this paper grows too long, and I must postpone to the next my more especial suggestions to young farmers with regard to tree planting.

IMPROVEMENT OF STOCK.

At one of the meetings of the New York, State Agricultural Society, Judge H. T. Brooks gave his views upon the important subject of Stock raising, and urged its importance upon great moral grounds. His remarks are sound, and worthy of special regard.

We commend his remarks to the Stock raisers of California. The Judge thus speaks:

"A poor cow is good for nothing; she don't pay the cost of her keeping. A medium cow, like a politician or a game of chance, is doubtful. An extra cow is worth more than she ever costs. A very superior cow, that will make, as some do, over two pounds of butter a day, is a beneficent bequest that cannot be sufficiently prized. Her chief mission is the propagation of her species.—Whoever annihilates that class of animals, by destroying their offspring, commits a grave offence, and should be held responsible by the indignant judgement of the world. Good cows are benefactors of the human race. Do they not feed the hungry? Do they not minister to human necessities? Men who do so you call good and great.—What do you say of the cows? As we love them, and as we love our species, are we not morally obligated to do our best to multiply and extend them? Fortunately our facilities for the improvement of stock are almost unbounded. The extraordinary qualities of superior animals may soon reappear in a countless progeny, if we have the discretion to make the most of them by judiciously crossing them upon the very best we can obtain. Take Mr. Hammond's famous sheep, Sweepstakes; his lineal descendants, if all used for breeding till the fifth generation, might count over fifty millions, or about twice the entire number of sheep now in the United States; and yet, the venerable Vermont patriarch, the father of the whole line, would be but ten years old! The same might be true of any meritorious and vigorous bovine. With such facilities for the spread of good blood and good qualities, it is a crime against civilization and society to breed from the miserable apologies for domestic animals prevalent in farmers' yards, while beauty, strength, docility, and fleetness are hurried prematurely to towns and public works, leaving no representatives behind. Too late we hear lamentations about these matters. People often speak now-days admiringly and deploringly of the "Messenger" horse. After doing an incalculable service, their good qualities have been frittered away by foolish crosses with flashy, unsubstantial stock. It is notorious that our roadsters lack strength and endurance, worth all the "two-seventeens" you could crowd into space. It has been claimed by those who ought to know, that imported Messenger was worth to the United States a hundred million of dollars.—However that may be, if he had been seasonably appreciated, the very best selections made for him and all his meritorious male and female offspring held sacred for breeding purposes, his services would have been a hundred-fold more valuable.—Long before this, every horse in the United States might boast his descent from the splendid, fleet, and powerful animal sent to us from Britain in 1788. Remember, then, never to use any animal for breeding when a better one can be obtained.—You are not working for yourselves merely; the results are not confined to one generation. As a breeder you are improving or deteriorating what belongs to those who come after you. If every father transmits to his sons better stock than he received, there is no standard of excellence that may not be reached. We have no business to set bounds to progress in any direction. Within my recollection, the sheep of my town have doubled their yield of cleansed wool, to say nothing of avoirdupois weight. Does anybody suppose that sheep improvement is necessarily confined to the middle of the nineteenth century? Excelsior should be the motto of every age. With a definite end in view, with a knowledge of means and appliances, discreetly employing suitable varieties of food, in quantities that strengthen and expand the organs, giving proper attention to air and exercise, and all the conditions of healthy and harmonious development, improvement will be certain and satisfactory.

Farms and Ranches,

—AND—

LANDED ESTATES FOR SALE,

Now that we have so many new settlers of the better class coming to our State, those who have

FARMS, IMPROVED HOMESTEADS,

LANDS, RANCHES, &C.,

Should now make them known extensively, and in no way can they do it more effectually than by

ADVERTISING IN THE FARMER,

As we are now sending to thousands of readers in the other States, as well as at Home, our JOURNAL, the advertisements appearing in our columns will be read in all the principal Merchant's Exchanges in the Eastern States and Europe, as well in the best private Reading Rooms and Libraries of the United States.

Advertisers will be wise that consult our columns.

☞ One thing is certain:—No disreputable Advertisements can appear in our Journal. 33-1

(Successor to TESSMORE MAYES,)

DEALER IN

FRESH AND SALT FISH,

—101 & 102—

CALIFORNIA MARKET, SAN FRANCISCO.

Shipping, Restaurants, Hotels and Families supplied at Short Notice, and on the most REASONABLE TERMS

TYPE FOR SALE.

The Type which now prints the FARMER will be offered for sale, as we intend to print on NEW CALIFORNIA TYPE.

The quality of the Type can be seen by reading the FARMER. Any one wishing a good bargain can have one by calling at once at our office, or addressing EDITOR FARMER.

Miscellaneous.

OIL CAKE MEAL

THE BEST FEED KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal, and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent, Barley Meal, 13 per cent, Oat Meal, 18 per cent; Oil Cake Meal, 22 9-10 per cent. For life-sustaining properties to all stock are -ed to sudden changes of weather or over-driving! Is no equal

For MILCH COWS particularly valuable, increasing the quantity of milk and giving its quality to a far greater extent than any feed known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food; generally mixed with the mash of bran, slops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair.

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($35 per ton,) it is the cheapest feed in market. It is now selling in New York at $42 per ton, gold; at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

For our time, examinations, correspondence, shall expect a compensation that will repay

Horticulture.

BLACK LOCUST AND OSAGE ORANGE SEED.

In your Nov. 4th number, a subscriber from Cynthiana asks if Black Locust can be raised from seed. In reply I will say, we in Illinois procured seed from Kentucky, and in that way introduced them here, and but for the "Borer" raising many groves, would have been well supplied. As it is, in our city we have trees 40 to 50 feet high that escaped their ravages. Gather the seed at any time after ripening (even through the winter,) about April or May, or rather so soon as vegetation is springing up; take your seed and put it in a common earthen crock, fill the crock nearly full of boiling water, set it aside and let it cool. Pour off the water and repeat the process again. When cool, plant the seed in a light bud, and they will come up as soon as common garden products—try part of them (if you choose) in water not quite at the boiling point. I take Osage Orange seed and put in water nearly boiling and repeat it a second time, and then keep it near a fire or stove, being particular to change the water about milk-warm every other day afternoon to prevent it souring, and in the course of a week they will show sprouts or swell (if good seed), and you can plant immediately or put them in some mould and keep them damp until they sprout.

For Larch and Cedar, I think it best to put them in ley-water for some days, and when soft rub them in a sieve to take the gluten off the seed — *Farmer's Home Journal.*

THE COLORING MATTER IN FLOWERS.

According to M. Morat, the coloring matter of flowers consists, first, of cyanine, or a blue pigment; second, a pink or rose-colored matter, in reality identical with the first, and only altered by an acidity of the juice; third, two yellow-colored matters—xanthine insoluble in water, and xanthine soluble in that liquid. Cyanine is best prepared from the petals of violets or iris flowers by means of boiling alcohol a blue solution is obtained, which soon turns brown, but is restored to its primitive color by being shaken up in contact with air. In order to obtain the coloring matter in a pure state, the alcoholic solution is evaporated to dryness in a water-bath, and the residue taken up with water, wherein the blue pigment is soluble, while fatty matter and resin are left behind; the aqueous solution is precipitated by means of acetate of lead; the ensuing green-colored precipitate is decomposed by sulphuretted hydrogen, filtered and washed; afterwards the filtrate is evaporated to dryness in a water-bath: the residue is exhausted with absolute alcohol, and the cyanine precipitated from its solution therein by means of ether. Cyanine does not crystallize, is soluble in water and alcohol and insoluble in ether; acids turn it red, and alkalies green; it is a very sensitive re agent for both.

VALUABLE PLANTS FOR SALE.

☞ Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and to so cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, to gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us. WARREN & CO.,
tf Farmer Office.

BOUND VOLUMES FARMER

☞ Volumes of the "California Farmer" for The last EIGHT YEARS, uniformly bound, can be had at the Farmer Office at $8 per Volume.

These Eight Volumes contain more useful matter touching the practical workings of Agriculture as adapted to California Culture than any Book or Books Extant, as they comprise hundreds of Experiments, Letters and Essays upon the Culture of Cotton, Rice, Coffee and Tobacco; Grapes, Strawberries, and all other Fruits, with the Culture of Hops, Castor Beans, Flax, Hemp, &c. and the Whole series of Essays of L. Prevost on Silk Culture, from early beginning.

This set of Volumes would be a Library of itself and is valuable to the Cultivator of the Soil.

Orders sent to Farmer Office will be promptly attended to

Advertising Abroad!

WE CALL THE SPECIAL ATTENTION OF ALL Manufacturers, Agricultural Men, Nurserymen, Booksellers, and others having interests connected with the PACIFIC COAST, that now is the time to secure the business of this region by wisely ADVERTISING WITH US.

The full effects of the completion of that Grandest of all HUMAN ENTERPRISES, the PACIFIC RAILROAD, must open a large and wonderfully increased business between the Eastern States and the Pacific Coast, and they who wisely ADVERTISE NOW, will be the FIRST TO SECURE IT; and when once secured, they can HOLD ON TO IT.

We therefore invite all those who have valuable IMPLEMENTS, MANUFACTURES, INVENTIONS, BOOKS, PAINTINGS, etc. to the Columns of the CALIFORNIA FARMER, that will give them a wider circulation than any other medium they can adopt.

WARREN & CO., Eds. and Prop's.

Garden, Field, Grass, Bird and Flower Seeds, Guano Bone Dust, and other Fertilizers. Trees, Shrubs, Plants, Roots, Etc. 4.

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING MARCH, 10., 1870.

THE CALIFORNIA FARMER READING ROOM, AND MUSEUM OF NATURAL HISTORY.

320 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER OFFICE are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING.

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion, twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SAMPLE COPIES.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination, hoping our paper will meet their approval and induce them to subscribe, and to ask their neighbors to subscribe also.

Send for Sample Papers and get up a club. Address

PUBLISHER CALIFORNIA FARMER,
San Francisco, Cal.

Editor's Chair.

We ask the reading of several important articles in our Agricultural Department this week.

We commend to our readers the Lines by "Zora." The *Mother* speaks here.

Our Farmer readers should be sure and read every one of the Horace Greeley "Essays," now re-published by us every week. There are good practical lessons which must be really beneficial to all who read with a *desire* to be benefitted.

We ask the attention of those who wish a pretty "Rural Home" in the Mountains, to the advertisement in our columns—that speaks a chance that is rarely found. Purchasers in want should hurry up.

We call attention to the advertisement of the "Cameron House," for sale at Santa Clara. This is one of the best Hotel Stands in our State. Situated in a populous region of country, in the hands of an energetic man a fortune can be made easily in a few years.

Acknowledgements.

Articles Received at the California Farmer Exhibition Rooms, No. 320 Clay Street.

BOOKS AND PAMPHLETS RECEIVED.

The following were received this week too late for review:

The Technologist.—Devoted to Engineering, Manufacturing and Building. A most valuable publication.

Fowler's Phrenological Journal.—A Monthly of value.

The Mississippi Agriculturist.—A Monthly, published at Meridan, Mississippi.

The American Naturalist.—Published by the Peabody Academy of Science.

The Observer.—A Monthly Review of Banking, Railways, etc. Published at Chicago.

Parry's Fruit Catalogue.—Of Cinnaminson, New Jersey.

Transactions of the California State Agricultural Society.—Kindly sent us by Hon. S. H. Rogers, Speaker of Assembly, for which we return thanks.

All the above will have full notice another week.

THE PREVOST FUND.

The Committee of the Prevost Fund would respectfully invite all the friends of the late Louis Prevost—the PIONEER OF SERICICULTURE—to forward to them such contributions as they are disposed to make to this Fund; and it is to be hoped that those Journals over this coast that have always spoken so kindly of this most-worthy Pioneer, will present this matter to their readers, and thus enable the Committee to carry out the plans designed for the Widow, and erect a suitable Testimonial to the Memory of Louis Prevost.

Contributions can be sent to the Treasurer—Judge D. S. Payne, San Jose; Hentsch and Berton, Bankers, San Francisco; CALIFORNIA FARMER Office, San Francisco.

At an early day the contributors will be invited to meet and arrange the disposition of the Funds that shall be raised.

HAYING SEASON NEAR AT HAND.

Although the trees are but now bursting into bloom, yet the grass is growing rapidly, and our haymakers can almost see it grow.

We desire to call special attention to the Machinery which Messrs. Marcus C. Hawley and Co. offer to our Haymakers and Harvesters. These are very popular Machines, and in a few days we shall present Illustrations of them, so as to show *how they look*—as everybody knows they *work* most capitally.

THE OPENING SEASON.

The careful reader of the general leading newspapers must have observed how changed the tone within the last few weeks.

Where are all the starved Cattle and Sheep? Where the ruined Crops? Where are the many Farmers that were about selling out and leaving various places, that were ruined by the drouth?

Read the same Journals six and eight weeks since, and read them now; what a change! The dying Cattle of the first date are now chewing their cud, sleek and fat; the Sheep are with their lambs; and the dry and withered Crops are changed to a very healthy and thrifty growth, and promise a goodly harvest.

And why this change? Simply, the latter rains came in due season to stop the mouths of the thoughtless and ungrateful;—those who are ever ready to complain, but rarely ever manifest a due sense of thankfulness or gratitude for blessings continually received.

It is an admitted fact, we believe, that our Farmers, as a mass, are more ready to see the cloud than to greet the sunshine; ever ready to murmur when the seasons don't please them, and seldom ready to acknowledge the great blessings our climate, soil and seasons afford them, so far above that enjoyed by other States

Now, the second week in March, the Pear, Plum and Cherry trees are putting on their flowery robes, and sending forth the sweet aroma of their blossoms; the hills are richly robed in velvet-green, while many hill-sides and valleys are brilliant with the flowers of Spring.

For sixteen years we have noted the seasons as a Journalist, but never before have we met with such a season of rapid and healthy advancement of everything in Field and Garden. The prospect is great—the promise sure, and for such blessings let the warmest sentiments of gratitude rise to the "Giver of all Good," for these many and rich favors.

PUTTING IN SEED.

In the planting of all seed the earth should be in good condition to receive the seed, else damage is received by the opening germ from which it never fully recovers; from the largest kind of seed among the cereals which can endure the roughest exposure to the most minute. The condition of the earth when the seed is deposited fixes its fate and marks the grand result of blooming, or seed time.

From the Grain field to the Garden, particularly where the finest flowers are to grow, the soil should be the nursing mother of the germ that is to make the new life, and unless this bed or cradle of its infancy is what it should be, unless the earth is cultivated deep and fine, so that the sun can penetrate it and make it warm, and draw up from below the moisture to nourish and swell that germ and assist at its early development, a check is given which it never afterwards can recover from.

Great blame is often laid at the door of the seed grower and seller for poor seed, when the real cause of the failure is caused by the coarse or wet condition of the soil, and especially *minute* seeds are placed in soil so coarse and untilled that corn would hardly vegitate.

In the garden the soil should be made deep and fine, the nearer it resembles coarse meal the better, but all small seeds should be sown in boxes or pots and transplanted carefully. Many cultivators of Garden grounds injure them by too free use of water. A deep and thorough cultivation will produce moisture, drawn up by the suns heat from below, far better and more nourishing to the plants than all the water that could be put upon the surface soil. What is needed upon the plants is only gentle syringing upon the foliage to keep the leaves clean, they being the lungs of the plant, and unless clean, must perish.

Too much attention cannot be given to good cultivation and constant care, a well cultivated garden is a "beauty spot" in life's pathway, while a neglected garden is only an indication of sloth, idleness and neglect.

THE RAINS.

What a lesson the late rains teach the doubting Farmer! How ready they always are to complain, —how slack to acknowledge blessings!

We have never doubted on this subject; we believed, and have continually asserted in this Journal, for months, that we should have *Rain enough*; and the past week, while in San Jose, we met many Farmers who, when we spoke of *more* rains, said, "Oh! no more, no more; we have plenty."

This truth is established by the laws of Nature, that where the area of country that is well cultivated is large, there the rains will be more copious—there the atmosphere will be continually moist. Continued Cultivation *produces* moisture, and when the now waste *down South*, or any section of our State, now untouched, shall be put under a good Cultivation—Orchards and Vineyards planted, with well-improved Rural Homes, with their Gardens—there will the rains come, and there will crops prosper. Read what Horace Greeley says, in this number, on trees and their influence. Every observing mind will find this to be true, and the present year will witness more genial showers in Summer than ever before.

The Cultivator of the soil must remember that *Cultivation produces moisture.* Cultivation is *better* than irrigation, always.

MUSIC

"Technical Studies for the Voice" is the name of a piece or scale of studies for the Student, prepared expressly for use at the San Francisco Musical Institute, by Frederic Lyster, Esq., and published by Mr. Gray, Esq, Music Publisher of this City, to whom we are indebted for a copy.

This is a valuable composition, and should be in the hands of every person who desires to cultivate the voice correctly.

FAREWELL BENEFIT OF OLE BULL.

Agreeable to the notice in the Journals of the day, the "Testimonial Benefit" tendered to this truly illustrious man, took place at Platts Hall last Friday Evening, the 4th of March.

The presence of one of the best and most fashionable audiences of the season must have been truly gratifying to this most distinguished Artist. It was a crowded house, and among the audience could be seen our most intelligent and our best citizens.

It would be superfluous to say the Concert was a musical success, each Artist seemed inspired to do their best. Ole Bull surpassed all his former efforts in delicacy of touch, in sweetness of expression and in perfection in every peice, winning most rapturous applause, earnest and heartfelt.

Miss. Hattie Safford surpassed all her former songs, giving a pathos, a sweetness and brilliancy that made even her own beautiful face more beautiful, and winning most enthusiastic applause.—Her beautiful countenance and graceful form, as well as her lady like deportment, will long be remembered among the many friends she made wherever she appeared.

Mr. Hoffmans performance as a Pianist, have rarely been equalled, his superior playing called forth loud applause.

Mr. McDonald by his superior voice and excellent style of singing, received justly merited encores, again and again.

The sisters Laemlein, who had kindly volunteered their valuable assistance in honor of Ole Bull, and for their high esteem for his noble character, won great applause by their very superior and artistic performance, several peices being warmely encored.

The entire Concert was a grand success, and one long to be remembered.

At the close of the performance George C. Johnson Esq., the Consul General of Norway, came upon the stage and introduced Gen. Cobb, upon whom was conferred the duty of officiating in the presentation

Gen. Cobb waved his hand and two colored men came in bearing upon a cushion the splendid wreath which was to be presented to Ole Bull, then another wave and Ole Bull came in attended by a beautiful young Norwegian Lady, who was to crown the recipient of this token.

Gen. Cobb then read the address which we append, when the young Lady modestly and gracefully placed the wreath upon the noble Norwegians brow.

MR. OLE BULL.

At the request of many of your countrymen, headed by our esteemed friend, General Johnson, Consul General of Norway, and a host of American citizens, I am called on to do you homage; hence gladly I greet you, monarch in the realms of music: for who, that has listened to the strains, thrilling, soothing, inspiring and subduing by turns, would deny that the spirit calling forth such strains is monarch in the world of its own creating. Of all the muses, is it not the muse of music that touches the deepest feeling of the human heart? Is it not music that fires the soul of the soldier to the noblest acts of valor? On going back in history as far as legend, even, "from which history springs," we find the pretty fable of Orpheus with his lyre, enchanting not only the children of the earth, but those of Pluto's regions. Again, Orion, it is said, lured the Dolphin from the depths of the sea by the magic sound he drew from his harp. Hence it is clear that in all climes and among all nations, where heroic deeds and grand acts have been achieved, we will find that music and poetry have lived in the hearts of the people. Thrice hail, then, to one whose cunning hand draws for us—not the wild fanatic visions of a fevered brain, but dreams and pictures like unto the scenes that arise before us, whilst perusing the grand old rages of the master's native land.

It is not alone Norwegians, your countrymen, who welcome and do you honor, but also our American population desire to greet and assure you of their deep appreciation of your talent and of your truly disinterested munificence, by your many acts of generosity, thus uniting with them in placing on the brow of genius, Oh, Master, a crown of Fame, and we trust of immortality.

Ole Bull, with his usual graceful dignity, bowed and received the Testimonial Gift with emotion.

The weight of this crown seemed to oppress him he felt a *crown* of Gold even, and set with Jewels, to heavy for a "son of Liberty" to wear, and soon laid it upon the Piano, and in reply to the address, expressed himself most happily and gracefully to the audience.

The wreath presented was indeed a beautiful and fitting Testimonial to one so truly worthy as Ole Bull.

The form of the wreath was in true artistic taste, of solid gold, crescent form, representing a wreath of laurel leaves, each leaf of which there were thirty-six, tipped with a pearl, the centre forming a coat of arms of California, with (O B.) in diamonds underneath.

This rich and valuable token of remembrance was enclosed in a Morocco Case with a gold plate on which was inscribed these words.

"To Ole Bull, from his California Friends, as a slight token of their affectionate regards.

San Francisco, Cal., March 4, 1870."

The presentation eve was a most fitting one, being the anniversary of the day when our PRESIDENTS are made.

The presentation and his speech ended, before he retired he slexed his wonderful Violin and drew from it such strains of melody as no other mortal creature could draw, this drew forth a most rapturous applause.

This was his last, his Farewell strain,
Such as we may never hear again,
It breathed from his heart in Friendship and love,
And seemed like sweet music from Heaven above,
He bade us farewell, but in memory yet
We will cherish the Friend, *we can never forget.*

THE RAILROAD TARIFF.

While it may be all right and proper to *Legislate* upon Railroad Fares and Freght, it is to be sincerely hoped that, whatever legislation is had, it may be freed from all local or partizan feeling or influence.

We think, now that the Railroad interest is progressing so favorably, and while the Public have the fullest assurance that the leading and most influential men connected with Railroad interests, are men of known, high Public spirit; men who have, in reality, acted with a true sense of right towards the great traveling public, and the interest of Shippers of Freight. We mean the President and Directors of the Central and Western Pacific Railroad,—men who will undoubtedly control many other lines also; while the people see continual proof that these Managers *do* act with a liberal spirit, and are rapidly promoting and developing the great interests of the country, *we* think it would be very unwise to do aught that should hinder the progress of our Railroads, or dampen their zeal in these great Public Enterprises

If Legislators must take up these matters,—if they sincerely believe Legislation necessary, if the cry of monopolies or high Tariffs have been so often sounded in their ears that they think the matter must be looked into,—then, in Heaven's name, for the sake of our State and her true interests, let such Committees as shall have these matters committed to them, be men of comprehensive, practical knowledge and ability; men that can justly review the trials and struggles through which the creators of these great roads have passed, carefully review that path, and, with a Prophet's ken, look well to the future and the good that is in store for our State, by means of our Railroads, before they do aught that shall impede the progress or hinder the developing of the rich resources that would have been forever hidden, but for these very Railroads that are now but making their infant struggles to get upon their feet and go alone.

Wise Legislation is a blessing; but local, partial, personal or partisan scheming is, and has been, the great hindrance to the prosperity of every State and people under Heaven.

We hope the present Legislature will act wisely in the matter of Railroads and Railroad Fares.

FLAX-GROWING

Where are our Farmers that have good Flax lands, that they do not plant largely with Flax? The Seed is much wanted here at the Linseed Oil Works, and the Cotton Mills at Brooklyn will take the straw, and both will pay.

Oregon has gone largely into Flax-growing, and they will do well. We are obliged to import cargoes of Flax-seed, when it could be raised here better, more plump, and cheaper than it could be imported.

It is *not too late* to plant yet: all this month will do. Our fine alluvial lands—land left in Summer fallow, and other deep moist lands,—will grow Flax well. Will not our Farmers try the crop?

THE CASTOR BEAN.

Thus far, all who have raised the Castor Bean —who have given it proper care and attention, have made it a very profitable crop.

It should be borne in mind that the *large* Bean does not open freely; the small Illinois bean opens without trouble and is easily gathered.

There is a market now for all that can be raised, and there should be no delay in planting. If there were *one thousand acres* planted now, in addition to all that has been planted, there is a ready market for the crop.

The Linseed Oil Company, of this City, are ready and liberal to promote this interest.

FARMER'S CLUB CORN.

We have received from our kind correspondent at Mariposa, a parcel of the "Buckland" *Sweet Corn*, known as the "Farmer's Club Corn;"—a most valuable New Variety. The same week we imported some of the same kind, so that now we can furnish to those who desire it, parcels of the same, in packets of 25c. and 50c., mailed free to order. Address FARMER OFFICE.

EARLY PREPARATION FOR HARVEST.

It will be seen by the large advertisement of Messrs. Treadwell and Co., that this Pioneer Warehouse is now prepared to furnish our Grain Harvesters with the Best and Most Complete Header and Harvester ever yet offered, as the result of man's genius, skill and ingenuity.

This wonderful Labor-saving Machine should receive special attention from our Grain growers. By a reference to this Grand Implement it will be seen that the Machine can be changed to suit the ground, and work to be done without stopping—thus a great saving of time and cost is gained.

Farmers should carefully note other Machines in the same advertisement of this Extensive Agricultural Warehouse.

SUNKEN LAKE.

The great natural curiosity known as Sunken Lake, is situated in the Cascade mountains, about seventy-five miles northeast of Jacksonville, Oregon. The walls are two thousand feet high, and almost perpendicular, running down into the water and leaving no beach. The depth is unknown, the surface is smooth and unruffled, and it lies so far below the surface of the mountain that the air currents do not affect it. Its length is estimated at twelve miles, and its breadth at ten. No living man has, it is said, ever reached the water's edge. The lake lies "silent, still, and mysterious in the bosom of the everlasting hills, like a huge well scooped out by hands of genii."

ORANGES.

Oranges are very plenty at Los Angeles, this year. They hardly pay for the gathering, as the price falls very low.

MURDERS AND ASSASSINATIONS

The great "King of Kings" hath, in the table of his law, commanded that thou shalt do no murder; wilt thou then spurn at His edict, and fulfill a man's?

What must strangers from abroad, who are now filling our hotels, think, when they take up our morning papers, and there read the *daily* accounts of murders and assassinations which are taking place in our midst. These records are a foul disgrace to our City Government, for if we had a truly wise and energetic Government,—if the Fathers of our City would look where these daily murders are committed, they would, or *ought* to take measures to put a stop to the Wholesale Butcheries.

What is the purpose of our Churches, our Sabbath, our Young Men's Christian Associations, but to raise the moral standard of men, and purify the Community from Crime, Sin, and Wickedness? And yet, while Churches are multiplied, School Houses increased, and daily gatherings for prayer are held at these places of Christian reformation —Murders increase, Crime flourishes, life and property are more in danger, and the scenes witnessed in our streets, day and night, by the increase of low Drinking Saloons and Dance Cellars, bring a stigma upon the *Authorities* and the *name* and *fame* of our City and its inhabitants.

This subject is one we regret to touch upon, but as a Citizen and a Journalist—as one that can claim to have endeavored to *build up* our *City* and *State* in all her *Industrial Interests* especially, we feel that *these interests* can be of little avail while Murder and Crime are permitted to run rampant in our midst.

How shall these terrible Evils be stayed? How shall we stop the flow of Blood—How stop the increase of Crime?

From whence come these streams of blood? From whence come quarrels, fighting, brawls and violence, but from the low drinking saloons that are so thickly scattered over our City, and from the *dance* cellars—these holes under ground where temptation lies in wait to seduce and destroy?

But are not these places *Legalized*—are they not *permitted* by authority? Our City Licenses the very places where most of these murders originate—Can nothing be done to stay these blood stains upon our City's fair name?

Shall we receive into our Treasury the price of Blood? If such places *must* be Licensed, in Heaven's and Humanity's name, let such a price upon their business be demanded that some compensation be returned to our City for the cost of Police Officers, Courts, Juries, Jails, Prisons, etc., else the world will laugh at us for taking *Blood-money* and paying out *Ten* Dollars for *One* received!

The simple truth is clearly shown;—the cause of Crime proceeds from these *sources of Crime*, and our Authorities should visit these placesand see the *young men* and *boys* that nightly flock to these Dance Cellars, to their ruin, and the disgrace and degradation of our City.

Now, in view of these facts, if there is one duty above all others that belongs to the "Young Men's Christian Association" to perform it is to try and save the *Young Men of our City* and Young men from the Country, who visit our City, from being ruined and destroyed in the Pest Houses of this City.

MORTALITY AMONG CHILDREN.

The constant, steady, great mortality among little children in our City, should certainly awaken public attention to the matter, and the cause should be ferreted out and a remedy applied.

We, ourselves, feel convinced a stop could be put to one-quarter, if not one-half, of these fatal cases. One cause of so many deaths among our children arises from *diseased Parents*, a violation of physiological creation, another, neglect and exposure; but one of the great causes is want of some Nutrition, and of this is the fearfully POOR MILK fed to the children of our City, from Cows fed with *Brewery Slops*. This is a matter that should be looked into, and not delayed, for children are thus slain by scores every month.

GRAND DRY GOODS BAZAAR.

At the head of Montgomery Street and Market a visitor to our City has a fine Panoramic View of a fashionable part of our City. Up and down Market Street the cars come from all quarters, and through the leading streets of our City, bringing the vast amount of business done in a Metropolitan City.

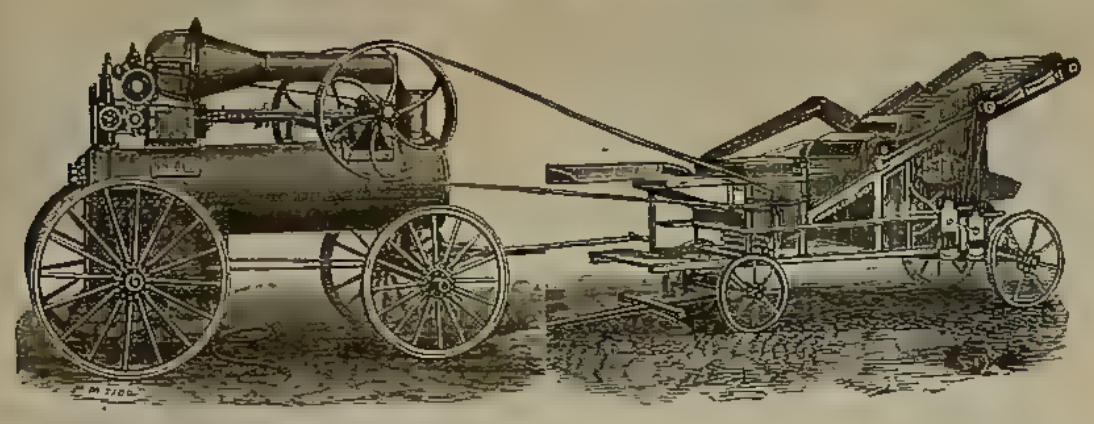
At the head and centre of Montgomery Street stands the new GRAND HOTEL, soon to be opened —probably one of the finest Hotels, when finished in our country.

From this grand centre, down Montgomery Street, one of the finest Stores seen, and most conspicuously, too, is that of Messrs. Eyre, Byrne and Co., one of the largest and most extensive and complete in all that comprises a GRAND DRY GOODS ESTABLISHMENT, of any Warehouse on this coast—complete in all the various departments, from the most rich and costly Silk, Shawls, and Dress Goods to the articles of practical utility in the Household.

This establishment is conducted on the *one price* system, and with attentive and courteous salesmen, Ladies can be waited upon promptly, yet never urged to purchase, and the goods sold are always the best and at the lowest rates. The House is one of the best Houses in our City or State, and long years of business have made it one of the most popular.

We find, in a French journal, the following dialogue between two married ladies: "My dear, the first months after my wedding I was on my knees before my husband from morning to eve—my life was a perpetual adoration, an incessant delight, an inexpressible felicity. I overwhelmed him with caresses; I think I could have eaten him." "And now?" "Now, I am right sorry that I didn't."

"HOADLEY" "RUSSELL!"



HOADLEY'S IMPROVED THRESHING ENGINES!!

RUSSELL'S IMPROVED SEPARATORS!!

CONSTITUTING PERFECTION IN THRESHING GRAIN!!!

THESE MACHINES are now so completely constructed as to render them the very "NE PLUS ULTRA" of ENGINES and SEPARATORS for the Farming community of California.

THE ATTENTION of the FARMING community and the public generally is called to the GREAT IMPROVEMENTS on the above make of Engines and Separators, which are surpassed by none for threshing grain, and are specially adapted to the use of Farmers.

Improvements on Russell's Separator.

THE SEPARATOR has been increased six inches in width, the sieves being much enlarged, to correspond; the 33 inch Cylinder now having a 40 inch Sieve, being six inches larger than the old style; and the 36 inch Cylinder Sieve has been increased six inches, and is now 48 inches, which greatly enhances the capacity of the Machines.

HAINES' HEADERS

With Doane's Adjustable Reel.

IN OFFERING these SUPERIOR HEADERS to the Farming Community of California, we can safely say that we have now brought the HEADING MACHINE to as near perfection as is possible.

THE MOST USEFUL IMPROVEMENT YET MADE!

WHICH is a simple arrangement for Raising and Lowering the Reel some 18 inches, so as to enable the REEL to reach lodged grain, different lengths of stalks, and to be used in windy weather without stopping the Machine, and the consequent loss of time and labor in adjusting the old style Stationary Reel, which took some FIFTEEN MINUTES. The belts are always of the right length, and you can adjust the Reel to any grain with the greatest ease,

AND WITHOUT LOSING A MINUTE'S TIME!

THE GREAT point in our New Headers will commend itself to all purchasers, and no other Headers will be used when the great merits of this improvement are known.

CAUTION.

ALL PERSONS are Cautioned not to infringe upon our Patent Adjustable Reel Headers, as they will be prosecuted.

FOR SALE BY OWNER OF PATENT AND MANUFACTURER.

WOODS Improved Prize Mower—Folding Bar: As now made, this is the best and Cheapest MOWER used on the Pacific Coast.
KIRBY SELF RAKE REAPER, is unsurpassable in its work.
KIRBY MOWERS—two Sizes, Greatly Improved.
HEADER WAGONS—Thimble Skein, with and without fifth wheel, do., do., with Screw Hubs,—Mill Machinery, Engines, and Agricultural Implements, Hardware, Pipe and Nails.

NEW AGRICULTURAL BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz.: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY cuts in those parts needing such illustration; so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

THE FIELD AND GARDEN VEGETABLES OF AMERICA By Fearing Burr. Containing descriptions of all Vegetables, their different species and varieties grown in this country, with full illustrations of them.....Price $5 00

THE GARDEN VEGETABLES OF AMERICA. By Fearing Burr.....Price $2 50

CULTIVATION OF THE GRAPE. By W. C. Strong, of the Nonantum Hill Nurseries, Brighton. A complete guide to Grape Cultivation.....Price $3 00

FLOWERS FOR THE PARLOR AND GARDEN. By Edward Sprague Rand, Jr. Beautifully illustrated.—Price.....$3 00

THE BOOK OF ROSES. By Francis Parkman. Containing all known Roses, with directions for the cultivation of all varieties worth growing. Beautifully illustrated.....Price $3 00

GARDEN FLOWERS AND HOW TO CULTIVATE THEM. By Edward Sprague Rand. With complete descriptions of all hardy and out door Plants, Trees and Shrubs.....Price $3 00

THE PARLOR GARDENER. A Treatise on in-door Plants. By Cornelia J. Randolph.....Price $1 00

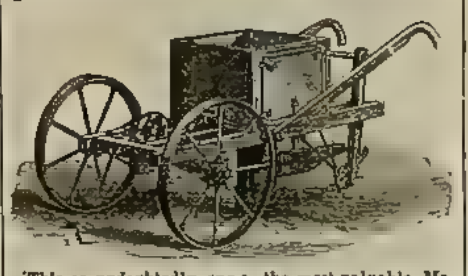
Book of Fruits—by Baker.....$1 50

The above are all New Works, or New Editions, of the most Valuable Works, and published in the best style.

For Sale at the FARMER Office.

32-6 WARREN & CO.

TRUE'S IMPROVED POTATO PLANTER.



This is, undoubtedly, one of the most valuable Machines adapted to Agricultural purposes ever introduced

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such sized slices as the farmer may prefer; drops those pieces with the most perfect regularity, and covers them perfectly, and does all this as fast as a horse can walk over any ground that can be plowed

No intelligent farmer can ... see that an implement with which one man can, with the aid of a horse plant six acres of potatoes in a day, is of inestimable value because the days in which PLANTING can properly be done are very few, while he has all SUMMER and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attending to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor-Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune with it.

Particulars and Catalogues can be had at our office.

WARREN & CO.,

320 Clay street, up stairs.

A Bargain!

Fine Homestead on the Mountains!!

A very fine COTTAGE HOME, in Eldorado County, containing Twenty Acres of Choice Land, pleasantly situated, and with pleasant surroundings.

A handsome Cottage House of Five Rooms on the first floor, and Two above, with every convenient arrangement for Family Comfort—Closets, Bath-room, Cellar under house, etc.

The outbuildings are, a good Carriage House, Wood shed, Chicken House, etc.

A Vineyard of Five Acres, Six and Eight-yrs from which 1,500 Gallons of Wine have been Year

A good Orchard of 500 Trees, Five to Seven Years Old, all Good Varieties of Fruit. The Eleven Acres' balance of Land is best for Orchard, Vineyard, or Garden Cultivation.

There is any quantity of "Uncle Sam's" land, of Best Quality, that can be had at Settler's Prices.

The House is nicely furnished, and, to a person of taste, this place can be made a "little Paradise"

The House and Grounds will be sold a GREAT BARGAIN, if applied for immediately, and will be sold for Less than the Cost of the Buildings!

[For the CALIFORNIA FARMER.]

TO IDA HALL.

BY IONA.

Four-year-old IDA, "queen of the May,"
With eyes like the raven's dark hue,
Sweet as the odors of new-mown hay,
Or daisies low-drooping with dew;
Hair like the moonbeams woven with gold,
And cheeks where the roses oft creep,
Dimples that tell of kisses untold,
By angels, when all are asleep.

How Aunty loves her fairy-like ways,
And each cunning word as it flows
From coral lips, like sapphyrs at play
With the clouds where the sunset glows.
Emblem of hope when Winter has gone,
And singing the brooklets dance by,
Giving us strength to echo the song
That's sung by the seraphs on high.

Mother, 'tis just a *loan* from above—
This frail little star-gem of thine;
Treasure it *rightly*—guard it with love,
And brighter the jewel will shine.
Oh! guide the footsteps gently with care,
Nor once for a moment delay:
Think of the *Home* where glad sisters fair
Are waiting to call her away.

"Of such is the kingdom of Heaven,"
That float to the land of the blest—
Where God in His glory has given
A place for "the weary to rest.
Let IDA, dear, ever remember,
As years on to womanhood roll,
That no breath of snow-clad December,
From *Mother* o'er chilled her young soul.

THE FUTURE.

BY H. H. HILL.

What may we take into the vast Forever?
That marble door
Admits no fruit of all our long endeavor,
No fame-wreathed crown we wore,
No garnered lore.

What can we bear beyond the unknown portal?
No gold, no gains
Of all our toiling; in the life immortal
No hoarded wealth remains,
Nor gilds, nor stains.

Naked from out that far abyss behind us
We entered here:
No word came with our coming, to remind us
What wondrous world was near,
No hope, no fear.

Into the silent, starless night before us
Naked we glide:
No hand has mapped the constellations o'er us,
No comrade at our side,
No chart, no guide.

Yet fearless towards that midnight, black and hollow,
Our footsteps fare;
The beckoning of a Father's hand we follow,
His love alone is there,
No curse, no care.

TEA AND COFFEE.

Hall's *Journal of Health* says: "Taking into account the habits of the people, tea and coffee for supper and breakfast add to human health and life, if a single cup be taken at either meal, and is never increased in strength, frequency or quantity. If they were mere stimulants, and were taken thus in moderation and with uniformity, they would in time become inert, or the system would become so habituated to their employment as to remain in the same relative position to them as if they had never been used; and consequently, as to themselves they had better never have been used, as they are liable to abuse. But science and fact unite in declaring them to be nutritious as well as stimulant; hence they will do a new good to the system every day to the end of life, just as bread and fruits do; hence we never get tired of either. But the use of bread and fruits is daily abused by multitudes, and dyspepsia and cholera morbus results; yet we ought to forego the use of tea and coffee, because their inordinate use gives neuralgia and other ailments. But the habitual use of tea and coffee, at the last and first meals of the day, has another high advantage—is productive of incalculable good in the way of averting evils.

We will drink at our meals, and if we do not drink these, we will drink what is worse—cold water, milk or alcoholic mixtures. The regular use of these last will lead the young to drunkenness, the considerable employment of simple milk at meals, by sedentary people—by all, except the robust—will either constipate, or render bilious; while cold water largely used, that especially in cold weather, attracts to itself so much of the heat of the system, in raising said water to the temperature of the body—about one hundred degrees—that the process of digestion is arrested; in the meanwhile, giving rise to a deathly sickness of the stomach, to twisting pains, to vomiting, purging, and even to cramps."

Said an ambitious youth of Millersburgh to a lady, the other day: "Don't you think I had better dye my moustache?" at the same time caressing the infant prodigy. "I think," replied the lady, "if you will let it alone, it will die itself."

"Come, darling, it is bed-time. All the little chickens have gone to bed." "Yes, mamma, so has the old hen."

WHY USE SPECTACLES?

With most persons, there is an epoch in life when the eyes become slightly flattened. It arises probably, from a diminished activity of the secreting vessels. The consequence is that the globe is not kept quite as completely distended with fluids as in youth and middle age. There is thus an elongated axis of vision. A book is held farther off to be read. Finally, becoming more flattened by the same inactivity within, the difficulty is met by putting on convex glasses. This is the waning vision of age. If, however, when that advancing imperfection is first realized, the individual persists in the attempt to keep the book in the old focus of vision—even if he reads under perplexing disadvantages, never relaxing, but perseveringly producing just as he did when his eyes were in the meridian of their perfection, the slank vessels will at last come up to his assistance, and the original focal distance will be re-established.

This statement will unquestionably be combated energetically by those who use glasses. But it will be a waste of forensic powder, because the fact is established beyond cavil. We do not pretend it will be successful in every instance; but generally, if glasses are once resorted to, then the opportunity of doing without them is forever lost.

Very aged men may be noticed reading fine print; and ladies, too, by scores, who resisted glasses at the age of life referred to who enjoy all the comfort of distinct vision, and they will, until, like the deacon's chaise, every stick in the vehicle falls to pieces at the same time.

Therefore, begin with a firm resolution never to use glasses of any kind, for reading or writing.—The ancients knew nothing about such contrivances; if they had, there would have been poor eyes in abundance, and oculists to meet the emergency. Cicero never complained of imperfect vision at the age of sixty-three. He even wrote his last letter by torchlight, on the eve of being put to death by the waiting soldiers. Humboldt died at ninety-two, having never been embarrassed with those modern contrivances, lunettes. John Quincy Adams, illustrious for scholarship, at a ripe old age saw without them. Indeed, it would be a laborious enterprise to collect a catalogue of names in the chronicle of literary fame, of men and women, who were independent of glasses.—*Dr. J. V. C. Smith*

TRASHY BOYS.

How to keep the rising generation of boys under a whole discipline is a question which is just now taking the wits of parents and teachers. The boy of the period certainly has a licence and a liberty of action which his father never had. He runs in the streets, chooses his own associates, worries his sisters, plays truant, harrasses his teachers, and indulges in many dissipations and vices on the sly, and yet his back and the calves of his legs are innocent of birch. He has an accumulated store of back rations which he has never drawn and often deserves. His father controles him but little, his mother indulges him, and the teacher reaps the benefit of his bad temper, ill manners and spoilt tantrums. So young hopeful progresses. Some day he behaves outrageously, and then comes the question, who is to punish him? If the teacher does, ever so mildly, and although the boy deserves more than he gets, the young hypocrite runs home whining and whimpering about having been beaten, and blubbers to his mother about his undeserved punishment.—Then comes a scene between the parent and teacher, and all about this little reprobate who has probably not got half what he deserves. The question is, what's to be done? Why, this: when a boy does anything mean, false, or dirty, let him be soundly thrashed in the presence of the school or dismissed. We shall have all the better generation of men in forty years, if the rod, instead of being put away to rust, is taken down and used wisely and efficiently.

We copy the above article from one of our exchanges, for at this time our city is much excited by a case of whipping in school, and while we are *opposed* to corporeal punishment by a Teacher, we think the error lies at *Home*. Some children are a disgrace to a school, one scabby sheep affects the whole flock. If pupils will not obey dismiss them from the school. [Ed. F

"HUMAN NATUR'."

Old master Brown brought his ferule down,
His face was angry and red;
"Anthony Blair, go sit you there,
Among the girls," he said.

So Anthony Blair, with a mortified air,
And his head hung down on his breast,
Went right away and sat all day
By the girl who loved him best.

DELUSIONS OF GIRLHOOD.

The following is a bit of Fanny Fern's experience:

I used to believe in school friendship. That illusion ended when Arabella Triplet told mutual friends that I was years and years her senior, knowing what a dreadful fib she told.

I used to suffer pangs of anger because of woes of beggars. Since that I have seen one unstrap his wooden leg in an area, and run off gaily on two legs of his own. Another threw a loaf of bread in the gutter, and I saw a third, who had all day been yelling, "Please assist the blind,' carefully examining his collection of ten-cent stamps by the light of a friendly apple-woman's candle.

I used to put the greatest faith in lovers' vows. Now, I do not believe a man ever believes anything he says to a woman, unless it is something disagreeable.

I used to believe in faithful servants. Since then I have hired girls from intelligence offices, and lost all my pocket-handkerchiefs but one.

I used to believe in beauty. Since then I have seen a bewitching belle take off half of her hair, all her teeth the best of her complexion, two pounds of cotton batting, and a corset.

AFTER.

After the shower the tranquil sun;
After the mow the emerald leaves;
Silver stars when the day is done;
After the harvest, golden sheaves.

After the clouds, the violet sky;
After the tempest, the lull of the waves,
Quiet woods when the winds go by;
After the battle, peaceful graves.

After the knell, the wedding bells;
After the bud, the radiant rose;
Joyful greetings from sad farewells;
After our weeping, sweet repose.

After the burden, the blissful meed;
After the flight, the downy nest;
After the furrow, the waking seed;
After the shadowy river—rest!

DOMESTIC RECIPES.

SMOTHERED APPLES.

Peel and core a dozen apples or more, and put them into a pan, with sufficient sugar and water to make syrup to serve them with. Cover tightly, and place over the fire till a straw will penetrate them. Eat when cold.

WELSH RABBIT.

The following will be new to many; it will be found very palatable: Take a quarter of a pound of good fresh cheese, (a solid piece the size of a large teacup,) cut it up in small thin slices, and put in a frying-pan, with a little over a copful of sweet milk. Have previously beaten an egg, stir that in, then add half a salt-spoonful of dry mustard, two dashes of red pepper, and a small piece of butter, stirring the mixture all the time. Have ready rolled three small or two large crackers, and gradually stir them in; as soon as this is thoroughly incorporated, turn the mixture out into a heated dish and cover it.

REST.

Leisure is never so enjoyable as when it comes unexpectedly, like the visit of a long-absent friend. And to be sweet it must be short. Too much of it palls upon the appetite. Luxurious as a warm bath, it is also enervating. He who finds himself suddenly possessed of leisure in great plenty will do well to dispose of the bulk of it as soon as possible, by setting himself something serious to do. Systematized activity is one of the best preservatives against "dull care." Leisure is but a sauce of life, which helps to make work more palpable and digestible,—the one apart from the other soon becomes disgusting. Men of leisure, as they are called, are most commonly restless, fidgety and unhappy men. The kindest thing which can be done to them is to deprive them of the greater part of their leisure. At first sight it does not seem so; but a very short experience will prove that is so. Much leisure infers the absence of a purpose; and life without a purpose is a perpetual burden.

TIGHT-LACING A BENEFIT.

A learned doctor, referring to tight-lacing, avers that it is a positive benefit, inasmuch as it kills all the *foolish girls*, and leaves all the wise ones to grow up to be women.

A case in point: A girl in Chester, Vt., died recently from tight-lacing. For several months previous to her death, this wretched victim to a foolish fashion was compelled to sleep with her corsets on, and strung up to their utmost power, as by loosening, great pains rose internally, and no relief but by compression. Was such a woman fit for a wife or mother? Better out of the world than in it! Here is one cause of puny children who die in infancy.

Miscellany.

A SUBTERRANEAN VOYAGE.

The Story of a West Virginia Plowman—He Breaks Through the Crust of the Earth—Falls into a Subterranean River—Six Miles in Forty-eight Hours.

When we were publishing a paper in Lewisburg, West Virginia, several years ago, a very singular accident befel a young man there, which we narrated briefly at the time. A few days ago we chanced to meet him here in Muskegon, and he narrated his adventure at our request. It occurred on the farm of General A. W. G. Davis, in Greenbrier county, in 1856. We give his story in his own words, as near as we can recollect them:

"I was ploughing on Gen. Davis's farm in 1856," said he, "unsuspicious of being on insecure ground, when suddenly the earth seemed to fall beneath me. I saw the horses descending, but was too frightened to let go the plough handles. The pitch of the horses with the earth gave my fall an impetus, and somehow I caught the mane of one of them in my fall, and so held on instinctively. What I thought when falling I can hardly tell; at any rate I did some rapid thinking. When I landed I fell on the horse whose mane I had hold of, and although the horse was instantly killed, I was merely stunned and confused. On recovering myself I looked up, and the hole through which I had fallen looked so small I concluded I must have fallen 150 feet. My first thought was to call for aid, but I instantly recalled the fact that I was at least a mile from Gen. Davis's house, and that there was not the remotest probability that any one had seen my descent into the earth.

It was then early morning, and as I had brought out my dinner with me, no one would miss me before nightfall. While going over these facts in my own mind, I heard the rush of water near at hand, and it occurred to me that I must have fallen upon the bed of Sinking creek, which, as you know, falls into the earth above Frankfort, and does not come out but once till it reaches the banks of the Greenbrier river. To say where I was, or to attempt to follow the subterranean passage, was the next question. I sometimes took the team to my own tenant stables, and therefore might not be missed for days; so I determined to follow the stream. I waded in it, and, judging from its depth of from one to three feet, I concluded it must be the identical Sinking creek spoken of. Leaving my dead companion behind me, I followed the stream. For the most part I had pretty easy work of it, but sometimes I came to a deep place, where I was forced to swim for a considerable distance; again was often precipitated headlong into deep water by the precipitous nature of the rocky bed of the stream.

Talk about the darkness of the grave! The grave itself could not have been more impalpably dark than the passage I was following. The occasional rippling of the waters was an inexpressively dear sound to my ears. Day and night were the same to me. At last, wearied with my efforts, I laid down on a comparatively dry rock to rest, and must have slept for hours. When I awoke again I took to the water, carefully ascertaining which way it ran, so as not to lose my labor by retracing my steps. It seemed to me that the farther I went the more difficult progress became. When I had gone perhaps a mile, I came to a place where the archway narrowed so much that I had to crawl on my hands and knees in the water.

Here was a dilemma I had not looked for. I tried either bank of the river, but found no passage. I could swim under water for a considerable distance, but the distance before me was unknown, and I halted long before making the dangerous venture. At last I concluded that my fate was equally doubtless in returning as in proceeding, and plunged boldly into the current, and soon found that it was so swift in its confined passage that I only needed to hold my breath to go through. In the course of twenty or thirty feet I again got my head above water, and took a long breathing spell. Again the archway above seemed to enlarge and the bed of the stream became more even. I sped along comparatively rapidly, keeping my hands outstretched to prevent my running against the jagged rocks. Wearied out, I again laid down and slept soundly in my wet clothes.

On awakening, I pursued my course down the subterranean stream, and at last, in the long distance ahead, saw a glimmer that looked very bright in the darkness I was then shut in. Nearing this, I found that it did not increase in brightness, and when I had gone perhaps a mile, I came to another place where my path narrowed to the very tunnel filled by the water. My case had now become more desperate; I could not possibly retrace my steps, so I submitted myself to the current, and was immeasurably overjoyed to find myself rapidly swept into daylight. Exhausted and half drowned, I crept out upon the land, and was not long in recognizing the objects about me. I had come out into the Greenbrier river, as I knew from the familiar look of Gen. Davis's mill on the bank. On reaching home I found that I had been over forty-eight hours in making my perilous journey of six miles underground."

This singular story we copy from the *Muskegan* (Michigan) *Enterprise*, which thus speaks of this strange place:

"The hole where this man went through is now fenced round. On listening, one can plainly hear the rush of water below, and a stone thrown down will sometimes be heard to splash in the stream."

All parcels should be carefully done up and sealed.

TECHNICALITIES

I once heard a pretty good thing in the Supreme Judicial Court at Portland. The case was one of severe assault upon the first officer of a Yankee barque, by one of the crew, which assault occurred on shore. Judge S. was called upon the bench. He was a very small man; very neat in dress, and very fastidious; resting firmly upon his judicial dignity; a first-class lawyer, and withal inclined to be self-sufficient and crusty. No attorney at the bar ever ventured to take liberties with Judge S.

The principal witness in the present case was an old weather-beaten sailor, named Jack Miller. Now, Jack was called to testify against his shipmate, as he had witnessed the assault, and had interfered to terminate it; but he was anxious to tell as little against his chum as possible, and, furthermore, to soften down and excuse what he did tell; and this led him to be a little rambling in his testimony. The Judge had been making notes with his pencil, and as Jack was wandering off into an unnecessary explanation, he lifted his head, and, evidently forgetting for the moment the exact standing of the witness, with his mind partially upon the notes, he testily exclaimed—

"Come, witness—*ad rem, ad probosibum!* Don't wander so."

The witness stopped and looked up at the Judge wonderingly. He repeated the abstruse words to himself as nearly as he could pronounce them, and then, with earnest simplicity, asked—

"Yer honor, what does them words mean?"

"Never mind, never mind," returned the Judge, with a wave of the hand. "They are technical terms, used in law, not for men in your position to understand."

There was a titter in the court-room as poor Jack turned, rather crestfallen, back to the examining counsel. Pretty soon the witness sought to explain that his shipmate, when he made the assault, was not himself. Said he, half to the counsel, and half to the jury—

"Tom was pooly hard for it. He'd spliced the main-brace, an' doubled the tub, an' tapped the admiral more'n—

The little smooth head of Judge S. bobbed up at this point.

"Stop, witness; I don't comprehend. What do you mean by 'doubling the tub,' 'tapping the admiral,' and the other equally ambiguous expressions?"

Jack's eyes snapped just a single spark, and then his face was calm and serene as the bark of an old gnarled oak.

"Why, yer honor," he replied, with patronizing respect and deference, "them's technical terms used on ship board, which it aren't expected 'at men in yer honor's position would understand."

While his honor was subsiding, a titter broke loose in the court-room, which would have swelled to a roar if the sheriff had not sternly bitten his lip and loudly commanded "order."

PLAGUE OF MICE.

We are familiar, in this country, with the plague of grasshoppers, army worms, and other noxious animals, but have happily been spared from the devastations caused by mice in large bodies, such as not unfrequently have ravaged portions of Europe. Quite recently certain parts of Hungary have been terribly afflicted in this manner, to so great an extent, indeed, that in a single district the entire crop of sixty thousand acres of grain was completely consumed. In another district ten thousand acres were destroyed in two weeks, not a grain, nor blade of straw, nor root being left—entire fields having been cleared, according to the statement, "as bare as a floor."

Many attempt made to reduce the hordes of these animals failed. Ditches were dug and filled with water; but they soon became choked up with the dead bodies, the number destroyed counted by hundreds of thousands, and yet without any appreciable impression being made upon the supply. The country was filled with immense numbers of hawks, eagles, owls, and other predaceous birds, together with foxes, weasels, wild-cats, etc.; but the devastation still continues, and there is no telling where it will end.—*Harper's Magazine* for March.

PHYSICAL CONDITION OF MARS.

A pamphlet by Mr. Proctor, a well-known astronomer, written to accompany some recent stereograms of Mars, calls attention anew to the very great similarity between this planet and our own earth in many points of its extraordinary physical condition, and infers, as has been before suggested, its entire adaptation to the requirements of living creatures such as those that now people the earth. The polar ice can readily be distinguished, extending its borders in the winter and contracting in the summer. An atmosphere, carrying clouds, and mists with definite qualities, is readily appreciable; and the indications of rain and snow are not wanting. How soon it will be possible for us to determine the nature of the inhabitants of the planet—since we can scarcely refuse to believe in their existance—is yet a matter of uncertainty; but it is to be hoped that the time is not very far distant when we may arrive at some definite conclusions in regard to them.—*Harper's Magazine* for March.

THE HEART TRANSPIERCED BY A NEEDLE.

Prof. Biffi at a meeting of the Milan Institute, presented the heart of a Lunatic who had died in consequence of gangrene of the tongue which had supervened upon a bite which he had inflicted upon it during a maniacal paroxysm. At the autopsy a needle six centimetres in length was found in the left ventricle, its point, after perforating the valve, penetrating to the extent of one centimetre and a half into the left article. On inquiry being made, it was ascertained that the lunatic, twenty-two months prior to his death, had announced to his relatives that he had forced a needle into his heart; but little attention was paid to his statement especially as no symptoms of any disorder in the chest manifested themselves, the pulse during all this time, too, being quite regular in its beats. Full details of the case are shortly to be published.—*Gaz. Med. Italiana-Lombardia*, Oct. 16.

HUCKS & LAMBERTS'
CELEBRATED PATENT
H.&L.
AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attach as to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Comb, or Gum:

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

Hucks
Lamberts

Is on the red cover of the packages

Railroad Lands.

CENTRAL PACIFIC RAILROAD,
LAND DEPARTMENT.

Sacramento, March 1st, 1867.

The following statement is made for the information of those who desire to purchase Lands from said Company:

1st. Congress has granted to the Company, all the alternate sections of the public lands designated by odd numbers, within a distance of 20 miles on each side of the railroad;—excepting lands to which a pre-emption or homestead claim had attached prior to the 12th of September, 1862, and excepting lands reserved by the United States as mineral.

2d. The Company has no interest in even sections. To constitute a valid pre-emption or homestead claim within the above exception, the party must have resided on the land prior to September 12th, 1862, and continuously since that time. He must also on that day have been over twenty-one years of age and be the head of a family and have filed his claim in the United States Land Office within the time required by law. If he has not these requisites, or has neglected to file, he will have to buy of the Railroad Company.

3d. All persons who desire to purchase lands from the Railroad Company, including settlers, pre emptors, and other claimants, should make application to the Land Agent, B. B. Redding, at the Land Office of the Company, in Sacramento, either personally or by letter, describing the land by legal subdivisions. This application will be filed and the party will be allowed three months to complete the purchase, and during this time the land will not be sold to another without giving such applicant thirty days previous notice. If the purchase is not completed within three months, the land will be open to purchase by others.

4th. Persons who have valid pre-emption or homestead claims to any tract on an odd numbered section, can purchase the same from the Railroad Company at the Government price of $2.50 per acre in greenbacks, and upon the usual credit of five years if they so desire, by filing an abandonment of their claim in the U. S. Land Office, blanks for which will be furnished by the Land Agent of the Company. Such purchase from the Company has these advantages over a purchase from the Government: The party can leave the land if necessary—he can sell or mortgage it—he is saved the payment of lawyers' fees and expenses of witnesses to go to the Land Office to "prove up" his claim—he can get his title perfected in less time—and he can buy on credit at a low rate of interest.

5th. Actual occupants of lands belonging to the Company, will generally have a preference in the purchase at the regular price. No addition to the price is made where there are improvements on the land made by the settler. Where there are conflicting claimants who apply to purchase, an adjudication of their respective claims will be made by the Land Agent, upon due notice given to both parties.

6th. No lands are sold by the Company or the Government, until after they have been surveyed and the plats returned to the Land Office.

7th. The Company sells ordinary agricultural lands at $2 50 per acre, in gold (except sales to pre-emptors as above). Timber lands, lands in the immediate vicinity of the railroad, and tracts having special value above ordinary farming lands, will be sold at prices and on terms fixed by the Board of Directors.

8th. Persons desiring to do so can buy on a credit of five years by paying twenty per cent. of the price down, and interest annually in advance on the remainder at ten per cent. per annum. Thus a purchaser of one hundred and sixty acres at $2 50, which amounts to four hundred dollars, will pay twenty per cent., or eighty dollars, with interest on three hundred and twenty dollars, which is thirty-two dollars—in all one hundred and twelve dollars, paying each year thereafter thirty-two dollars interest, and the three hundred and twenty dollars at the end of five years. His three hundred and twenty dollars can be paid at any time within the five years, but not by installments, and the purchaser will then be immediately entitled to a deed

9th. Applications to purchase lands can be filed in the Land Office of the Company at any time after the same have been surveyed by the Government; but no applications will be acted upon until three months after the maps have been filed in the United States Land Office. Occupants of the railroad lands who desire to purchase should therefore be prompt in filing their applications in the office of the Company within this time. Blank applications will be furnished to all who desire to purchase. No sales will be made except by legal subdivisions according to Government surveys. Purchasers can buy as large an amount of land as they may wish.

10th. No sales are made by the Company until the land is listed over to it by United States Land Officers. Purchasers are thus assured that the title they obtain is perfect.

B. B. REDDING,
Land Agent C. P. R. R. Co., Sacramento.

THE LAWS OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.

2. If subscribers wish their papers discontinued, publishers may continue to send them until all charges are paid.

3. If subscribers *neglect* or *refuse* to take their papers from the office or place to which they are sent, they are *held responsible* until they *settle* their bills and give notice to discontinue them

4. If subscribers move to other places without informing the publisher, and the paper is sent to the former direction, they are held responsible.—Notice should always be given of removal.

5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is *prima facie* evidence of intentional fraud.

Postmasters would oblige by a strict fulfillment of the regulations requiring them to notify publishers, once in three months, of papers not taken from their office by subscribers.

Under the law of Congress, papers are not charged postage in the county in which they are published.

Produce Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer on the wharf or landing places.

Corrected Weekly, by Editor Farmer.]

GRAIN AND FLOUR MARKET.

San Francisco, March, 10.

Our Grain Market is steady in value, but more grain coming in. The late rains and the rise of the rivers, and the now certainty of a large and prosperous harvest the present year, induces the bringing forward stocks of grain that otherwise would have been held back.

It is to be hoped that every Farmer will send forward his grain, and send it abroad as fast as possible, and thus bring back its value to our State and thus aid the work of a Resumption of Specie Payment, which is near at hand.

Resumption will help the Farmer, therefore they must help Resumption.

The late and continued rains have put the living green upon the grain crop, and our grain growers everywhere feel happy about it.

Barley, Oats, and all grain used in feed is in ample supply—prices merely nominal.

Potatoes that rose like bread puffed up by yeast, have fallen and heavy again.

Hides and Tallow in demand beyond the supply.

The Sheep shearing season is near at hand—the sheep men are packing their bags, and as the market is bare of wool and the clip promising to be a good one, sheep men look for a better price than in 1869.

The Dairy is softening down, the large increase of Butter brings the price down so low that Dairymen are purchasing their butter, believing it will pay better to send away a half than to sell now. A year or two and we need import no more Butter.

Cheese of best quality is in demand—scarce and fair price.

Eggs, abundant and low.

Our exports of produce now and for a little time have been small, comparatively—dull markets prevail abroad as well as at home.

Dairy—Butter, Cheese, Eggs etc.

The Dairy market has had a fall. Prices of Butter and Eggs have *melted*, and *broken* away, and run down in the scale of prices. This is just what this Journal has all along predicted, for by reason of too high rates here we have induced large shipments from abroad; the result has been a loss to the producer here, by such a plan.

PREMIUMS.

The Early Rose Potato.

The wonderful celebrity which is now being attained by the unprecedented excellence of the "Early Rose Potatoe," its great productiveness beyond that of any other potatoe known, its early maturity (7, 8 and 9 weeks) surpassing all others, and its great superiority in *quality*, induces us to try to spread its culture as widely as possible.

We therefore will now offer to every *new subscriber* to the California Farmer, from the commencement of our new Volume, Four pounds of the "Early Rose Potatoe," mailed to them *free of cost*, as a Premium for 1870. This will give them seed for another year, equal to 200 to 300 lbs.

P. S. All new subscribers to our present Volume who kindly sent their names before this, if they will send us word they will use this seed they shall have the parcel mailed to them free.

Shade Trees! Shade Trees!!

ORNAMENTAL & SHADE TREES

LARGE COLLECTION OF TREES.

EXTRA SIZE SHADE TREES.

Elm and Ash Trees.

A splendid lot of very choice and large size ELM and ASH Trees, for PUBLIC SQARES, and STREETS, will be offered in Lots to suit Purchasers

Mulberry Trees.

Large size Mulberry Trees, White, Red, and MORUS MULTICAULIS, of all sizes, suitable for planting out as Shade or Ornamental Trees, and also as Fruit Bearing, or for feeding the Silk Worm.

The Mulberry Tree makes a handsome Shade Tree, and is an Ornamental and Fruit Tree combined.

These Trees will be sold in lots to suit purchasers.

OSAGE ORANGE TREES.

A few lots of Osage Orange Trees for setting out as Ornamental Trees. Also

SILK WORM EGGS

Of the French Annual Species, for sale.

The above will be sold on the best of terms.

P. S.—Orders addressed to A. P. Smith, will be promptly attended to.

Sample Trees can be seen at the FARMER OFFICE, where information of the quality of the Trees and the price can be had.

A. P. SMITH.

Of the well known Smith's Gardens,

Sacramento City, Cal.

COMMISSION SALES-ROOM — AND — Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc Orders should include satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns, and which we have the exclusive sale for this Coast.

We also call attention to the

NEW GATE.

A most valuable invention, particularly to Farmers and Stock Raisers. County Rights for sale.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

The following are the kind of Goods imported or consigned to us for sale and which can be offered on the most favorable terms:

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence. In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown.

FINEST MIXED LAWN GRASSES,
FINEST MIXED GRASSES FOR PERMANENT PASTURES.
FINEST MIXED GRASSES FOR SHEEP-WALKS
FINEST MIXED GRASSES FOR MEADOW-LAND.
PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALPALPA OR CHILI CLOVER,
KENTUCKY BLUE GRASS.
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental

TREE SEEDS.

TOBACCO SEED,
COTTON SEED,
COFFEE SEED,
TEA SEED.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

These will be ready in the months of November and December.

Collections can be forwarded by post at the following rates:

50 Packets choicest and best				$10 00
25	do	do	do	5 00
12	do	do	do	3 00
50 Packets Good Selected				6 00
25	do	do	do	3 00
12	do	do	do	1 50

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference

Silk Culture:

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

FLOWERING BULBS.

Lilies, Tulips, Hyacinths, Amaryllis, Anemones Ranunculus, Narcissus, Tuberoses, Peony. Roots, Crocus, Snow-Drops, Very Choice Gladioli,

Choice collections of Flowering Bulbs, comprising all the most showy and leading varieties from $5 00 and upwards.

EVERGREEN AND DECIDUOUS SHRUBS,

ORNAMENTAL TREES.

FRUIT TREES.

The newest and most approved sorts:

Peaches, Figs,
Plums, Almonds,
Cherries, Walnuts,
Apricots, Nectarines,
Pears, Grapes,
Apples, Etc. Etc.

Also the best varieties of Strawberries, Raspberries, Gooseberries, Currants, and Blackberries.

PERPETUAL FLOWERING ROSES

Of the best kinds.

GREENHOUSE AND BEDDING PLANTS.

Any one desirous of having their Gardens look gay through out the season, can be furnished with the plants at a reasonable rate, by applying at this office.

Every information given as to the cultivation of Plants and raising of Seeds, etc. Also respecting the mode and best system of Pruning all varieties of Trees, etc.

Gardens and Grounds designed and put in order, and every article furnished for same.

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference

Farmers' Headquarters. 320 Clay Street, up-stairs.

SPLENDID PREMIUMS!! 1870!

OUR SEVENTEENTH YEAR AND THIRTY THIRD VOLUME OF THE

"California Farmer."

With the New Volume in January we begin the Seventeenth Year of Labor with this Journal

THE CALIFORNIA FARMER PREMIUMS.

The CALIFORNIA FARMER will club with the following Magazines and Journals, and furnish them for the year 1870 at the following rates.

The New York Independent,

PREMIUM ENGRAVINGS.

The California Farmer and the Independent both for $7 50, and to present them with Richie's splendid steel engravings of Grant and Colfax, the price of which is $2 each, thus giving them these two Splendid and Popular Pictures worth $4, and both these Papers for $7 50

The CALIFORNIA FARMER and the New York Christian Union, new series, Edited by Rev. Henry Ward Beecher, $7 50

The CALIFORNIA FARMER and the Harper's Monthly, Weekly and Bazar, $14 00

The CALIFORNIA FARMER and either of Harper's Magazines delivered post paid $3 50

The CALIFORNIA FARMER and the New York Weekly Tribune, $6 50

The CALIFORNIA FARMER and the American Agriculturist, $6 00

The CALIFORNIA FARMER and the New York Monthly Horticulturist with extra Steel Engravings of "Country Life," $7 00

The CALIFORNIA FARMER and the Rhrenological Journal of New York now in its 50th Volume, $7 00

The CALIFORNIA FARMER and the American Stock Journal, $5 50

We shall add others with our next issue.

Any other Journal or Periodical desired we will furnish with the FARMER on the most liberal terms when desired.

The Terms of the Farmer will remain the same—$5 per year, $3 for six months, (gold price) and $1 extra when payments have been delayed and these terms are unchangeable. A liberal allowance for clubs; when five copies are paid for, six copies will be furnished.

We call attention to the Premiums offered, and the Union of other Journals with ours.

WARREN & CO., Editors and Publishers,
320 *Clay St.*, San Francisco.

REASONS WHY EVERY FARMER AND STOCK-RAISER SHOULD TAKE THE "CALIFORNIA FARMER."

1st. Every Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State.

2d. Every such person should give his sanction and support, generously and voluntarily to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefitted* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and the Stock-raiser will always be better advised of the markets, and the kind of information so important to his interests by constant access to a "Home Journal."

6th. The *California Farmer* has faithfully advocated the best interests of the Farmer and Stock-raiser for sixteen years steadily and is the only *Agricultural Journal in California.*

7th. The *California Farmer* contains the most important information relative to these interests in every branch of Agricultural science.

8th. The *California Farmer* contains the announcement of all New Seeds, Grains, Grasses, etc. together with all New Implements that advance the cause of the cultivators of the soil.

9th. The *California Farmer* contains the announcement and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Agriculture.

10th. The *California Farmer* is now the *only paper* on the Pacific Coast that is continued by the *original Editor and proprietor*, commencing at the time this Journal commenced; and having been constant in its efforts for the good of these interests, deserves the cheerful patronage of all engaged in industrial pursuits, and of all good men.

Something New.

Two Million Copies of the Annual SHAKESPEARIAN ALMANAC for 1870, will be given away, and in order that the distributing may be made as rapidly as possible, I should deem it a favor to send, pre-paid, fifteen copies to any person who will judiciously distribute them in his locality. One of its features are the Seven Ages of Man's Life, Illustrated in a masterly manner. Address, DR. O PHELPS BROWN.

No. 21 Grand Street, Jersey City, New Jersey

CAREFUL DIRECTIONS.

We would most particularly desire our correspondents to be very careful in sending their Letters, Orders and Remittance to us, as there are several firms of Warren & Co. near us, unless the address is very plainly marked, mistakes will arise.

All Letters, Orders, Parcels, &c., intended for this office should be addressed WARREN & CO.,

from our Special Correspondent.

PARIS, February, 26, 1870.

FREE TRADE.

The Commission appointed by the French Parliament to receive evidence on the Free Trade *versus* Protection question, consists of 36 of its members, chosen by ballot. The majority of the Commissioners are out-and-out Protectionists, but this fact will not pre judge the issue. The Commission will cost two and a half millions of francs, will be public, and the evidence submitted at each sitting printed and published immediately. Thus there can be no surprise on any side. It is only to be hoped, that the Commission will prove an exception to the general character of such bodies in France, by the members displaying individual activity and research, but above all, that their labors may be concluded, at latest by the close of the year. The Society of Agriculturists has selected fifty of its prominent members, for examination before the Committee.

The impediments placed in the way of Farmers and the public, holding meetings to discuss Free Trade, owing to the unrepealed arbitrary laws on reunions make it difficult to feel the pulse of the Agricultural community on this question. Besides, the rural populations are more interested in the reduction, if not the abolition, of the barrierdues, *octrois*, levied on their produce, by the various towns of the Empire. There are 1543 tons in France, which raise the three-fourths of their local income, by taking the Farmer's produce.—The plan is so simple, the milch cow so patient and prolific, that more sturdy front must be presented by the country, if it intends to redress the injustice of the town.

AGRICULTURAL DEPARTMENTS

France has 89 Departments, which are subdivided into arrondissements, cantons, and communes—the latter numbering 36,000. For years, the radical evil of France has been, to be over functionlad—the nation complains of this official littelage and yet does everything to perpetuate the evil.—The agitation is spreading for something like an Agricultural Parliament, the members of which, would be primarily elected by the commune, the latter to be seperated in the canton, and so on, till the Departments would possess a body fully organised, and acting as a privy Council for the Minister of Agriculture. The wants of Agriculture are not so pressing, hidden, or increasing as to demand the organization of such machinery.—Yet Bills have been introduced into the Corps Legislatif to realize the idea. The only difficulty in the matter is, what ought to constitute a communal voter. Farmers and laborers, would be conceded to the proprietor. Existing local Agricultural Societies are adequate to the occasion.

EXHIBITION OF FAT STOCK.

Paris has just held its very successful show of fat stock. It is curious that the opening of Lent, should be selected for provisioning the butchers. Formerly, it was something like a punishment of death to sell meat during Lent. But we have changed all that, and in Paris at all events, good Catholics do not forego beef steaks on Fridays.

This exhibition is official, and dates its origin from 1844 when only sixteen Departments contributed. It was at the same time limited to fat cattle. Now France entire contributes, and also Algaria, and in addition to stock, fat poultry—alive and dead—grains, roots and machinery, enter the list. The "entries" of the Snow just held, give the following list of exhibitions:—of oxen, calves, etc., 3,504, sheep 359, pigs 210, farmyard fowls, living specimens, 700, dead, 400.—Cheese and Butter 800, Grain and roots, 1,400 lots. Machinery and implements, 700, ditto. As a general rule, the "fat kine" were got up regardless of expense, and showed that justice had been done, to saving oil cake, fine grain, and succulent roots. The Jurors were elected for the first time by the exhibitors, and the decisions have given satisfaction.

The Emperor visited the show, and evinced more than an official interest in his long and minute inspection. He had a compliment for each winner of a medal. An exhibitor approached his Majesty in a disconsolate state, complaining, that by a fault of the classifiers, his turnips were put among those of slow growth, whereas, they belonged to the order rather of Jonah's gourd, and instead of receiving a gold, he was only awarded a silver medal. The Emperor was reflecting how this iniquity could be redeemed, when the exhibitor stated, a shake of his Majesty's hand, would set matters right. No sooner demanded, than granted, and Napoleon the Third can boast of one acquaintance more.

But the last night of the exhibition was fated not to end harmoniously. The Sanctuary of obesity was disturbed at the "sma' hours," by the most unearthly cries. The police rushed in, and arrived quickly in the galleries of the building—the Palace of Industry, in the Champs Elysées—and found the rioters, not Jacobins as at first imagined, but a multitude of wild cats—always infesting this quarter—that had seized the dead poultry, and caused the uproar, partly by their dissensions, but more by their satisfaction. A chase commenced—the policemen, swords told on the vandals—the groans of the dying and the shouts of the "force," were responded to by a Pandemonium chorus, from the cattle and poultry below.

The prize ox has been auctioned off, for 3,400 frs.—ditto cow, fr. 2,100—the three prize sheep brought fr. 600, and the three medalled hogs, fr. 700. The prize ox will form the central figure in the procession of the *Bœuf Gras*, which opens our carnival. He has been bought by the proprietor of one of the Monster Eating Houses, where the miracle is daily prepared, of feeding thousands, fifty per cent cheaper than they could at their homes. But this monopoly of the laureat, will not prevent, at least some 2,000 restaurants, supplying their clients, with prime joints and savoury stekas from the winner of the blue ribbon—that contributes his first sirloin to their Majesty's.—For a fortnight at least, every one of the 3,000 butcher shops in the Capital, will display a prize animal. South Down legs of mutton, will be garlanded with roses, and Parma Violets will timely flourish around the loins of Durhams—the the internal fat of the animals will hang like Valenciennes lace, over the carcase.

PINCHING BACK THE RASPBERRIES.

A. M. Purdy writes to the *Rural New Yorker* in behalf of close pruning of raspberries:

"First, by doing so they grow more stocky and require no staking, (if properly done.) Second, the crop is larger and more uniform in size. Third, they are more easily cultivated, as it is impossible to pass through a plantation of black caps that are not kept within bounds." At the same time he claims that if *not* pinched back, and *allowed to grow and produce at will*, the plantation is ruined for future bearing.

"Well do we remember a plantation at South Bend, Ind., of three acres of Doolittle's, that was allowed to grow thus, and from which was harvested over seventy bushels the first bearing season of as fine raspberries as we ever saw; and the result was, that that plantation was ruined, and never yielded another crop that paid a farthing, while other plantations of the same sort, cut back the first year to within one foot of the ground, lasted for a number of years, and yielded large, paying crops every season.

"It stands to reason that any fruit-tree or plant must get *well rooted* before being allowed to yield a full crop; and, also, it is an admitted fact that if any tree or plant is checked in its growth, it will throw out stronger and more side branches, and grow much more stocky; consequently it seems strange to me that any person who has had any *experience* in growing fruits should argue against trimming back raspberries.

"Now, we have simply *practiced both* plans, side by side, and know if they are not pruned they must be staked. The crop will not average half as much, the plant is but short-lived, and it is impossible to get among them to work them out as they should be if left unpruned; while if cut back the *first* season to within one foot of the ground, and after that three to four feet, (the new growth as it attains that height,) they will be long-lived, and yield immense crops every season."

Mr. Purdy is right. Pruning is one of our methods of growing blackberries and raspberries successfully. We would not omit it under any circumstances.—*Horticulturist.*

Eastern Correspondence.

LETTER FROM AN OLD CALIFORNIAN AT THE EAST.

NUMBER ONE HUNDRED AND TEN.

NEW YORK, March 7th 1870.

EDITOR CALIFORNIA FARMER:

LONG SILENCE.

I have not written you as often as usual, because I have been very much engaged. A professional man in this city cannot command his time, he has either to be a slave to his profession or he is compelled to endure the mortification of seeing his rivals pass him. Living as I do in Bloomingdale, I have to waste as much as three hours each day in the cars, and my leisure hours are therefor limited, I keep myself however thoroughly posted as to the events which are transpiring in California—I often wish that I could drop in and see you and talk over old times.

CALIFORNIA FAME.

When I came home I was welcomed everywhere even by strangers, it was enough to know that I hailed from the Sunset Land, to inspire them with enthusiasm. The name of California shone with a magnificent lustre, it was a watchword which excited to noble and generous deeds, in every public gathering it was the signal for cheering.—Now all is sadly changed—I am sorry to say the name is seldom mentioned, and where it is, it arouses no enthusiasm. If I am introduced as a Californian, I am asked about the ungenerous persecution of the Chinese, the disloyal acts of the State Legislature, and their bitterness towards the Fifteenth Amendment.

People at the East cannot understand how the ringing loyalty and the generous, liberal and Christian tone of California can have so suddenly changed, even Democrats condemn it. It is a sore topic, and when I read the telegrams I cannot wonder at the hard words which have replaced the chaste. In my case however, I have hope that the spirit which used to animate the people of the State, is only subdued.

The Musical Festival in aid of the Mercantile Library shows me conclusively that the flame of of generosity for instance only needs some excitement to kindle it with brightness. The misuse of the Democratic victory in New York, has sadly disappointed those who wanted to show the superiority of Democratic administration. It was generally expected however—the city of New York alone is enough to kill the Democratic party.

FALL IN GOLD.

The great topic of conversation at present in this city is the fall in gold, it is interesting to listen to the comments of those who pretend to be expert in political economy—hardly two reason alike. It is a fact however that gold is not in demand at present and will probably fall even lower. The success of Gen. Grants Administration as measured by the results of its first year appreciates most remarkably the public credit, and we shall probably witness the unparralled return to specie payment without contraction. It has astonished even the most hopeful—it is a fact that a number of Bar Rooms and Restaurants down town give silver in change. Rumor says that the Chemical and other strong banks are prepared to resume.

Business of course sympathises with the decline in gold, and it is very bad, but I notice that the same complaint comes from London and Paris, so that there may be some other cause which is not apparent. I have remarked however that when times are "out of joint" with us, London and Paris at once complain. If hard times only stop their imports, it will be a blessing in disguise.—I used to be a freetrader, I am slowly changing, and believe to day I should heartily vote for protection to American Industry. Freetrade is beautiful in theory, but in this land where labor is, or ought to be honored—Protection is more beautiful in practice.

WOMAN'S CONVENTIONS.

I have read with the greatest interest, the reports of the Womans Convention in San Francisco, if I had been in California I should have attended it, nearly all the speakers I am acquainted with, and personally have a high respect for. The convention honored itself in voting for Mrs. A. A. Haskell. The opponents of Woman Suffrage in the *Tribune*, asks ridiculously, if all wimen must be compelled to exercise the right of suffrage! To such weak arguments an answer is hardly possible.

OLD CALIFORNIAN EAST.

I have met numbers of Californians in New York this past month—Gen. Frisbie, Gen. Fry, Mrs. Catherwood, *nee* Hastings, the Stanfords, Mr. Farly and Mr. Dundon. It is a great treat to have a good talk with them. Dr. Scott is much missed by his congregation on 42d street, and I am asked continually about him. I have been to Wallack's to see "School," it is one of the treats of this Metropolis to spend an evening at Wallack's,—The magnificent representative of "Hamlet" at Booth's Theatre however surpasses anything in this city. "Surf," at the Fifth Avenue Theatre I enjoyed very much. I hope you will give a warm welcome to Olive Logan. The Tammany is closed—"the Stuffed Calf," even the rowdies of Third Avenue cannot enjoy forever, or at least they will not pay for it.

OPERAS.

A superb spectacle is being produced nightly at Fisk's Opera House, it even surpasses the Black Crook. Fox, at the Olympic, is playing a burlesque "Hamlet" that is very clever indeed. How sick I am of "Shoo Fly," I think I must hate it almost as much as little carpet bagger Cox does. "Silver Waves," and "Dashing Spray," I would like to see go out of fashion at once. People in society are being bored this winter with amateur theatricals. They are the more annoying because we have such actors as Booth, Wallack and Fechter to enjoy.

M. A. G.

LETTER FROM HON. M. P. WILDER.

[PRES. OF U. S. POMOLOGICAL SOCIETY]

BOSTON, Feb 9th, 1870.

Dear Sir,

Your kind favor of Nov. 11th I have carried in my pocket ever since it came hand, in the hope of having a convenient opportunity of answering it. But as there will be no exhibition of the Am. Pomological Society until Sept. 1871, your note did not demand an immediate reply. I supppose ere this you have received the Proceedings of that society for 1869. * * * * * * * * It would be grand, indeed to have your programme carried out as proposed, and so far as our presence is concerned, I will state that a party of our Horticulturalists and Pomologists are now arranging for a trip to the Sunset Land, in May or June next, of which I shall be one. It will embrace gentlemen whom you know in our own and New York State.

I have the FARMER, and notice that you have published the proceedings of our annual meeting with my address. I embraced the opportunity to say a word for the sons of New England.

Yours as ever,
MARSHALL P. WILDER.

Gladly we hail this Letter, announcing the coming of President Wilder, who will find a host of friends to welcome him here, and work, too, for him to do, that will gladden his noble heart.

We want him to help us on with *our* Horticultural School for Girls. His voice shall wake us to duty.

THE EMIGRANT'S INQUIRIES.

NAPOLEON, JACKSON Co., Mich,
March 8th, 1870.

MESSRS. WARREN & Co.:—Having the satisfaction of perusing the CALIFORNIA FARMER of Dec. 2nd. 1869. In it I find under the head of new productions, different seeds mentioned, such as flax, hemp, castor beans, broom corn seeds, etc. Now gentlemen, my object in writing to you is to learn of you and to know if you have, or can furnish me with some good broom corn seed that will produce brush eighteen to twenty-two inches in length. Last season it failed getting ripe enough to grow with us. If you can furnish such seed, what will be the expense of the same by the pound, say a package of four pounds, and how much money must I send to pay for seed and postage. If you will inform me all about my inquiries, either by letter or in your paper, it will be gratefully received.

I send you a two cent stamp for the postage on one of your latest FARMER. The way I got the reading of your CALIFORNIA FARMER was by a nephew of mine in your State Legislature.

Yours respectfully,
L. H.

Yes we can do so, and the seed shall come to you—we are glad our FARMER was received by you—we send you a file for self and friend. We send the seed and you can send us something rare or curious and we will be satisfied.

We thank your Nephew for sending you the FARMER—*that* was good legislation—we *approve*, as the Supreme Judges say. W.

VINEWOOD, NEAR DES MOINES,
IOWA, March 5, 1870.

EDITOR CALIFORNIA FARMER:

Wishing to learn some particulars in regard to the inducements, advantages, and disadvantages presented by your State to emigrants seeking homes among your people, and not having the pleasure of any acquaintances with whom to correspond, I have thought of no better medium through which to gain such information than, with your consent, through the columns of your very valuable paper.

The impression created some years ago by the reports of returned miners and other adventurers, that a very large area of the State of California is wholly unsuited to the purposes of agriculture, and that nearly all really desirable lands and locations are brought up and held at enormous figures, still exists in the Middle, as well as Eastern States.

All persons, however, who have visited the Pacific coast, agree in speaking of the climate as most delightful and agreeable; and, without doubt, a great many persons and families with limited means, yet well-to do farmers, mechanics, fruit growers and others of various occupations, in different parts of this country, who have a constitutional aversion to a cold and changeable climate, subject to violent extremes, would gladly avail themselves of the climatic influences of the Pacific coast, if agricultural and other advantages were known to exist there, as in most parts of the Western States. In other words, if good farming lands, with good title, water, timber and market advantages can be obtained in healthy locations, and at as reasonable prices as in the Western or Prairie States.

An early reply, as much in detail as space will allow, will enlighten, and greatly oblige, at least one HOME-SEEKER.

[A private Letter also came, apologetical, as will be seen, as the writer supposed the Editor's time to be precious; and it is so, but we ever stand ready to aid in the cause of emigration, and have done so for over sixteen years.

We give our correspondent answers in brief and in part, and solicit from those engaged in the several branches of Agriculture named. Such letters published in OUR JOURNAL would serve as an *advertisement* of stock-men, and lead all newcomers to know them, and thus they would be liberally paid for the time and trouble they gave to this subject.

Another suggestion—and this to those who would learn of our State—i. e., to subscribe for *this Journal*, and thus learn of our great Agricultural State.

We shall send a liberal supply of the FARMER for distribution, and hope to hear from our correspondent again. We append the Postscript Letter:]

P. S.—Seeing that my enquiries are too numerous for the public eye, and not wishing to tax your patience to the extent of answering so many questions, I had thought perhaps you might know of some one in whose hands you could place this sheet, and who would be willing to give the desired information *in detail*.

I am engaged here with my family in raising fruits for the markets, and also in raising stock to some extent.

Now, what I want to know about California is this: Are there plenty of locations in your State where small tracts of arable lands, improved or otherwise, in healthy localities, with good timber and water, and good title, and where a permanent and cheap range for stock can be obtained? If so, where, and at what prices?

Are there any herds of full-blood Short-Horns in the State, and where are they kept? What breed of sheep and hogs are generally raised? What are good work-horses and blood-mares worth?

Is the cultivation of the silkworm, eggs and silk attracting much attention at present? Can you send me a correct account of the best results in the production of eggs or silk for the market, with the cost and profits?

LETTER FROM AN OLD AND VALUED CORRESPONDENT.

We are most happy to lay before our readers a brief letter from an old and highly-valued correspondent, that will be very kindly-remembered some years ago, and whose highly-interesting letters appeared in the FARMER.

We are glad to know we shall again please our readers with the thoughts that flow from our friend and ready writer.

NEW YORK, January 21, 1870.

EDITOR CALIFORNIA FARMER:

Dear Col.—I am [quite sure I owe you and Young America an apology for my long silence.—You and your readers will find by referring to your files, that some three years or more ago I left, Young America personified, standing partly denuded, with flashing eyes and compressed lips, waiting for the signal, that he might bound forward in the race for glory and immortality,—a race that would interest all mankind—that would be most brilliant in its progress, far-reaching in its influence, and glorious in its consummation.

He has lost nothing by the waiting, but has greatly increased vitality, a more radiant path to tread, and a far wider scope for the exercise of his youthful and vigorous ambition. God willing, he will soon dash into the arena, and with elastic step and waving plume outstrip all competitors. So let it be. J. BUTTS.

WHERE'S OUR BONNIE LADDIES?

The report is that there is in our Alms House a Scotch woman *one hundred and five years old!*

Now, for the honor of the land of Robert Burns, don't let an aged mother of Scotland remain in the Alms House, here in this land of plenty.

Scottish laddies, where are ye?

Agriculture.

WHAT I KNOW OF FARMING

BY HORACE GREELEY.

ESSAY NUMBER NINE.

PLANTING AND GROWING TREES.

Whoever has recently bought, inherited, or otherwise become the owner of a farm, has usually found some part or parts of it devoted to wood; and this if not in excess, he will mainly preserve, while he studies and plans with a view to the ultimate, devotion to timber of just those portions of his land that are best adapted to that use. In locating his timber, I would have him consider these suggestions:

I. Land wisely planted with trees and fenced so far as need be to keep out cattle, costs nothing.—Whatever else you grow involves labor and expenditure; trees grow of their own accord. You may neglect them utterly—may wander over the earth and be absent for ten or twenty years, while your fences decay and your fields are overcropped to exhaustion; even your meadows may be run out by late mowing and close feeding at both ends of the season, till a dozen acres will hardly subsist a span of horses and a cow; but your woods need only to be let alone to insure that their value shall have decidedly increased during your absence. They will richly reward labor and care in thinning, trimming, and transplanting—you may profitably employ in them any time that you can spare th m—but they will do very well if simply let alone.—And, unlike any other product with which I am acquainted, you may take crop after crop of wood from the same lot, and the soil will be richer and more productive after the last than it was before the first. Whether wholly because their roots permeate and break up the soil during their life and enrich it in their decay, or for diverse reasons it is certainly true that land—and especially poor land—is enriched by growing upon it a crop of almost any timber, the evergreens possibly excepted. So, should you ever have land that you cannot till to profit, whether because it is too poor or because you have a sufficiency that is better, you should at once devote it to wood.

II. Your springs and streams will be rendered more equable and enduring by increasing the area and the luxuriance of your timber. They may have become scanty and capricious under a policy of reckless, wholesale destruction of trees; they will be reinforced and reinvigorated by doubling the area of your woods, while quadrupling the number, and increasing the average size of your trees.

III. All ravines and steep hill sides should be devoted to trees. Every acre too rocky to be thoroughly cleared of stone and plowed should be set apart for tree growing. Wherever the soil will be gullied or washed away by violent rains if under tillage, it should be excluded from cultivation and given up to trees. Men often doubt the profit of heavy manuring; and well they may, if three-fourths of the fertilizers applied are soaked out and swept away by flooding rains or sudden thaws and floated off to some distant sea or bay; but let all that is applied to the soil only remain there till it is carted away in crops, and it will hardly be possible to manure too highly for profit.

IV. Trees, especially evergreens, may be so disposed as to modify agreeably the average temperature of your farm, or at least of the most important parts of it. When I bought my place—or rather, the first installment of it—the best spot I could select for a garden lay at the foot of a hill which half surrounded it on the south and east, leaving it exposed to the full sweep of north and north-west winds; so that, though the soil was gravelly and warm, my garden was likely to be cold and backward. To remedy this, I planted four rows of evergreens (Balsam Fir, Pine, Red Cedar, and Hemlock,) along a low ridge bounding it on the north, following an inward curve of the ridge at its west end; and those evergreens have in sixteen years grown into very considerable trees, forming a shady, cleanly, inviting bower, or sylvan retreat, daintily carpeted with the fallen leaves of the overhanging fir. I judge that the average temperature of the soil for some yards southward of this wind-break is at least five degrees higher, throughout the growing season, than it formerly was or would now be if these evergreens were swept away; while the aspect of the place is agreeably diversified, and even beautified, by their appearance. I believe it would sell for some hundreds of dollars more with than without that thrifty, growing clump of evergreens.

V. I have already urged, though not strongly enough, that crops, as well as springs, will be improved by keeping the crests of ridges thickly wooded, thus depositing moisture in Winter and Spring to be slowly yielded to the subjacent slopes during the heat and drouth of Summer. I firmly believe that the slopes of a hill whose crest is heavily wooded will yield larger average crops than slope and crest together would do if both were bare of trees.

VI. The banks of considerable streams, ponds, etc., may often be so planted with trees that these will shade more water than land, to the comfort and satisfaction of the fish, and the protection of those banks from abrasion by floods and rapid currents. Sycamore, Elm, and Willow, do well here; if good Grape Vines are set beside and allowed to run over some of them, the effect is good, and the grapes acceptable to man and bird.

VII. Never forget that a good tree grows as thriftily and surely as a poor one. Many a farmer has to-day ten to forty acres of indifferent cord-wood where he might, at a very slight cost, have had instead an equal quantity of choice timber, worth ten times as much. Hickory, Chestnut, and Walnut, while they yield nuts that can be eaten or sold, are worth far more as timber than an equal bulk of Beech, Birch, Hemlock, or Red Oak. Chestnut has more than doubled in value within the last few years, mainly because it has been found excellent for the inside wood work of dwellings. Locust also seems to be increasing in value. Ten acres of large, thrifty Locust near this City would now buy a pretty good farm; as I presume it would, if located near any of our great cities.

VIII. Where several good varieties of Timber are grown together, some insects or atmospheric trouble may blast one of them, yet leave the residue alive and hearty. And, if all continue thrifty some may be cut out and sold, leaving others more room to grow and rapidly attain a vigorous maturity.

IX. Wherever timber has become scarce and valuable, a wood lot should be thinned out, nevermore cleared off, unless it is to be devoted to a different use. It seems to me that destroying a forest because we want timber is like smothering a hive of bees because we want honey.

X. Timber should be cut with intelligent reference to the future. Locust and other valuable trees that it is desirable should throw up shoots from the stump, and rapidly reproduce their kind, should be cut in March or April; while trees that you want to exterminate should be cut in August, so that they may not sprout. There may be exceptions to this rule; but I do not happen to recollect any. Evergreens do not sprout; and I think these should be cut in Winter—at all events, not in Spring, when full of sap and thus prone to rapid decay.

I may have more to say of trees by-and-by, but rest here for the present. The importance of the topic can hardly be overrated.

SALT AS A PROMOTER OF ANIMAL LIFE.

Natural instinct, no doubt, has induced man and beast to make use of common salt. Its intrinsic value was always well recognized; the oldest writings, sacred and profane, refer to it by using its name frequently in a figurative sense; it had entered as an ingredient, with an emblematical meaning, in the Jewish dispensation, heathenish authors spoke in praise of it; Pythagoras calls it a substance dear to the gods, Homer calls it divine, Plutarch speaks of it as a symbol of the soul.—The Arabs of the present day, we are told, use it as an emblem of hospitality, and Abyssinians carry pieces of salt with them to offer it for tasting to those whom they wish to meet as friends. We ourselves consider it an important spice to render our food palatable, and believe its direct use within proper limits, almost indispensable for the continuation of the normal function of our organs of digestion and secretion. Almost all wild and tamed herbivorous animals, without exception, hunt by natural instinct for sources of salt to supply their craving. The opinion that the direct use of salt as an addition to our food was not necessary for the support of animal life—for most articles of our food did contain already a sufficient amount of it to answer for all practical purposes—may be true under particular, exceptional circumstances, and as far as a mere maintenance of life is concerned; yet as soon as the promotion of a vigorous animal life in general comes into consideration it has lost its force as an argument, particularly as far as our domestic herbivorous animals, as horses, cattle, sheep, and the like are concerned. We concede, also, as far as man is concerned, that our practice of adding salt to our food must be looked upon as being, in part a least a taste acquired by cultivation.

Carefully conducted practical experiments by some of our foremost agricultural chemists have settled that question; their experiments have reduced to figures what mere experience in more favored localities in a general way seemed to indicate. Boussingault proved by cows, that those which had been fed with an addition of salt to their food did not yield more milk, or contained more fat, or had increased in weight of flesh; yet they looked more healthy and more vigorous; in fact, their whole exterior had been highly improved as compared with animals which had been fed with the same food without an addition of salt.—Liebig came to the same result; he found in the case of two oxen, which were to be fatted in the stall, and of which one received its food mixed with an additional dose of salt, while the other one did not receive any, that the latter one soon looked bristly, dull, inactive and sickly, while the first one, which had received salt as an addition to his food remained smoothly skinned, lively and vigorous. Pasture feeding on a good grass crop, with its accompanying limited physical exercise in the open air, has been always considered the most normal food of our domesticated herbivorous animals as far as an aromatic, tender meat, with a liberal amount of well distributed fat, is concerned. The well recognized superior quality of meat from the cattle and sheep raised upon the marsh meadows along the seashore of North Germany, Holland, Belgium, England and elsewhere, has been ascribed to a large degree to the fact that their food—the marsh grasses—is frequently salted by the spray of the oceanic waters. Most of those who are at present engaged—remote from access of saline solution—with the raising and fattening of cattle and sheep are taking lessons from the previous observations, and are using salt freely, apparently with decided advantage; they presume that a proper daily dose of salt does aid in a well regulated and thus economical digestion, for it seems to favor a speedy solution and assimilation of the food, and at the same time creates an increased desire for water, which being promptly supplied causes an increased secretion of urine and perspiration. As nature has chosen these two ways, among others, to remove from the animal system those substances, which either have served their purposes, or are worthless whilst in an excess present, they conclude quite properly that an increased secretion of urine and perspiration may dispose of these obnoxious substances more freely, and thereby render a somewhat abnormal high stall feeding and a want of desirable exercise less serious. The results of practical investigation, it appears, may be summed up in the following statement: salt does not increase direct the live weight, yet it favors an economical digestion and assimilation of the requisite normal amount of food, and it allows us, if desirable, to feed our stock high without incurring a particular corresponding risk; it enables us thus to shorten the time for getting our live stock up to a desirable market value, and assists us, under certain circumstances, to dispose advantageously of a larger portion of their farm productions, as grain, hay, etc., in the form of live weight.

INSTINCT IN VEGETABLES

The root constitutes the plant's mouth. It terminates in a little sponge. The sponge drinks up the moisture from the surrounding earth. A simple experiment proves that whatever an amputated branch may do for an hour, the mouth of the plant is necessary to its permanent vitality. Two plants are placed for this purpose, side by side, in contiguous vessels. The roots of the one are in water or moist and fruitful earth, while a layer of dry sand above surrounds the stem. It flourishes. The roots of the second are in dry sand, while the water or fruitful earth surrounds its stem. It dies. Indeed, one need not try such experiments. Nature has demonstration quite as striking. Every boy has seen in the woods the roots of some tree, planted by the birds or the winds in the crevices of a rock, wandering down the sides of the great boulder in search of nourishment. Dr. Davy tells of a case in which a horse-chestnut, growing on a flat stone, sent out its roots thus to forage for food. They passed seven feet up a contiguous wall, turned at the top, and passing down seven feet on the other side, found the needed nourishment there, which their own barren home denied them. Thus closely does the instinct of vegetation imitate the wisdom of the animate creation. In another instance, related by Malherbe, an acacia threw its roots across a hollow of sixty-six feet, to find its labors rewarded by the discovery of a well of water in which they plunged, and from which they drew the food it so much needed.—What strange sense drew them toward the water rather than toward the rock or the sand?

A yet more singular instance of this search for food is narrated by Wallace in his "Malay Archipelago."

A seed had been dropped by one of nature's husbandmen, a bird, in the decaying trunk of an old tree. It sprouted, put forth roots, branches, and a little stem. But its roots in vain sought nourishment at the breast of its dying foster-mother. At length, abandoning all hope of support from her, they pushed out from their home to seek a living. They dropped to the ground, a distance of sixty or seventy feet, and fastening there, succeeded in securing an independent livelihood. As time passed on the old trunk died, decayed, disappeared. The new tree remained suspended, as it were, in mid-air, the roots proceeding downward and the branches upward from a point about equidistant between the two.

It is not thus alone that the root exhibits its intelligence. It displays equal sagacity in selecting from the soil only those elements which its own plant requires. Sometimes it errs, and drinks in a deadly poison. But its native instinct is more rarely at fault than the supposed superior wisdom of man. Trees rarely eat unwisely. They are never guilty of gluttony.

Yet if the root be the principal feeder of the plant, the chief source of supply for its marvelous circulation, it does not alone fulfill this office.—The leaves also absorb moisture from the air.—"In the burning days of summer," says M. Pouchet, "I have found carpets of ice-plants on the most arid rocks in Greece. Although it had not rained for a month, these plants displayed a remarkable freshness, and their foliage was none the less covered with a coating of icicles."—LYMAN ABBOT, in *Harper's Magazine for March.*

TRUE'S
IMPROVED
POTATO PLANTER.

This is, undoubtedly, one o the most valuable Machines adapted to Agricultural purposes ever introduced.

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such sized slices as the farmer may prefer; drops them places with the most perfect regularity, and covers them perfectly, and does all this as fast as a horse can walk over any ground that can be plowed

No intelligent farmer can see that an implement with which one man can, with the aid of a horse plant six acres of potatos in a day, is of inestimable value because the days in which PLANTING can properly be done are very few, while he has all SUMMER and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attending to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor-Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune with it.

Particulars and Catalogues can be had at our office.

WARREN & CO.,
320 Clay street, up stairs.

Miscellaneous.

OIL CAKE MEAL

THE BEST FEED KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal; and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other foods as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent; Barley Meal, 13 per cent; Oat Meal, 18 per cent, Oil Cake Meal, 23 2-100 per cent. For life-sustaining properties to all stock exposed to sudden changes of weather or over-driving it has no equal

For MILCH COWS particularly valuable, increasing the quantity of milk and greatly improving its quality to a far greater extent than any feed known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food; generally mixed with the mash of bran, slops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other food and no feed known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair.

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($25 per ton,) it is the cheapest feed in market. It is now selling in New York at $42 per ton, gold, at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

PACIFIC OIL & LEAD WORKS,
NOS 8 AND 5 FRONT STREET,
3215 San Francisco.

WALTER BROWN & CO.
WOOL
COMMISSION MERCHANTS,
26 and 28 Park Place,
21 and 23 Barclay Street,
WALTER BROWN, HENRY T. BROWN. NEW YORK.

Regular Public Sales of Wool will be held monthly.
Consignments Solicited, and advances made if required, arrangements for which can be made with Messrs. Ross, Dempster & Co.

CAST-STEEL DAIRY KNIVES

WE HAVE RECEIVED INVOICES OF THE CELEBRATED
Cast-Steel Dairy Knives,
Manufactured by D. C. Young of New York. We have them of all sizes, from those of FOUR BLADES to cut FIFTEEN INCHES, up to THIRTEEN BLADES to cut TWENTY INCHES.
These Knives are of very great advantage to Dairymen, and are worthy their attention.
For sale by WARREN & CO.,
"Farmer Office," 320 Clay Street, up stairs

Jebb's Patent Churn.

This admirable Churn—one of the best yet invented—and which was pronounced
THE BEST CHURN EXHIBITED AT THE LATE STATE FAIR,
and to which was awarded by the Committee
THE FIRST PREMIUM,
is now offered for sale to the Trade, or at Retail, in lot to suit purchasers at the
CALIFORNIA FARMER OFFICE.

FLAX! FLAX! FLAX!

THE OAKLAND
Cotton Manufacturing Company
Have commenced operations with their new Burlap Machinery, and are prepared to
BUY FLAX,
either in the straw or broken, in any quantity offered.
All communications concerning the sale of Flax, or the Cultivation of it, to be addressed to th Secretary of the Company,
PH. SUSMANN.
32-13 5 Sansome St., San Francisco.

20,000 NEWSPAPERS.

We have TWENTY THOUSAND Newspapers—Newspapers of the largest size among our Exchanges, suitable for WRAPPING PAPER for Dry Goods, Clothing, etc
—ALSO—
TEN THOUSAND
Of the best Agricultural Papers known, comprising our various Agricultural Exchanges from all the Eastern States and Europe. Farmers who would like valuable reading matter, which contain choice Essays and Letters on Agricultural matters, can have these at low rates by the 100. Apply at FARMER OFFICE.

Gardeners, Foremen, Etc.

Those who desire to secure good and reliable Gardeners, Orchardists, Vine-pruners, and Foremen upon their Farms, can be supplied from our Office by sending notice of such wants, and giving us the special duties they desire performed, the wages they will pay, and all the particulars of board, washing, etc.
It will be our purpose to send out no person that is not fully qualified for the specific duties desired, nor any man who is not of good character, nor shall we send out any man until, by a proper test, we know he is qualified in every respect.
Having long experience in this business and knowledge of what is wanted, we shall only give employment to the *Best Men.*
For our time, examinations, correspondence, etc., we shall expect a compensation that will repay us

Horticulture.

PLANTING TREES.

The business of planting Fruit Trees, Vines and Plants, of all kinds is not so well understood or practiced as it should be. There is too much hurry and hap-hazard work, and this is the cause of the non-success in this science.

We remember years gone by when several of the ephemeral papers that started up on this coast under the name of Agricultural papers, rather in opposition to this Journal than for any love or real knowledge of the science of Agriculture.—The *Culturist*, the *Agriculturist*, and the *Home Journal*, each of which after a short and sickly life, having no love for the cause, and as it "didn't pay" gave up the ghost, we remember how often these Journals would talk about the simplicity and ease with which an Orchard or Vineyard could be planted; many of their teachings were like this.

"Just take a crowbar and make a hole in the ground and stick down a cutting, and the Vineyard was made." Plowing the ground after cultivation was wholly ignored, and we know many persons who listened to that folly, and paid for lost labor dearly.

"For Orchards too, just dig a round hole and thrust in the tree, and it was bound to grow."

This was the sum and substance of their creed, easily done—we ask where are those Orchards and Vineyards to-day, and where are those Journals and those who sent forth their senseless jargon.

The same Journals all denied the possibility of cultivating our hill sides and mountains for Orchards or Vineyard, and labored to combat every argument this Journal put forth to awaken a due attention to those places and those systems of culture, and places for successful culture, which to-day is fully proved by the rich, pure wines that comes from our mountain sides, to feast and gladden all.

We always have advocated a deep and thorough culture of the soil over an entire Orchard or Vineyard—deep culture, and thorough work is our motto, for we reiterate "nothing is worth doing at all, that is not worth doing well."

When the loose practice is adopted of merely digging a hole in the ground and planting a tree, even if that space is well prepared—the land or dry soil should be cultivated before the second year, else if the tree makes a good start and a vigorous growth, when the roots reach the sides of this round hole, it finds an impenetrable barrier. Then the roots turn and perform a circuitous growth, in a little time that space becomes filled with roots, the nourishment of that soil is all absorbed, the tree suffers and dies. Let any one examine a plant in a pot—long planted—and this matter is truly illustrated.

Another important rule, never leave too much top of the tree or vine, the roots are the main thing, if good roots, they will make top enough and soon enough too, therefore head in and down first, but when too much top is left on, the strength of root to supply a large top, the circulation grows weaker and weaker, then ceases and soon dies altogether, but otherwise a new top and a strong and healthy one is the sure result of the judicious system of close pruning.

While it is always best to plant trees early in the season, trees of all kinds can be planted to a very late period, provided the trees you plant have not advanced much. It depends upon the condition of the tree, greater care however is required when a tree is planted late, that moisture be freely administered when planted, and for a little time after, and that the trees be well mulched.

With good care and culture even here in California, trees and vines, that have been kept back can be successfully planted even up to May Day—we have planted with complete success up to July, and have even lifted trees in blossom, transplanted them and had fruit from trees so planted.

Remember, and let what is done, be well done.

STRAWBERRY FERTILIZERS.

The following recipe was first tried years since with, apparently, high satisfaction. The growth was vigorous, the crop abundant, and the berries large. It was, therefore, very largely commended as fitted to secure admirable results. Old beds, under the treatment suggested, are said to be even better than new. The proportions are for a bed thirty by forty feet. Commence using the fertilizer when the new leaves are being put forth, and apply it toward night, three times, at intervals of a week between each application. It should be dissolved in thirty gallons of rain or river water. Indeed, if anything be varied from this, let the proportion of water be larger: Nitrate of potash, sulphate of soda, or "Glauber's salts," and saltpeter—of each one pound; of muriate of ammonia, one quarter of a pound. Keep the bed well weeded. Tried on old beds, even, the results, as above hinted, are highly gratifying.—*Canada Farmer.*

CAREFUL DIRECTIONS.

We would most particularly desire our correspondents to be very careful in sending their Letters, Orders and Remittance to us, as there are several firms of Warren & Co., and unless the address is very plainly marked, mistakes will arise.

All Letters, Orders, Parcels, &c., intended for this office should be addressed

WARREN & CO.,
California Farmer Office.

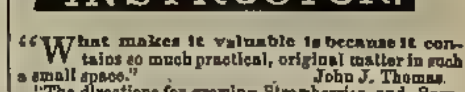
VALUABLE PLANTS FOR SALE.

☞ Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and to so cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, to gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us. WARREN & CO.,
tf Farmer Office.



BOUND VOLUMES FARMER

☞ Volumes of the "California Farmer" for The last EIGHT YEARS, uniformly bound, can be had at the Farmer Office at $8 per Volume.

These Eight Volumes contain more useful matter touching the practical workings of Agriculture as adapted to California Culture than any Book or Books Extant, as they comprise hundreds of Experiments, Letters and Essays upon the Culture of Cotton, Rice, Coffee and Tobacco; Grapes, Strawberries, and all other Fruits, with the Culture of Hops, Castor Beans, Flax, Hemp, &c. and the Whole series of Essays of L. Prevost on Silk Culture, from early beginning.

This set of Volumes would be a Library of itself and is valuable to the Cultivator of the Soil.

Orders sent to Farmer Office will be promptly attended to

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING MARCH, 17., 1870.

THE CALIFORNIA FARMER READING ROOM, AND MUSEUM OF NATURAL HISTORY.

320 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite

TERMS OF ADVERTISING:

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion, twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SAMPLE COPIES.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination, hoping our paper will meet their approval and induce them to subscribe, and to ask their neighbors to subscribe also.

Send for Sample Papers and get up a club. Address

PUBLISHER CALIFORNIA FARMER,
San Francisco, Cal.

Editor's Chair,

Our readers will find in our "Home" department some interesting matter for study. The "Human face"—a "Blush,"—Poetry of real merit and beauty, also a notice of the death of a most estimable Lady, the daughter of the late Theodore Payne Esq., one of California's best men. This young lady was well known in our city and her death will be most deeply lamented.

Horace Greely's letters must of course be read every week, for they are worthy of it—Salt for Animals, and man too, should be carefully read, the Instinct of Vegetables, also, these are on the 66:h page.

We call special attention to "Planting Trees," on the 67th page, we have given our own experience of many years actual labor in this duty and know it to be so.

"All About Pussy," on the 71st page has many points and Historic facts worth knowing—new to many.

COMPLIMENTARY.

We acknowledge a Complemeatary Ticket to the Twenty-first Anniversary Ball, of the First Hebrew Benevolent Society, at Union Hall, on the evening of the 19th.

This Society has done much in the cause of Benevolence, and for their good deeds they should rejoice and enjoy the merry dance—the occasion will be a happy one.

We gladly welcome again our highly-esteemed correspondent, "M. A. S." His friends have made anxious inquiries for him frequently, and wish to know when we can look upon his genial, happy face, in our "Sunset Land"

WINE AND WINE MAKING.

We have a valuable Essay upon the matter of Wine making, and the new Tariff now before Congress—it will appear in our next.

JENNY DARE.

We have a letter from our Penn. correspondent, for our next.

ARITHMETICAL DISCUSSIONS.

We have an interesting sketch, and questions for the Student ready for our next.

DEATH OF LITTLE CHILDREN.

We have an important sketch upon the Causes of Death among Little Children, for our next.

Acknowledgements.

Articles Received at the California Farmer Exhibition Rooms, No. 320 Clay Street.

We acknowledge the receipt of the Bound Volume of the State Agricultural Society of Iowa, through the kindness of J. M. Mansfield, Esq., Secretary.

CENSUS OF IOWA.

We are greatly indebted to the Secretary of the State Agricultural Society of Iowa, for a volume of value, being the Census of Iowa, as returned for 1869, showing in detail the population, Agricultural Statistics, Manufactures, and all matters of general interest.

We have received the Transactions of the Massachusetts Horticultural Society for 1869, full of interesting Reports and data of value, from which we are always glad to select, as this Society is the most prosperous of any society of the kind known, and with Buildings and Capital of a Quarter of a Million of Dollars to work with!

We have a New Catalogue of Messrs. Graves, Silver and Willard, of Geneva, N. Y.,—Nurserymen of good repute. This New Catalogue is devoted to Greenhouse and Bedding Plants, and contains a fine list of Choice Plants.

Horse cars are about to be introduced into China. An enterprising Prussian has obtained the privilege of laying down tramways in all the cities of the Empire. At this rate, the familiar image of that municipal vehicle will soon possess the world.

THE SEASONS.

RAINS—FROSTS.

We think the greatest grumblers and faultfinders with Nature this season are now silenced; the dead cattle are restored to life; the famishing ones are fed; the drooping crops are revived, and all Nature seems to smile—even upon the thoughtless and the ungrateful. Nature, like the blessed rains, comes down with its refreshing influence alike "upon the unjust as well as upon the just."

From all portions of the State we are now receiving the most cheering reports of the seasons. Every kind of produce, from the Grain fields to the small crops and small fruits, save a few frost clipped spots, denote abundance. Those portions of our State where *skim plowing* and *slip shod* work have been done,—where late planting upon poverty-tilled soil has been the practice, there can be seen the clear proof of, "As ye sow, so shall ye reap; if ye sow sparingly ye shall reap sparingly," and these truths are exemplified all over our State.

Wherever the land was well and deeply cultivated and planted on dry soil, or even planted early or upon "Summer fallowed" land, there the crops are fine indeed; never have they looked better. There has also been some attention paid to plowing in a green crop, and otherwise manuring lands where successive crops have been taken off; this has, in every instance, given the greatest satisfaction by the best results—much of our land being greatly reduced in strength by repeated harvests, without returing back to the soil the nourishment taken from it. This is unwise farming, and it always punishes those that are foolish enough to practice it.

FROSTS AND SNOW.

Frost has nipped some of the *budding hopes* of the cultivators at Los Angeles among the fruit growers, and at Santa Clara, among our strawberry men, "Jack Frost" gave them a nip; but we think that after a little it will be found that there will be blossoms enough left to make a good crop. Our fruit growers are so apt to allow their trees to overbear that Dame Nature was angry, and she sent a frost to cut off some of the extra blossoms, and thus will leave enough to make a good crop and better fruit; this is our logic.

HORTICULTRAL SCHOOL FOR GIRLS.

Yes! let it be so. A Garden School for Girls, and let this School on the Pacific, be the patterns School of the Union.

We commend most earnestly the following deeply interesting Letter from our valued Correspondent to our readers. We know many hearts will respond to it at once:

"Berkeley" speaks well.

The cause is a good one—the plan a good one, and the time is very propitious for such an enterprize. That the cause is a good one, the names of those men at Boston who have taken hold of this work is a garrente that such a School is of great value.

Marshal P. Wilder, whose name is a host for all Horticultural enterprises, it will be seen has taken hold of this work at Boston, and it will also be seen by his letter in another column that we shall have Mr. Wilder with us in May or June next, and with him many prominent Horticulturists and Florists, all of whom come to visit this "Garden of the World," and when they come, we suggest to Berkeley that we prepare and make ready. They will aid us, and California shall have a Horticultural School for Girls.

We have confidence in the liberality of Californis for such a work, and fully beleving in the value of such an enterprize, we hereby pledge *ourselce* in advance for Books for the Library of this School to the value of ONE HUNDRED DOLLARS, and also a collection of Engravings and Paintings of Horticulture and Floriculture of an equal value, for the Library Rooms, and we hope this work may be consumated at an early day.

We hope "Berkeley" will still plead for so noble an enterprize. Our columns wait the Bugle Voice.

AGRICULTURAL PAPERS ABROAD.

We would suggest to many of our Eastern Journals, especially in the Rural Districts, and more particularly our Agricultural exchanges, that if they desire to enlarge the CALIFORNIA INTEREST and feeling, which is general, they can do so by giving their readers the CALIFORNIA FARMER in connection with their own paper, and thus increase their own subscription list. We will offer them liberal rates in order to give this now desired interest to the many inquirers about California in all the Eastern, Middle, and Western and Southern States. We shall be glad to club with all good journals, on liberal terms. Several of our Exchanges place the FARMER on their list, and club with us.

ST. PATRICK'S DAY.

Just the same as ever, the rain must fall on St. Patrick's Day, but he must be a good patron Saint because the rains come so opportunely to bless the earth.

The rains of the past night came very heavy, and continued up to about 10 o'clock A. M., when the sun came out, and the balance of the day was a pleasant one, and very acceptable to the thousands who were anxious to enjoy the day.

The day has been duly honored by a large and very happy, and also handsome procession, orderly in every respect, and most highly creditable to the great mass that had gathered to do honor to the day.

The Oration, Poem, Procession, Ball—all have been duly arranged, and will all be generally reported by us hereafter.

As our publication day fall's on this eventful moment, we hope for a share of the Saint's goodwill and blessing.

We repeat, the whole arrangements of the day were carried out in an orderly manner—prompt, and in good style, and most highly creditable to all.

THE PREVOST FUND.

The Committee of the Prevost Fund would respectfully invite all the friends of the late Louis Prevost—the PIONEER OF SERICICULTURE—to forward to them such contributions as they are disposed to make to this Fund; and it is to be hoped that those Journals over this coast that have always spoken so kindly of this most-worthy Pioneer, will present this matter to their readers, and thus enable the Committee to carry out the plans designed for the Widow, and erect a suitable Testimonial to the Memory of Louis Prevost.

Contributions can be sent to the Treasurer—Judge D. S. Payne, San Jose; Hentsch and Berton, Bankers, San Francisco; CALIFORNIA FARMER Office, San Francisco.

At an early day the contributors will be invited to meet and arrange the disposition of the Funds that shall be raised.

A NOBLE RESPONSE.

We append a portion of a letter received by us the present week, from a well-known Vinegrower and Orchardist, and an Early Pioneer for the Prevost cause.

The letter came to us as a private one, but its contents are so noble and generous, and the sentiments so excellent and feeling, we copy them, and hope it will be the means of leading others to follow so praiseworthy an example.

The writer says:

"I am glad to perceive that the Widow has not lost all, and that there is such a fair way to smooth her pathway in life.

"I do not approve of Costly Monuments. A Solid Tablet should mark the spot; his deeds and efforts to consecrate the ground; his deeds and efforts to benefit his fellow-men will preserve his memory to late generations of California Sericulturists; his spirit, basking in the radiance of his Maker, may often revert to our earthly pursuits, and guide us in this favorite vocation.

"Col., put me down for Fifty Dollars."

[Noble sentiments—generous conclusions!]

The writer further says:

"We all should feel kindly towards those who, by great self-abnegation, in opening up and following new paths of industry, establish their claims as Public Benefactors.

"You propose to invest the amount donated, as an Interest Fund. What is designed to do with it after the Widow's death?

"Should children survive, the Interest should be paid to them until *they* are of age, and then remain a Perpetual Fund, to be used for Premiums, to promote and experiment in Sericulture.

"The money to be invested in State of California or U. S. Bonds."

In reply to our generous correspondent, we repeat the plan of the Committee, which is, to purchase or erect a neat and comfortable Homestead for the Widow, then to erect a neat and creditable Tablet to the Memory of Louis Prevost, and the balance to invest securely, the Interest to be paid quarterly to the Widow.

We suppose further dispositions can be arranged by those whose generosity builds up this Fund.

NEW CONTRIBUTORS.

It is to be hoped that the many and warm friends of the *living* Prevost will now come promptly forward, and voluntarily, too, and make known their wishes in this matter, so that this work may be speedily consummated. Will they not contribute early?

LOUIS PREVOST'S FAITH.

We copy from the little book on Silk Culture, published by this lamented friend, the following testimony of his early faith and zeal in this work.

Such zeal should prompt those who now remember him to do honor to the memory of such a man:

Our advantages are many in California, and, indeed, very great. To be duly appreciated, they must be estimated singly and individually; but how much greater and more striking will they then appear, if considered collectively. The decisive impulse is already given, and its mighty influences extending throughout our State; our people are awake; hope dawns auspicious; the day and its brightness will be ours, endued as are our people with fortitude, with energy, and intellectual resources unsurpassed. Is there one American who can doubt it?

I have no desire for pecuniary benefit to myself, to grow out of any knowledge of the silk culture, which it may be in my power to impart to the public. Anything that may be a benefit to that noble cause I will publish, as my earnest desire is to be useful, by aiding the introduction of a culture, which will make our people rich. In opening for them a field (and also to our country) of unceasing wealth, I shall feel amply compensated for the years of practical experience which I have given to silk culture, from the pleasure I shall receive in the knowledge that my humble efforts were to some extent the means of introducing and establishing in our State an industry which will save annually many millions of dollars to our people, and make us the largest silk producing country in the world.

OUR CHIEF MAGISTRATE.

It will be seen by the Records of the present session of the Legislature, that Gov. Haight has the moral courage to veto promptly such measures as he considers are injurious to the best interests of our State, whatever his party may say or do.

Although differing in political sentiments with our Chief Magistrate, we honor his independence of party, though, and his high moral courage in all cases of emergency.

OVER THE BANK.

The Nile has risen this year to a greater height than on any occasion within living memory, and the damage done is estimated at $40,000,000.

This beats our Sacramento river floods. We must try again; it won't do for California to be beat at anything!

Home Correspondence,

A HORTICULTURAL COLLEGE FOR THE PACIFIC.

DEAR FARMER:

You have doubtless noticed in the Boston exchanges that an effort is being made for the permanent endowment of a Horticultural School for Girls, in the neighborhood of that city. If successful, as no one can doubt, it will be the second institution of the kind in the United States.

Early in the Autumn of last year, Miss Marwedel, an experienced teacher in the Industrial Schools of Europe, arrived in New York, and laid before Andrew Fuller, Orange Judd, and other friends of Horticultural education, her plans for the establishment of a self-supporting Horticultural School. It is needless to say that she met with the warmest encouragement. Mr. Cornell, with characteristic liberality, donated the necessary lands, in the vicinity of Cornell University, and President White interested himself warmly in securing funds for buildings and instruction. And now the Bostonians (perhaps with a view to utilize the alarming surplus of femininity and divert it from the dangerous ground of Suffrage) are coming out strong on the Cardinal points of Higher Physical, Domestic and Industrial Education for Woman.

What such men as Marshall P. Wilder, and George B Emerson, and Freeman Clarke, and Lund, and Parkman recommend, the public can afford to adopt, without stopping to question; but when these names and many others not less illustrious were appended to a call for a meeting in behalf of the proposed institution, Horticultural Hall was filled with those who came to hear what a *Girl's Garden School*, or School Garden, would be. Hon. Josiah Quincy presided, and handsomely introduced the chief orator, Mrs. Ednah D. Cheney, who said, "she thought the rich women should be taught how to use their hands, and the poor women how to use their brains;" and here it was proposed to offer the same education of hand and brain, to rich and poor alike. The cultivation of flowers and fruits was a paying business; Organic Chemistry, and Vegetable Physiology and Botany would be taught, in connection with Practical Horticulture. In Summer, the School would offer plenty of work, fresh air, and reasonable remuneration. The time not actually used in the Garden would be occupied in scientific studies, and in Winter the course of study would be more varied, embracing whatever was needed for a thorough English education.

Rev. James Freeman Clarke said many noble things concerning woman's work, of the discontent and uneasiness suffered for want of reasonable and remunerative out-door employment.

Mr Edward S. Rand spoke directly to the point of necessary outlay—estimating it much below the other speakers—thought $15,000 would start the School, $8,000 to be expended for ten acres of land, and the rest for house and barn sufficiently commodious for an "experiment" of this kind.—And so the "books were opened" for subscriptions to the Horticultural School for Women.

So much, dear FARMER, I gather from a private letter. I cannot help thinking what such a School might be where it is not *Winter* or *worse*, eight months of the year, and where fruits and flowers do not need such an amount of coaxing. Do I not remember the field of ten years' experiments with the "six best cherries" and "twelve best pears,"—with Isabellas and Dianas, to say nothing of buried roses which would not resurrect? Do I not remember the poor limp Callas and stringy Geraniums of my "window gardening," cried over with maternal fondness, but which no warmth of affection would save? Does not the Professor remember that getting up o' nights, along in the wee small hours, to replenish the furnace and save our darlings from destruction? The Bostonians will do what they can, and whatever climatic privileges they enjoy will be made the most of, but *the* Horticultural School for Women—their ideal realized—must grow up on the Pacific coast, where—

"The trees each month yield ripened fruit;"

where—

"The gardens and the goodly walks
Continually are green,"

and not far from the classic shades of

BERKELEY.

LANDLORDS.

They are very apt to have the name of being "hard-hearted" and "Shylocks," and many other hard titles; and though they undoubtedly may sometimes be tried like all other men, there is never an excuse for cruelty, or tyranny, or that merciless and inhuman conduct that is so often exercised by Landlords, especially upon the poor unfortunate.

The recent case of merciless conduct shown to an artist well known in Oakland, who was sick, by that *unfeeling landlord*, will soon have a *judicial* examination, and we *do* hope the case will be thoroughly investigated, and justice done to all parties.

The blood of the poor artist demands it.

We learn by the Oakland papers that *that* landlord's name was PETER LYNCH—a most unfortunate yet significant name.

"*Peter denied his Master!*" and LYNCH is—is—a *hard name* to remember.

SANTA CLARA AGRICULTURAL SOCIETY.

By a letter received from Tyler Beach, Esq., the Secretary of the Santa Clara Agricultural Society, we learn that this Society will hold a Fair the coming year, commencing October 3, and lasting one week.

Santa Clara Valley can make a Grand Show if her people will only put their "shoulders to the wheel," and see what they can do. Now that they are to have the Normal School, they certainly will have the *Fair* there.

HOME LETTER.

LETTER NUMBER 4.

MINERVA GLEN, Santa Clara Co.,
March 4th, 1870.

COL. WARREN,

Dear Sir: That happy and warm-hearted personage who is "boss" over the kitchen, my clothes and the flower garden, has just been reading me a mild lecture on dry matter of fact newspaper articles, arguing, that the most successful efforts of a writer or talker, are those which are characterized by an undercrain of attractive palatable spice, that when words are too morose and sentences too dry, the subject, no matter how important, partakes of the general staleness, and the spirit is absorbed in the gravity of the manner in which it is presented. My letter to the FARMER No. 3, was the cause of all this. I do not dispute the point with her, but every time she stops to take breath, I solemnly I no, gaily, promise to do better in future, and keep out of deep water hereafter, if I can. At present I have something to say about

TROUT CULTURE.

About four hundred yards from our house is a gulch or ravine, (not very deep) the bottom of which is flat, with an average width of about sixty paces. Through the centre of this bottom flows a beautiful stream of clear cold water which never diminishes in volume. On either side of this stream is a dense growth of timber consisting of fir, oak, maple, madrone, dogwood, laurel and willows. Now in this ravine, are two lagoons or ponds, each in its respective niche in the bottom of the canon. In size they are about twenty feet by forty feet. At present they are the habitation of frogs and water lizards, they are full of decayed vegetable deposits, which have been accumulating here for ages. The water on the surface comes bubbling up from springs below. The vegetable deposit has an average depth of eight feet. As soon as I can bring the means to bear I shall remove this, and apply it to the soil. From its appearance I think it will make an excellent manure. I shall then wall up the ponds with stone, which are in handy abundance, put gravel on the bottom, lead this stream which I have spoken of through both, and stock them well with those speckled beauties of sylvan shaded brooks, and from this small outlay, I feel confident that new happiness will be found to assist the dull monotony of every day toil; if it should not be a source of profit continually. There are hundreds of other places similar to this of mine in our beautiful State, and if farmers would give a small part of their attention to fish culture, they would not only place on their tables a most delicious dish, but would awaken in the minds of their children a love for a new and exceedingly pleasant occupation.

Our apricot and peach trees have been in bloom for some days, as are also some kinds of plums, and the air is laden with their sweet fragrance.

The rains have come again, and given to the whole country an abundant supply of moisture. On a recent visit to the valley of Santa Clara I noticed for a distance of twelve miles, every piece of available land was sowed in grain, some of which was very far advanced, and some just up. The farmers are jubilant and in the best of spirits, although the early rains were *fearful* this season, I believe the latter rains will bring the entire crop up to the average, throughout the State.

The earthquake of the 17 ult. was severely felt on the mountains. The first intimation we had of its approach was a tremendous report of subterranean thunders, dim at first, increasing as it neared us, at its conclusion, the earth raised and under our feet for an instant, and vibrated for at least fifteen seconds. This phenomenon, observed here in the forests, among the lofty mountains, is a sight which beggars description. The hills and mountains rock, groan, and tremble on their foundations. The tallest trees swich and reel like slender willows before the wintry gale, rocks are cast from its natural channels; huge boulders are dislodged, and come thundering down the mountain sides. All nature acknowledges the presence of an awful power, and humanity, helpless humanity, stands trembling and aghast.

I know I have made this letter too long, but must excuse me, my subject ran away with me. Adieu. I am yours truly,

A. E.

REPLY.

We are most happy to receive the pleasant and interesting Letter of our Correspondent, but we would not for the world enter into the "Farmer quarrel" about that Letter Number 3—for we know we endorsed that Letter. We say however you could not help saying, "every man has engraven upon his heart the picture of some woman, for after your own description of your pleasant "Happy Home," every body knows the *picture* on your own heart—further we speak not—except to say we highly approve your plan of a Trout Pond, that is A No. 1.

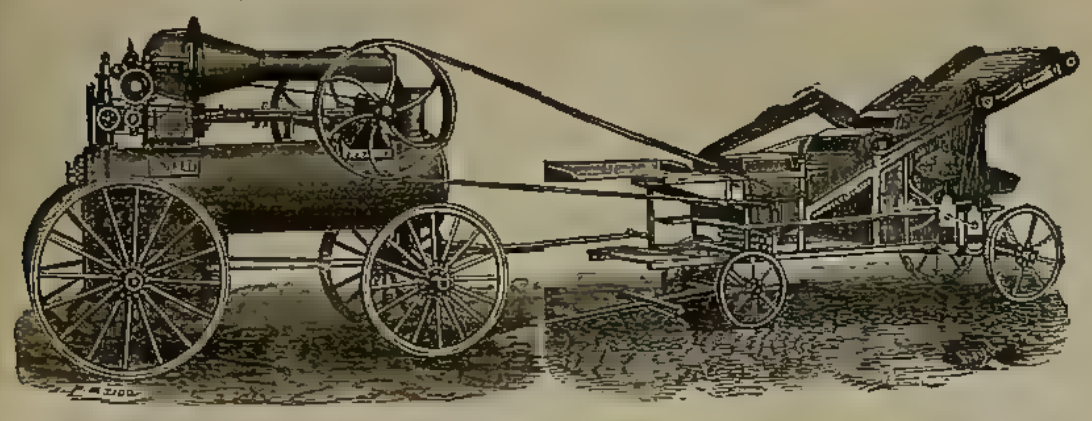
INSANITY.

The statistics of insanity in California is rather startling. Almost one thousand patients remained in the Stockton Asylum on October 1st. The mortality among the patients is very large, 115 having died within the year previous. During the year, 482 were admitted. This is a fearful percentum of craziness. Many causes combine to produce this condition of things. Hard times, dissipation—in fact, almost every violation of the laws of Nature—aid in sending poor humanity to the Asylum, and very soon many of them to the grave.

HORSE-FLESH STEAKS.

The French Society for the Propagation of Horse-flesh as an article of Food, states that the quantity of this aliment sold in Paris during September, October and November, 1868, was 1,200 pounds, or 65 Horses. In the same three months of the past year the quantity rose to 9,000 pounds, or 638 horses.

"HOADLEY" "RUS SELL!"



HOADLEY'S IMPROVED THRESHING ENGINES!!

RUSSELL'S IMPROVED SEPARATORS!!

CONSTITUTING PERFECTION IN THRESHING GRAIN!!!

THESE MACHINES are now so completely constructed as to render them the very "NE PLUS ULTRA" of ENGINES and SEPARATORS for the Farming community of California.

THE ATTENTION of the FARMING community and the public generally is called to the GREAT IMPROVEMENTS on the above make of Engines and Separators, which are surpassed by none for threshing grain, and are specially adapted to the use of Farmers.

Improvements on Russell's Separator.

THE SEPARATOR has been increased six inches in width, the sieves being much enlarged, to correspond; the 33 inch Cylinder now having a 40 inch Sieve, being six inches larger than the old style; and the 36 inch Cylinder Sieve has been increased six inches, and is now 48 inches, which greatly enhances the capacity of the Machines.

HAINES' HEADERS

With Doane's Adjustable Reel.

IN OFFERING these SUPERIOR HEADERS to the Farming Community of California, we can safely say that we have now brought the HEADING MACHINE to as near perfection as is possible.

THE MOST USEFUL MPROVEMENT YET MADE!

WHICH is a simple arrangement for Raising and Lowering the Reel some 18 inches, so as to enable the REEL to reach lodged grain, different lengths of stalks, and to be used in windy weather without stopping the Machine, and the consequent loss of time and labor in adjusting the old style Stationary Reel, which took some FIFTEEN MINUTES. The belts are always of the right length, and you can adjust the Reel to any grain with the greatest ease,

AND WITHOUT LOSING A MINUTE'S TIME!

THE GREAT point in our New Headers will commend itself to all purchasers, and no other Headers will be used when the great merits of this improvement are known.

CAUTION.

ALL PERSONS are Cautioned not to infringe upon our Patent Adjustable Reel Headers, as they will be prosecuted.

EARLY ROSE POTATOES.

A Splendid lot of these,

Best of all Early Potatoes,

And raised here in California, can be had at the

New York Prices.

We invite all Potatoe growers to call and see them at our office, where we can show them a sufficient number of testimonials as to their Quality and Productiveness to convince all that the EARLY ROSE is the very

BEST EARLY POTATOE KNOWN.

One of the grand features of this wonderful Potatoe is that it succeeds most admirably in high, dry lands—Some grand results we have here in reports now to be published.

Those who want Pure Seed of California growth, and at New York rates or what it would cost to bring them here, can have larger, fairer and fresher Seed than any that can be imported.

For Sale at FARMER OFFICE,
320 Clay Street, San Francisco

GOLDEN EAGLE HOTEL.

Corner Seventh and K streets, SACRAMENTO.

SHADOWS.

BY ALICE CARY.

When I see the long wild briers
Waving in the winds like fires,
See the green skirts of the maples
Barred with scarlet and with gold,
See the sunflower, heavy-hearted,
Shadows then from day's departed
Come and with their tender trembles
Wrap my bosom, fold on fold.

I can hear sweet invitations
Through the sobbing, sad vibrations
Of the winds that follow, follow,
As from self I seek to fly—
Come up hither! come up hither!
Leave the rough and rainy weather!
Come up where the royal roses
Never fade and never die!

'Twas when May was blushing, blooming,
Brown bees, bluebirds, singing, humming,
That we built and walled our chamber
With the emerald of the leaves;
Made our bed of yellow mosses,
Soft as pile of silken floxes,
Dreamed our dreams in dewy brightness
Radiant like the morns and eves.

And it was when woods were gleaming,
And when clouds were wildly streaming
Gray and umber white and amber,
Streaming in the north wind's breath,
That my little rose-mouthed blossom
Fell and faded on my bosom,
Cankered by the coming coldness,
Blighted by the frosts of death.

Therefore when I see the shadows,
Drifting in across the meadows,
See the troops of summer wild birds
Flying from us, cloud on cloud,
Memory with that May-time lingers,
And I seem to feel the fingers
Of my lost and lovely darling
Wrap my heart up in her shroud.

I HAVE NO MOTHER NO.

I hear the soft wind sighing
Through every bush and tree,
Where now dear mother's lying
Away from love and me.
Tears from mine eyes are starting,
And sorrow shades my brow,
Oh, weary was our parting—
I have no mother now!

I see the pale moon shining
On mother's white headstone;
The rose-bush round it twining,
Is here like me—alone
And just like me are weeping
Those dewdrops from the bough;
Long time she has been sleeping—
I have no mother now!

My heart is ever lonely,
My life is drear and sad;
'Twas her dear presence only
That made my spirit glad.
From morning until even,
Care rests upon my brow;
She's gone from me to Heaven—
I have no mother now!

THE BEAUTIFUL.

Think not that God hath covered the hills with
a soft, green robe, or the meadows with their
h, flowing grass, interspersed with pure lilies,
naught but the eye of an unthinking gazer to
upon.

very spear or blade of grass hath its name and
ire. Every bud hath its sweetness, and every
er, bush and tree hath its separate mission on
h, and doth fulfill it. The beautiful harmony
nature manifests the inanimate love of earth for
source whence it came. Become familiar with
outward beautiful, and the inward beauties of
spirit will expand more and still more rapidly.
ivate a taste for that which can but elevate
h in the sight of God and man. Let thy labor
truthful, and thy reward will be beautiful as
h understood in purity. Let thy desires center
hat which should be the desire of every one
earth, to glorify God by the elevation of man.

PRINCE ARTHUR.

Prince Arthur has sent to Miss Minnie Sher-
, daughter of General Sherman, a chaste and
ly gold medallion, having his likeness on one
and that of Queen Victoria on the other.—
companying the gift was a delicately-worded
, in which the Prince begged that Miss Sher-
would accept of the medallion as a token of
appreciation of the generous hospitalities he
experienced at the house of her father, and as
light tribute to the beauty of American women,
which she was so striking an exponent. Hand-
ely said.

A LUXURIOUS BATH

trangers to our City, and all persons should
fail to visit and enjoy the famous Turkish and
man Baths of Dr. Zeile, on Pacific Street, that
one of the luxuries that should be enjoyed
every week.

Those who are planting Gardens, and wish *col-

FACES WE MEET.

We ask the attention of our reader to the following most interesting essay on *faces*. There is so much of truth in it, and so much that should instruct and guide us in our intercourse with the world, that we feel it to be important as a lesson of value.

There are faces that affect us pleasurably, and faces that affect us painfully, and we should advance our own happiness greatly if we should never bring ourselves in contact with those who pain us.

All can recall the face and features of WASHINGTON, the Beloved Father of his Country—his glorious face creates in the mind of all who look upon it only feelings of Reverence and Love. So with many other faces. The good and noble Lafayette, Webster, Clay, Calhoun, the Adamses, and many others, all inspire with reverence and respect the remembrance of these men, all awaken the better feelings.

Recently we had in our midst another remarkable face, that of Ole Bull, a face to look upon and to love, a face of manly beauty, bespeaking a noble and generous heart which gave to that face that sunlight rarely seen upon the human face Divine. A face that those who knew him best and enjoyed his high and noble friendship made an impression that was left forever in the soul.

Ole Bulls face was one of those *interesting faces* spoken of so tenderly in the last paragraph in this essay. Those that remember his last Testimonial Concert, can remember his emotions at the farewell, as he played "Home Sweet Home."

This was his last, his Farewell strain,
Such as we never may hear again,
It breathed from his heart in Friendship and love,
And seemed like sweet music from Heaven above,
He bade us farewell, but in memory yet,
We will cherish the Friend, *we can never forget.*

A fair writer—a lady, doubtless—prints the following pleasant thoughts on faces in the N. Y. *Sunday Times*. We are pleased to find the subject attracting so much attention everywhere among intelligent people. The time is coming when we shall all *know* each other at sight.

Nature utters no such riddles as she delivers to us from the streets. There she confronts us with the presence of an aggregate life, and her sayings are like dreams filled with confused meetings and undeterminable shapes. What are all mysteries compared to the mystery of human faces?

There are faces which we meet in the streets into which has passed a subtler mystery than the mind can think on. They belong to that highest type of face of which the standard is thought.—They are of the order of face that provokes speculation while it repels it. We would give something to know whence comes that subtile thing which has so marvelously incorporated itself with the physical lineaments. It may be born of trouble—a trouble that has fastened upon the face, and tossed it into beauty as the wind makes beautiful the snowflake. Trouble there surely has been; for there is no mystery without sadness; and the sad mystery of these faces must have been wrought by the vexing of years. There are faces that seem wanting in depth, albeit they are full-fraught.—Such faces are falsehoods, yet they are false unknowingly. They cannot speak the mind; the lineaments are of the hardest marble; Nature's chisel has worked dexterously enough its part, but life has failed to penetrate the granite front. It has avenged its incapacity by certain deep seams, but all delicacy is wanting. We miss the luminous effect—the shining of the soul behind. Such faces come upon us rudely, but not with the disappointment of immaturity. The full fruition of a divine art is there, only its coarseness blunts our sympathetic perception. Yet we need not forget that to the cunning eye God is as visible in the rude root as in the rose. Nay, He symbolizes His workmanship by what is false and fair. The scowl of the murderer, the greeting of lovers' eyes are the productions of the same Art, each exquisitely perfect in its kind.

There are faces that haunt the memory; where met, when encountered, may not be recalled.—They stand out from the darkness of night, and fade and faint along the dreams of sleep. You have seen them in the street, but did not pause to consider them at the time. There was nothing indeed, so it seemed, about them to startle you into attention. It is only when they reappear that they surprise, or alarm, or terrify.

There are faces to be encountered all dispassionate, save in the eyes, which burn with the passions that deny their intelligence to the face. When the wearers of such fleshy masks die, their souls escape through their eyes. They would find them the only outlet. With other men the spirit might depart as the perfume departs from the flower. The soul seems to chafe at being pent up within such narrow limits as the eyes. You can see it dilating and contracting upon the keen retina, as one who approaches a window to find egress, and retires, and returns again and again.

There are faces which all men meet, which all men know, which all men love. When they reappear unto the eye they do not haunt, they soothe. They are ministering faces; faces which seem crowned, like a saint, with a halo of light of whose subtile irradiation the heart is alone sensible. In such faces is to be found no personification of the darker emotions of life. The lips and the eyes are genial with a tenderness to which wisdom has imparted the exquisite refinement of a faint sadness. Such faces cannot offend, either in their rejections or in their beseechings; either in their gladness when confronting despair, or in their peacefulness when opposing anger, nor in their love when facing hate. Upon them humanity has stamped its fairest impress. They are not more describable than faces which are weird, or cunning, or intellectual, or haughty, or depraved.—But they embody the idealism all thinkers on the Madonna, all painters of Charity, all dreamers of some sweetest achievement of God strive to realize. Nor let them be held impossible because of this faultlessness of expression, or non-existent because they are rare.

A BLUSH—WHAT IS IT?

What a mysterious thing is a blush! That single word or look, or a thought, should send that inimitable carnation over the cheek, like the soft tints of summer sunset, is the strangest thing in the world! Strange, too, that it is only the face—the human face—that is capable of blushing!—The hand or foot does not turn red with modesty or shame, any more than the glove or stocking which covers it. The human face is the heaven of the soul, where may be traced the intellectual phenomena, with a confidence amounting to a moral certainty. A single blush should put the infidel to shame, and prove to him the absurdity of the doctrines of chance. This single phenomenon is a demonstration of physiognomical science.

What is it that so skillfully touches this beautiful instrument? What is it that enjoys as well as actuates, receives as well as communicates through this inscrutable organization? It is, as we have said, the soul or spirit, without which this body were more unmeaning than a statue, and only fit, as it would tend to decay. It is the soul which animates the features and causes them to present a living picture of each passion, so that the inmost agitations of the heart become visible in a moment, and the wish that would seek concealment betrays its presence and its power in the vivid eye, while the blood kindles into crimson with a thought that burns along the brow. It is this which diffuses a sweet serenity and rest upon the visage when our feelings are tranquilized and our thoughts abide with heaven, like the ocean in a calm, reflecting the peaceful glories of the cloudless skies. This indwelling spirit of power blends our features into unison and harmony, and awakes "the music breathing from the face" when in association with those we love, and heart answering to heart, we live in sympathy, while memory and hope repose alike in smiles upon the bosom of enjoyment. It is a flame from heaven, purer than Promethean fire, that vivifies and energizes the breathing form. It is an immaterial essence, a being that quickens matter and imparts life, sensation, motion to the intricate frame-work of our bodies; which wills when we act, attends when we perceive, looks into the past when we reflect, and not content with the present, shoots with all its aims and all its hopes into the futurity that is forever dawning upon it. Again we repeat, that a single blush upon "the human face divine" should put to shame the absurd believers in the doctrines of chance.

DEATH OF MISS KATE W. PAYNE.

It is our sad duty to chronicle the death of Miss Kate W. Payne, of San Francisco, Cal., who died very suddenly at the Arlington House, Washington, D. C., on the afternoon of the 24th inst., under very singular circumstances. It seems that Miss Payne has for a few days been unwell, apparently suffering from diphtheria. For this disease her physician, Dr. Bliss, was treating her, although not considering her malady in any manner serious. On Thursday, Dr. Bliss being in the neighborhood of the hotel, invited Dr. J. H. Thompson to accompany him to visit his patient.

Together they went to the lady's room, and after Dr. Bliss had conversed with her a few minutes, Dr. Thompson approached and felt her pulse; then stooped and placed his ear to hear the beating of her heart. Observing a very singular fluttering of that organ he inquired of Dr. Bliss if he had noticed it. The doctor answered that he had not, and was approaching the lady, when she sank back. Dr. Bliss exclaimed, "she is dying," and reached her just in time to save her from falling to the floor. In two minutes she was a corpse, her death being caused by paralysis of the heart.

Miss Payne was in the twenty-second year of her age at the time of her untimely death. She was noted for her cheerfulness and kindness of deportment, and her numerous friends will miss the face, always attractive for its superior goodness, and a heart which overflowed with purest charity and womanly tenderness. The mournful circumstance will occasion many expressions of deep sorrow, for she was in the truest sense of the term, a universal favorite with all who knew her. She, in company with her mother, Mrs. N. Payne, and her two brothers, Theodore and Warren R. Payne, had just returned from an extended tour through Europe, of some three years' duration, and had decided, on their return, to make New York their permanent home; but before doing so concluded to participate in the gaieties of Washington during the present season, where the family were extensively known among the notables of the place. To the writer of this sad announcement she was a noble, kind, and even a considerate friend, and the remembrance of her will be deeply engraven on the sacred tablet of his memory. We mingle our heartfelt regrets at the sudden death which will cause so much sadness through a wide circle of friends in both the United States and Europe.—*N. Y. Evening Mail*, Feb. 28.

Santa Clara College, S. J.

SANTA CLARA, CAL.

Conducted by the fathers of the Society of Jesus.

THE NINETEENTH ANNUAL SESSION OF THIS INstitution will commence on THURSDAY August 19th, 1869.

TERMS—Tuition in the Classical and Scientific Departments; Boarding and Lodging; Washing and Mending of articles; School Stationery; Medical Attendance and Medicines; Pool, Light, Baths, etc., per session of ten months.....$[illegible]

NEW AGRICULTURAL BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS in those parts needing such illustration; so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

ALL ABOUT PUSSY.

Professor Schele De Vere has been writing for *Harper's Magazine* all about "Pussy," and his sketches will be found not only amusing but interesting. The Professor begins with—

PUSS IN LITERATURE.

After the days of persecution were over in Europe, cats ceased to appear in history, except on sorrowful occasions, when they were used to amuse men, and to exhibit man's incredible meanness. Thus, we are told by grave historians that Philip II. of Spain laughed heartily only once in his life. It was when, in the year 1549, he made his solemn entry into Brussels. Among other ingenious contrivances to amuse him, he was met by a wagon on which a bear stood before what seemed to be a large organ; but in reality it was a box containing twenty cats, whose tails were tied up to meet the keys of the instrument. When the bear was stirred up he would smite the keys, the keys would pull the tails, and the poor cats would cry piteously, while monkeys danced merrily to the sad, miserable music. And the king laughed! The same savage cruelty has been repeatedly shown to poor Pussy, and even this century has witnessed a similar cat concert, which was given in London.

Pussy finds ample compensation, it is to be hoped, in the almost universal tenderness and affection with which she is treated by women, and the fondness with which she has even inspired the greatest of men. Who does not know Tasso's charming sonnet to his cat?—one of the brightest among his smaller gems; and Petrarch is said to have loved his cat only less than his Laura; so that what he could not do for the latter he did for his pet—he had her embalmed, and kept her as long as he lived. Cardinal Wolsey never sat on his almost regal throne, when he officiated as Chancellor, without having one or two of his favorite cats by his side; and Richelieu's grim humor required the constant presence of a number of kittens, whose merry gambols alone could elicit a smile and soothe his temper. Chateaubriand was so passionately fond of cats that the Pope, to whom he went as ambassador, could not find a more suitable and acceptable present for the devout son of the Church than his predecessor's favorite cat; and when the great author was growing old he fancied he was also growing like his pets, from his close intimacy and great fondness. Nor have other authors disdained to sing the praise of Pussy: Canning, and Gray, and Cowper have left their tributes to their affectionate friends; Hoffmann introduced them into all his quaint and fantastic tales, of which "Kater Murr" is not the least attractive; Edgar Poe bore cheerful witness to their grace and strange attractions; and Victor Hugo rarely is seen without his magnificent Angora. Books on cats abound in almost every language, and only quite recently a French writer of some distinction—Champfleury—has published quite a superb work on the subject, from which we derive some of the illustrations on these pages.

PUSSY'S BAD REPUTATION.

It is, perhaps, due to the prominent position in which cats appear in Northern mythology that they were subsequently considered as the favorite companions of evil-doers. The Germans portrayed their beautiful goddess Freowa, whose smiles charmed through her overflowing tears, as drawn by white cats in her airy car. When these deities were subsequently excommunicated by zealous Christian priests, all such companions and pets fell into bad repute. Pussy seems to have suffered in this respect more than other animals; she became, as it were, the devil's own, and St. Dominick never preached of the Evil One without presenting him to his listeners under the form of a cat. It must be confessed that her thoughtful quietness, as if brooding over some deep scheme, her wicked green eyes, with their fiery sheen by night, her tendency to give out sparks when her fur is rubbed, and her cruel temper, all combined to impress ignorant and credulous people with a sense of fear and horror; so they tormented and persecuted her, and on St. John's Day, the day of witches, when popular belief had it that they all left town and village to accompany their fearful mistresses to the great witches' Sabbath, they burned a goodly number for their delight. Such was the custom in France for many a generation, while in Flanders they were wont to throw them from church steeple and tower. History tells us how Louis XIII., when a child, once begged of his father the lives of all that were to be thrown into the fire; but no chronicler reports whether the nine lives proverbially granted to cats ever saved them from cruel martyrdom. In the town of Ypres, at all events, this does not seem to have been the case, for there the barbarous custom continued till the year 1817! Since witches have gone out of fashion, cats have somewhat recovered their good reputation; perhaps this is to be ascribed to the fact that the French have given Pussy as a pet to the patron saint of lawyers, St. Ives, although Rabelais already interprets the association as by no means peculiarly creditable to the bar.

CATS IN CHINA.

The clever French missionary Huc, who, with his companion Gabet, first gave us an intelligent account of life in the interior of the Flowery Kingdom, was not a little surprised, and quite incredulous at first, when his Chinese friends told him that cats were their watches, and enabled them to tell, with unerring accuracy, the hour of the day. He learned, however, by careful observation, that this was really so; for he noticed that the pupil of every cat he saw, though wide open in the early morning, would gradually contract as the sun rose; at noon a perpendicular line of extreme delicacy, would be all that was left to be seen, and then the pupil would dilate again, to return to its natural size by sunset. And when poor Pussy has served her time as a dial, she is served up herself—not in disguise, as in French restaurants, but boldly and boastingly. In many a lowly house in town, and in almost every farm-house in the country, a number of cats are seen fastened to chains for the purpose of fattening them; and in the market-houses they hang in long rows, exhibiting their snowy whiteness, and with heads and tails carefully left untouched, to testify to their genuineness. Hence the fondness of the Chinese to introduce them in their illustrations of happy indoor life; while their strange neighbors, the Japanese, show here also their superiority, being fond of caricaturing the poor creatures, and making fun of them after their own manner.

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attaches to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Comb, or Gum;

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H.&L.

Is on the red cover of the packages

Railroad Lands.

CENTRAL PACIFIC RAILROAD,
LAND DEPARTMENT.

Sacramento, March 1st, 186

The following statement is made for the inform[ation] of those who desire to purchase Lands from said C[om]pany:

1st. Congress has granted to the Company the alternate sections of the public lands designated by odd numbers, within a distance of miles on each side of the railroad;—except lands to which a pre-emption or homestead claim had attached prior to the 12th of September, 1[862], and excepting lands reserved by the United States as mineral.

2d. The Company has no interest in even sections. To constitute a valid pre-emption or homestead claim within the above exception, the p[erson] must have resided on the land prior to September 12th, 1862, and continuously since that time. I[f] he must also on that day have been over twenty-one years of age and be the head of a family and [have] filed his claim in the United States Land Office within the time required by law. If he has throughout these requisites, or has neglected to file, he have to buy of the Railroad Company.

3d. All persons who desire to purchase lands from the Railroad Company, including settlers, pre-emptors, and other claimants, should make application to the Land Agent, B. B. Redding, at the Land Office of the Company, in Sacramento, either personally or by letter, describing the land by legal subdivisions. This application will be filed and the party will be allowed three months to complete the purchase, and during this time the land will not be sold to another without notice being such applicant thirty days previous notice. If the purchase is not completed within three months, the land will be open to purchase by others.

4th. Persons who have valid pre-emption or homestead claims to any tract on an odd numbered section, can purchase the same from the Railroad Company at the Government price of $1.25 per acre in greenbacks, and upon the usual credit of five years if they so desire, by filing an abandonment of their claim in the U. S. Land Office, blanks for which will be furnished by the Land Agent of the Company. Such purchase from the Company has these advantages over a purchase from the Government: The party can leave the land when necessary—he can sell or mortgage it—he is saved the payment of lawyers' fees and expenses of witnesses to go to the Land Office to "prove up" his claim—he can get his title perfected in less than a year—and he can buy on credit at a low rate of interest.

5th. Actual occupants of lands belonging to the Company, will generally have a preference in the purchase at the regular price. No additional charge in the price is made where there are improvements on the land made by the settler. Where there are conflicting claimants who apply to purchase, an adjudication of their respective claims will be made by the Land Agent, upon due notice given to both parties.

6th. No lands are sold by the Company to Government, until after they have been surveyed and the plats returned to the Land Office.

7th. The Company sells ordinary agricultural lands at $2 50 per acre, in gold (except sales to pre-emptors as above). Timber lands, lands in the immediate vicinity of the railroad, and tracts having special value above ordinary farming lands will be sold at prices and on terms fixed by the Board of Directors.

8th. Persons desiring to do so can buy on credit of five years by paying twenty per cent. of the price down, and interest annually in advance on the remainder at ten per cent. per annum. Thus a purchaser of one hundred and sixty acres at $2 50, which amounts to four hundred dollars, will pay twenty per cent., or eighty dollars, and by the interest on three hundred and twenty dollars, which is thirty-two dollars—in all one hundred and twelve dollars, paying each year thereafter thirty-two dollars interest, and the three hundred and twenty dollars at the end of five years. The above-three hundred and twenty dollars can be paid at any time within the five years, but not by installments, and the purchaser will then be immediately entitled to a deed.

9th. Applications to purchase lands can be filed in the Land Office of the Company at any time after the same have been surveyed by the Government; but no applications will be acted upon until three months after the maps have been filed in the United States Land Office. Occupants of the railroad lands who desire to purchase should therefore be prompt in filing their applications in the office of the Company within that time. Blank applications will be furnished to all who desire to purchase. No sales will be made except by legal subdivisions according to Government surveys. Purchasers can buy as large or small amount of land as they may wish.

10th. No sales are made by the Company until the land is listed over to it by United States Land Officers. Purchasers are thus assured that the title they obtain is perfect.

B. B. REDDING,
Land Agent C. P. R. R. Co., Sacramento.

THE LAWS OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.

2. If subscribers wish their papers discontinued, publishers may continue to send them until all charges are paid.

3. If subscribers *neglect* or *refuse* to take their papers from the office or place to which they are sent, they are *held responsible* until they *settle* their bills and give notice to discontinue them.

4. If subscribers move to other places without informing the publisher, and the paper is sent to the former direction, they are held responsible. Notice should always be given of removal.

5. The courts have decided that refusing to take a paper or periodical *from* the office, or removing and leaving it uncalled for, is *prima facie* evidence of intentional fraud.

Postmasters would oblige by a strict fulfillment of the regulations requiring them to notify Publishers, once in three months, of papers not taken from their office by subscribers.

Under the law of Congress, papers are sent, besides charged postage in the county in which they are published.

Corrected Weekly, by EDITOR FARMER.]

GRAIN AND FLOUR MARKET.

SAN FRANCISCO, March, 17.

rain comes in more freely, now that the rivers are n, and it will be noted that quite large parcels om high-up river localities, and Grain, too, as it were, laid dead for a whole season, for, if ners say the waters were low last harvest-time, could not send it to market, there was another which they would have them realized.

last harvest there was a speculative feeling ld have prompted men in the trade to have ht that Grain, and taken the chance of getting rket. Then was the time for the Farmer to have nd the same Grain is on hand to-day, and at enty cents the cental less,—besides loss of risk and storage, etc. The lessons of the past, , will prompt our Grain-growers to take the at harvest season and sell. A careful revision ts for the last *fifteen* years will show to them er to sell at harvest season always, for only one in ten or twenty years of any rise that will pay run by a Farmer. The merchant and speculake their profits by chances—the Farmer by ; therefore it is not wise for them to take any but to act safely.

iverpool quotations are a little better, but only a. per cental, and this not certain to be permahis little rise will not affect our market. Proall kinds is plenty, and prices about the same week.

ite rains have stimulated to more plowing and nding, and wise Farmers will run their plows as possible, to prepare land for another year.

MEATS.

Our Meat market is fully supplied. A lot of cattle from Texas have arrived in our State to feed us, but in poor condition. Why can we not raise our own cattle? This importation is no credit to us. Beef, Mutton and Veal still hold up; young Lambs have just made their appearance; this makes the role complete—we shall not starve.

PREMIUMS.

THE EARLY ROSE POTATOE.

The wonderful celebrity which is now being attained by the unprecedented excellence of the "Early Rose Potatoe," its great productiveness beyond that of any other potatoe known, its early maturity (7, 8 and 9 weeks) surpassing all others, and its great superiority in *quality*, induces us to try to spread its culture as widely as possible.

We therefore will now offer to every *new* subscriber to the CALIFORNIA FARMER, from the commencement of our new Volume, Four poundsof the "Early Rose Potatoe," mailed to them *free of cost*, as a PREMIUM for 1870. This will give them seed for another year, equal to 200 to 300 lbs.

P. S. All new subscribers to our present Volume who kindly sent their names before this, if they will send us word they will use this seed they shall have the parcel mailed to them free.

TYPE FOR SALE.

The Type which now prints the FARMER will be offered for sale, as we intend to print on NEW CALIFORNIA TYPE.

The quality of the Type can be seen by reading the FARMER. Any one wishing a good bargain can have one by calling at once at our office, or addressing EDITOR FARMER.

Sample Trees can be seen at the FARMER OFFICE, where information of the quality of the Trees and the price can be had.

A. P. SMITH.

Of the well known SMITH'S GARDENS,

Sacramento City, Cal.

COMMISSION SALES-ROOM —AND— Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery.

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns, and which we have the exclusive sale for this Coast.

We also call attention to the

NEW GATE.

A most valuable invention, particularly to Farmers and Stock Raisers. County Rights for sale.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

The following are the kind of Goods imported or consigned to us for sale and which can be offered on the most favorable terms:

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence. In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown.

FINEST MIXED LAWN GRASSES,
FINEST MIXED GRASSES FOR PERMANENT PASTURES.

FINEST MIXED GRASSES FOR SHEEP-WALKS
FINEST MIXED GRASSES FOR MEADOW-LAND.

PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR CHILI CLOVER,
KENTUCKY BLUE GRASS.
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental

TREE SEEDS.

TOBACCO SEED,
COTTON SEED,
COFFEE SEED,
TEA SEED.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

These will be ready in the months of November and December.

Collections can be forwarded by post at the following rates:

50 Packets choicest and best	$10 00
25 do do do	5 00
13 do do do	3 00
50 Packets Good Selected	6 00
25 do do do	3 00
12 do do do	1 50

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference.

Silk Culture:

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

FLOWERING BULBS.

Lilies, Tulips, Hyacinths, Amaryllis, Anemones Ranunculus, Narcissus, Tuberoses, Peony-Roots, Crocus, Snow-Drops, Very Choice Gladioli,

Choice collections of Flowering Bulbs, comprising all the most showy and leading varieties from $5 00 and upwards,

EVERGREEN AND DECIDUOUS SHRUBS, ORNAMENTAL TREES.

FRUIT TREES.

The newest and most approved sorts:

Peaches, Figs,
Plums, Almonds,
Cherries, Walnuts,
Apricots, Nectarines,
Pears, Grapes,
Apples, Etc. Etc.

Also the best varieties of Strawberries, Raspberries, Gooseberries, Currants, and Blackberries.

PERPETUAL FLOWERING ROSES

Of the best kinds.

GREENHOUSE AND BEDDING PLANTS.

Any one desirous of having their Gardens look gay through out the season, can be furnished with the plants at a reasonable rate, by applying at this office.

Every information given as to the cultivation of Plants and raising of Seeds, etc. Also respecting the mode and best systems of Pruning all varieties of Trees, etc.

Gardens and Grounds designed and put in order, and every article furnished for same.

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference.

WARREN & CO.,
Farmers' Headquarters. 320 Clay Street, up-stairs.

SPLENDID PREMIUMS!! 1870!

OUR SEVENTEENTH YEAR AND THIRTY THIRD VOLUME OF THE

"California Farmer."

With the New Volume in January we begin our SEVENTEENTH YEAR of LABOR with this Journal.

THE CALIFORNIA FARMER PREMIUMS.

The CALIFORNIA FARMER will club with the following Magazines and Journals, and furnish them for the year 1870 at the following rates.

The New York Independent, PREMIUM ENGRAVINGS.

The California Farmer and the Independent both for $7 50, and to present them with Richie's splendid steel engravings of GRANT and COLFAX, the price of which is $2 each, thus giving them these two Splendid and Popular Pictures worth $4, and both these Papers for $7 50

The CALIFORNIA FARMER and the New York Christian Union, new series, Edited by Rev HENRY WARD BEECHER, $7 50

The CALIFORNIA FARMER and the Harper's Monthly, Weekly and Bazar, $14 00

The CALIFORNIA FARMER and either of Harper's Magazines delivered post paid $4 50

The CALIFORNIA FARMER and the New York Weekly Tribune, $6 00

The CALIFORNIA FARMER and the American Agriculturist, $6 00

The CALIFORNIA FARMER and the New York Monthly Horticulturist with extra Steel Engravings of "Country Life," $7 00

The CALIFORNIA FARMER and the Phrenological Journal of New York now in its 50th Volume, $7 00

The CALIFORNIA FARMER and the American Stock Journal, $5 50

We shall add others with our next issue.

Any other Journal or Periodical desired we will furnish with the FARMER on the most liberal terms when desired.

The Terms of the FARMER will remain the same—$5 per year, $3 for six months, (gold price) and $1 extra when payments have been delayed; and these terms are unchangeable. A liberal allowance for clubs; when five copies are paid for six copies will be furnished.

We call attention to the Premiums offered, and the Union of other Journals with ours.

WARREN & CO., Editors and Publishers
320 *Clay St.*, San Francisco.

REASONS WHY EVERY FARMER AND STOCK-RAISER SHOULD TAKE THE "CALIFORNIA FARMER."

1st. Every Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State.

2d. Every such person should give his sanction and support, generously and voluntarily to the Journal that advances his own particular business in his own State.

3d. Every such person is *benefitted* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and the Stock-raiser will always be better advised of the markets, and the kind of information so important to his interests by constant access to a "Home Journal."

6th. The *California Farmer* has faithfully advocated the best interests of the Farmer and Stock-raiser for sixteen years steadily and is the only *Agricultural Journal in California.*

7th. The *California Farmer* contains the most important information relative to these interests in every branch of Agricultural science.

8th. The *California Farmer* contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The *California Farmer* contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the Weekly Market Reports of all the interests appertaining to Agriculture.

10th. The *California Farmer* is now the *only paper* on the Pacific Coast that is continued by the *original Editor and proprietor*, commencing at the time this Journal commenced; and has therefore been constant in its efforts for the good of these interests, deserves the cheerful patronage of all engaged in industrial pursuits, and of all good men.

PACIFIC ANATOMICAL MUSEUM,

....AND....

GALLERY OF NATURAL HISTORY AND SCIENCE,

Eureka Theatre, Montgomery Street.

This truly elaborate and magnificent collection of all that is strange, wonderful and curious in SCIENCE, NATURAL HISTORY, AND ART, is now open to the public.

Extensive embellishments and improvements have been made. The additions will include an immense collection in BOTANY, ICHTHYOLOGY, and ENTOMOLOGY.

COMPARATIVE, FLORAL, AND BOTANICAL ANATOMY will be largely illustrated, and form a leading feature of the Institution. Every exertion has been used to render this superb collection the most INSTRUCTIVE, AGREEABLE, and USEFUL IN THE WORLD.

INSECT AND ANIMAL LIFE will be beautifully displayed, and the celebrated Du Chaillu GORRILLA which was exhibited ALIVE in Paris, has been added to the already rare collection of HUMAN AND COMPARATIVE ANATOMY.

Open daily from 9 A. M. to 5 and 7 to 9 P. M. Sundays from

CALIFORNIA FARMER AND JOURNAL OF USEFUL SCIENCES.

VOLUME XXXIII. SAN FRANCISCO, CALIFORNIA: THURSDAY EVENING, MARCH 24, 1870. NUMBER 10.

The California Farmer AND Journal of Useful Sciences.

PUBLISHED EVERY THURSDAY EVENING BY WARREN & CO:

OFFICE—*No 320 Clay street (up stairs), below Battery* SAN FRANCISCO.

TERMS OF SUBSCRIPTION.

By mail, for one year, $5; for six months, $3 For a Club of five new subscribers, a sixth copy will be sent gratis. When payments are delayed six months $1 additional per year will be charged, and $1 each year also for every year delayed.

City subscribers, delivered by carrier, 12½ cents a number or $6 a year in advance.

☞ Advertisements and Subscriptions must be paid for in advance. Payments in Gold or Silver.

☞ All letters on business connected with the office should be addressed to WARREN & Co. PUBLISHERS.

San Francisco, Cal.

LIST OF AGENTS:

Our Subscribers can send money by mail safely Register at the Post-office, and the money will come direct and sure.]

BUTCHERS STALLS, MEATS, FEED, ETC.

One word more, French butchers do not sell the offal, this being the perquisite of the slaughter-house men, it is disposed of by a different class.—In place of hideous heads, hearts, livers, and lungs; the butchers' shops are graced with dwarf shrubs, bouquets and fantastically cut paper.—Neither do they sell pork—this commodity is delegated to the honorable guild of pork-butchers and sausage makers, who present every morsel of the animal for sale, that can be penetrated by one of human nature's thirty-two teeth.

Since fifteen years, the conductors of the experimental Farms in Germany, have been occupied with the question of the connection between the food supplied to black cattle, sheep and swine, and its transformation into muscle and fat, and to fix the conditions by which an animal can assimilate, in the shortest time, the largest amount of fatty and nitrogeneous matters, from certain articles of food—for it is now known, that in the animal economy, no particle of primary matter is formed by the animal *per se*, that is, that all the carbon, hydrogen, oxygen, nitrogen, phosphorus, lime, etc., have been denied extensively—in the food. The experiments of Henneberg, Stokman, and Rautemberg have had for end, to ascertain the digestibility of the straw of the various cereals—hay, clover—quality and quantity—and the influence exercised on them, by the addition of substance easily assimilable, such as sugar, fecula, and bruised beans.

Two oxen of the common breed of the country, were selected—aged 5 years each, and as equal as possible in temperament. They were weighed at the commencement of the experiment—their food was analysed—their liquid and solid excrements also, from day to day, to test the qualities of matters appropriated by the system, in the promotion of meats and fat, and *per contra*, that rejected, as used or indigestible. In the economising of forage nothing was gained, after a certain point, by increasing or diminishing the supply. In the case of wheaten straw, 20 per cent of its primary matters were absorbed, and in the case of upland hay, 60, but the *mean* average of the substances assimilated from wheaten, oaten, bean straws, clover and natural meadow hay, was 50 per cent—the indigestible, rejected matter being ligaine. The addition of matters easily digestible, as crushed beans, sugar, turnips, oil etc., causes the above forage to be digested and assimilated, with singularly different results—but that an alteration in the dietary, produces, during same day, a depressive action. The fluctuations in the weight of the animal, by changing from one kind of food to another, were traceable to the variation in the contents of the intestines—for while wheaten straw took thirty longer to digest than clover hay, and the latter longer than meadow hay, it was five days before the last traces of the old food disappeared in the excrements, after the commencement of a new diet. During the experiments, the pulsations of the animal, varied from 30 to 70 per minute—the result, not of the surrounding temperature, but in the respective actions of the varied food.

AGRICULTURAL SOCIETIES, SURVEYS, ETC.

Rhenish Prussia, has long been famous for the perfect and cheap organization of its Agricultural Societies, each in connection with the Central Society, and kept duly informed, of all matters taking place in the Agricultural world. There are ambulatory professors—practical instructors, as well as scientific lecturer, pass from Village to Village, sowing instructions. New progress has to be noted. Seeing the small cultivator has the victim of usurers, the Farmers of the commune clubbed their savings, and loaned out the money to the deserving, on conditions mutually advantageous and secure. Five years ago, duly ten such Banks existed, to day, their number is 120—Germans are proverbially patient and plodding—these local Agricultural Societies have also formed within themselves—"Mutual Cattle Assurance Companies"—400 of which now exist—the best evidence of their success.

Napoleon the First said, that he who would carry out a successful trigonometrical survey of France, with a land valuation, would deserve a statue. Not a great thing now a days, when so many are erected to "fame unknown." France did make the territorial survey, after a labor of forty years, and an expenditure of 160 millions of francs—but the work is unreliable, and must be done over again.

DISTILLING, BEET ROOT SUGAR, ETC.

A French distiller has patented a process by which he forms the refuse of the distillery into cakes, and exports them. The manufacture of beet sugar takes every day more extensive proportions. A large factory has just been erected some thirty miles from Paris, and "pipe is being laid down," to the extent of 20 miles, by which the roots as pulped can be sent along the tubes, from the surrounding country to the central manufactory.

SPARE THE BIRDS.

Our little "feathered friends" are coming in for hard times—not from the frost and snow, which are bad enough, but in consequence of the debate raging as to their utility to the Farmer.—Some are for a massacre of the innocents at once, to prevent their destructive powers at seed time and harvest, and others are for their preservation, as the most valuable of insect destroyers. It must be confessed, that the results of various *post mortem* examinations, warblers and no-warblers, indicate their tastes to be decidedly grain and seed-words.

HORSE FLESH AS FOOD.

Paris is decidedly making way in its taste for horseflesh—not in a turf point of view—but a gastronomic one. The fact of the capital consuming 5475 horses in the space of two years and a half, indicates the development of the new taste. The horse flesh butchers demand to be allowed to sell, at the same time, veal and mutton. The time has come to remember the plan just propounded by an eminent "Vet"—M. Zundel, to distinguish between beef and horse flesh. Ordinarily, but not always, the latter is of a darker red and the fat of a deeper orange, than the former; but by cutting the flesh of either, into morsels, pouring thereon sulphuric acid, and stirring the mass with a glass stick, the flesh of the horse will smell of the stable, and that of the cow, of the shed.

TRUFFLES—THRASHERS, ETC.

The cultivation of truffles, is making an extensive progress in the South of France. Some people assert, that it is the cause of the vine disease. It thrives best in the neighborhood of oaks however. About 120 lbs is the average yield of truffles, per acre, which sell for about, 900 fr.—A curious circumstance about this tuberaceous plant—so rich in scute, as to be ranked equal to meat in nutritive qualities—it grows under ground and must derive its nitrogen from the soil.

Hand Threshing Machines, costing from 3 to 400 frs., are being largely bought up in France and Germany.

Our terrible winter has at last come to an end, and the French Farmers are hopeful it will rid them of the "grub."

CASTOR BEANS.

This article will become one of our most valuable crops; it will always pay.

We learn of several parties who are still planting the bean.

We wish to say here, that some parties have been prevented from planting the Castor Bean by reason of the reports that it would not open easily.

There are some species that we know requires great labor, they are so difficult to open or shell out, but with the "Illinois" or "Indiana" there is no difficulty, they shell out easily; as it were, "it shells itself."

It is to be hoped—as these Beans are much wanted, and sell readily at the Oil Mills—those that can will plant the seed and raise the Bean.

The young ladies of an Iowa town announce a "Love-making and man-choosing meeting, admission twenty-five cents."

Eastern Correspondence.

OUR LADY CORRESPONDENT FROM PENN.

LETTER NUMBER EIGHTEEN.

Green Tree, Pa, March 8th, 1870.

Dear Col.

I see that you, like the rest of the world, have a good word for *Vick's Catalogue and Floral Guide* I too, have a few words to say about this gem of Catalogues. But it seems like a mistake to class this little beauty with mere dry Catalogues, it is so much more.

The directions for making seed beds, planting and selecting flowers for different purposes, are invaluable to the beginner. Last Summer I made my first flowergarden, and my success was the wonder of the neighborhood, and I can truly say I owed it all to those instructions in that *Guide*—yes, and to the good seeds that accompanied it.—If any one will follow the rules laid down there and then buy seeds of Mr. Vick, he will not complain of any difficulty of raising flowers, nor of dishonesty of Seedsmen.

We are all so sure that Mr. Vick will be glad to know how our garden grows, that we all as a matter of course write him the most circumstantial accounts of our success and disappointment, with the fullest confidence in his entire sympathy.

Indeed I owe him an apology for the ruthless way in which I have trespassed on his time and past time, and I here publickly make it;—Dear Mr. Vick, I am very sorry, and will not do so any more—if I can help it.

I am quite sure that he has set me down for a harmless lunatic long ago. The truth is, Peter is of no account whatever, as a safety valve for my enthusiasm, he wonders how people can make such a fuss about flowers, and so when those lovely things kept coming out—even more exquisite than the last—why I was quite wild with delight, and really I don't think I ought to be held responsible for all my doings at that time.

Even today, with the garden hidden under its mantle of snow, if I shut my eyes for a moment I can see it all as it was last Summer—the delicate blossoms of the Sweet Pea nod to their cousins, the Butterflies; and the cheerful Pansies, gay in purple and gold, smiles brightly up in the childrens faces.

Little darlings! I love them for their virtue of constancy, as much as for their beauty, they linger with us to the last and a few cling to the very skirts of Winter, and brave the frowns of January. But I must not neglect to tell you about a charming new acquaintance that I have made recently through the kindness of a thoughtful friend.

Tiltons Journal of Horticulture is its name and Boston is not its dwelling place exactly, but its starting place.

Do you know there is an article on the "Treatment of the American Grape vine," in the Novem ber number, that will please you I think, it is the most suggestive essay on the subject that I have met with.

The October number contains an article by Henry Ward Beecher about "Carnations and Hollyhocks," in the best vein of of this best writer on Horticulture. Have you read his Flower farming? it is original. Fancy the coming on of a colony of Pansies in the heart of a potatoe field! or a beet bed with a border of white Petunias.

But I cannot now stop to enumerate all the good things to be found in this Magazine—tell your lady readers to send for a copy and judge for themselves. It's handsome appearance is certain to please them, and their taste in this instance will not be indulged at the expence of their judgment, for Tiltons Journal appeals to both.

There! Mr. Tilton & Co., you ought to be obliged to me, I am sure, for such an excellent advertisement, unlike many of its kind, it is quite disinterested I assure you.

Yours truly. Jenny Dare.

SEND US SAMPLES.

We desire to procure *Samples* of every variety of Grain, Grass, and every Cereal, as well as *Samples of New Products*, and for these we shall be ready to reciprocate in any way desired. We will pay for them, or bestow a full equivalent in some *new Seed or Plants* that may be desired.

NATURAL HISTORY.

We desire specimens in Natural History Insects, Flies, Frogs, Toads, Snakes, Turtles, etc., preserved in spirits, or dried, and for these or any curiosity, will make due return. Send by Wells, Fargo and Co., to our Office.

THE FLAX CROP OF 1870.

We are glad to know that the Flax crop of 1870 will be a large and prosperous one. From many places we hear that it is now four and six inches high, and the *seed* a good one. Flax will be a very profitable crop to grow: the Seed finds a ready market at the Oil Mills, and the Straw is readily bought at the Cotton Factory at Oakland. Flax will become one of our best crops, and pay better than Wheat.

Home Correspondence.

WINE MANUFACTURE.

Editor California Farmer:

In your paper of February 24 you give an article on the New Tariff, from Wine Statistics of New York and our Native Wine Culture. Allow me to make some comments on it, and to quote some of the contents, which read as follows: "Therefore if the New Tariff raises the duty of the low-priced White and Red Wines of France, and the Wines from the German Wine Districts, from 26 to 50 cts. per gallon, it inflicts an injury to our Native Wine Culture; the latter has no other source for improving its products and making them marketable, than the importation of the cheap but ripened and developed Wines from Europe."

This argument may be very satisfactory to an importer of Foreign Wines in New York, he no doubt feels that his Wines are loosing ground on this continent, and if the duty should be raised on them from 26 to 50 cents a gallon, that it would virtually drive all the low-priced Foreign Wines out of the market, and that the importer's occupation would be gone.

Now let us see what we have done in this country in Vineculture, so far, and what we have accomplished.

Let us take the Atlantic slope first: Every attempt to cultivate foreign varieties of grapes there have signally failed. For a few years they presented a flattering prospect, but the changeable climate has invariably killed them. The only grape that ever lived was the Native Wild Fox (*Labrusca*), of which the Catawba, Isabella, Concord, Diana, Iona and others have sprung. The Catawba was largely cultivated, especially near Cincinnati, but soon developed a ruinous tendency to rot; the other varieties seem to be free from it, and are daily improved upon by endless varieties, of which some are right palatable for table grapes, but comparatively very little Wine is made of them; their market price for eating is, so far, too high to make them into a cheap Wine.

The Pacific slope seems to be more congenial to the improved varieties of Europe, and here they are flourishing even better than in their native homes. The Hock grapes from the Rhine, the best varieties from France, the Muscat of Alexandria, the Malaga,—in short, every kind of whatever country, grow to perfection; thousands of acres are turned into vineyards, producing about *six million gallons* of Wine and *two million gallons* of grape Brandy annually. There is no failure here—no sour grapes, and consequently no sour Wine. The vintners on the Rhine and in France have to bear many disappointments: rot, unfavorable seasons where the grapes don't ripen, and other causes make serious inroads into their incomes; they can expect only every fifth or sixth year a first-rate vintage. What Nature don't do for them they are trying to accomplish by Art.—Dr. Gall on the Rhine discovered, in 1854, that if saccharine matter is mixed with the grape-juice in seasons when the grapes don't ripen properly, a palatable Wine. Pallot, in France, found, later, that by the addition of grape-sugar, the quantity of Wine can be increased to double and treble, by working the pulp again. As the cane-sugar was too expensive, an artificial grape-sugar was invented from potato starch. Since the discovery of these processes, the Wine production of France and Germany has increased amazingly; no matter how the season may be, they still make Wine.—The manufacture of potato-sugar in France has increased to twenty-four million pounds a year; and in Germany half-a-dozen factories of the same kind flourish; their product is exclusively used for Wine-making. The Governments don't interfere, as those Wines are principally used for export. We are told to protect these Wines by a low Tariff. For these low-priced manufactured Wines the importer wants our California heavy Wines; he wants to mix and to improve his inferior compounds with them, and then to palm them off on a credulous public for a superior imported article, at a good price. If the Tariff is raised to 50 cents a gallon, only good natural Wines can be imported, and, with these California Wines, can compare and compete. The U. S. Government puts a tax of 50 cents a gallon on all Wine made by an addition of sugar or of alcohol. We can only make Wines from the natural grape-sugar, and have to compete against foreign countries that have the privilege of adulterating their Wines, both by sugar and spirit. The public have so long been accustomed to drink these sour Hock and logwood-extract Clarets, that it will take some time to accustom their palates to the taste of real natural Wine. California Wines will not only drive these foreign compounds out of the market here, but will—as soon as labor and capital gets cheaper—be a formidable rival on the continent of Europe.

We cannot omit to mention that, although we have superior grapes, yet the art of making them into a good marketable Wine is in a very crude state; few growers house and ferment the must properly; competent persons ought to be engaged for that purpose, and farmers ought to combine and unite to put up proper buildings and fermenting-houses. If fermentation is neglected, an inferior and often sour Wine will be made, even from the best grapes. A general correct idea of the treatment of Wine ought to be diffused throughout the whole country, and Agricultural Schools, as in Germany, be established, not for Wine-making alone, but Farming generally.

Yours respectfully,

C. G. F.

MATHEMATICAL QUESTIONS FOR THE HUMANE.

"Does the Agent Owe the Town, or does the Town Owe the Agent?"

Editor California Farmer:

A spirited and, in some instances, rather rude discussion with the above heading, has been a prominent feature among the items of the "*Daily Alta*," for some days past. With all due deference to the specimens of mathematical and business knowledge the readers of the paper alluded to have been favored with, during the time occupied in the solution of the above question, it might be well to ask, Of what benefit will the answer be to any one? Would not the time expended in this discussion, and the paper and type used for the same, be more profitably and charitably employed in discussing or devising some plan to give employment to the many worthy men, some of them having large families depending on them, and to whom the dulness of business and scarcity of money, has caused California to be anything but an "El Dorado."

Are there not philanthropists among us? Can not something be done to cheer these worthy but despondent men? There are many men wanting employment in this city at this time, whose influence is the kind needed in our young city,—men who are examples of sobriety, industry, and perseverance. Cannot men of wealth start some enterprise of usefulness and ornament to our city, that will give employment to those in want, and secure for themselves the approval of One at least who will receive them with, "Well done! thou good and faithful servant."

ANOTHER LETTER OF INQUIRY.

Mr. Editor:

Dear Sir—There has been a question in arithmetic discussed in the *Alta* for nearly a week, and many naughty expressions made use of by the disputants, in order to convince each other who is right and who is wrong. Now, if the above paper will only give the same amount of space, type and labor, and the gentlemen solving the above question the same amount of thought and meditation, in answering the following questions—they would confer a favor on many:

1. In order to provide employment or subsistence for the large number wanting such in our city.

2 To propose some plan by which our wealthy citizens might be induced to invest their surplus capital, for their own profit, and benefit of many seeking employment, instead of spending it at the East or in Europe.

3. Advance reasons of our present stagnation in business, and how to remedy such,—with any other suggestions you may feel disposed to offer. By so doing you will much oblige, and confer favors on many

Readers.

OUT-DOOR CULTURE OF SILKWORMS

Professor Black, of this city, read a translation of a French journal relative to the subject named, before the Academy of Natural Sciences, last Monday evening.

The following is his report of it:

"On account of the diseases prevalent amongst the silkworms in France, many experiments have been made in order to discover the best means of rearing them. The results obtained by M. Sintrac, and which were communicated to the Academy of Sciences in Paris, in September, seem to contain facts which may be useful for the sericulturists of this State. This observer found that silkworms succeeded much better when raised in the open air than when kept in close rooms. His idea up to the present time has been that the worms require to be kept at a high temperature, and carefully preserved from sudden changes. M. Sintrac finds, on the contrary, that they bear very well a temperature as low as 47 degrees and as high as 104 degrees; that they are not injured by the direct rays of the sun nor by sudden changes in temperature. They were not hurt by rain, nor even by thunder-storms. The disease that has been so prevalent amongst silkworms in Europe, and which has called for so large an importation of foreign eggs, is considered by the author to be caused by the worms being confined in too close rooms. The only shelter he gives them is an open shed, with roof sufficient to keep off the rain. The yield of silk seems very satisfactory, as 36 ounces of eggs furnished 372 pounds of cocoons, besides a large yield of eggs.

Agriculture.

WHAT I KNOW OF FARMING.

BY HORACE GREELEY.

ESSAY NUMBER TEN

DRAINING—MY OWN.

My Farm is in the township of Newcastle, Westchester County, N. Y., 35 miles from our City Hall and a little eastward of the hamlet known as Chapaqua, called into existence by a station on the Harlem Railroad. It embraces the south easterly half of the marsh which the Railroad here traverses from south to north—my part measuring some fifteen acres, with five acres more of slightly elevated dry land between it and the foot of the rather rugged hill which rises thence on the east and on the south, and of which I now own some fifty acres lying wholly eastward of my low land, and in good part covered with forest. Of this, I bought more than half in 1863, and the residue in bits from time to time as I could afford it. The average cost was between $130 and $140 per acre: one small and poor old cottage being the only building I found on the tract, which consisted of the ragged edges of two adjacent farms between the western portions of which mine is now interposed, while they still adjoin each other beyond the north and south road half a mile from the railroad on which their buildings are located and which forms my eastern boundary. My stony, gravelly upland mainly slopes to the west; but two acres on my east line incline toward the road which bounds me in that direction, while two more on my south-east corner descend to the little brook which, entering at that corner, keeps irregularly near my south line, until it emerges, swelled by a smaller runnel that enters my lowland from the north and traverses it to meet and pass off with the larger brooklet aforesaid. I have done some draining, to no great purpose, on the more level portions of my upland; but my lowland has challenged my best efforts in this line, and I shall here explain them for the encouragement and possible guidance of novices in draining. Let me speak first of

My Difficulties.—This marsh or bog consisted, when I first grappled with it, of some thirty acres, whereof I then owned less than a third. To drain it to advantage, one person should own it all or the different owners should coöperate; but I had to go it alone, with no other aid than a freely accorded privilege of straightening as well as deepening the brook which wound its way through the dryer meadow just below me, forming here the boundary of two adjacent farms. I spent $100 on this job, which is still imperfect; but the first decided fall in the stream occurs nearly a mile below me; and you tire easily of doing at your own cost, work which benefits several others as much as yourself. My drainage will never be perfect till this brook, with that far larger one in which it is merged sixty rods below me, shall have been sunk three or four feet at a further expense of at least $500.

This bog or swamp, when I first bought into it, was mainly dedicated to the use of frogs, muskrats and snapping turtles. A few small water elms and soft maples grew upon it, with swamp alder partly fringing the western base of the hill east of it, where the rocks which had, through thousands of years, rolled from the hill, thickly covered the surface, with springs bubbling up around and among them. Decaying stumps and imbedded fragments of trees argued that timber formerly covered this marsh as well as the encircling hills. A tall, dense growth of blackberry briars, thoroughwort, and all manner of swamp weeds and grasses, covered the center of the swamp each Summer; but my original portion of it, being too wet for these, was mainly addicted to hassocks or tussocks of wiry, worthless grass; their matted roots rising in hard bunches a few inches above the soft, bare, encircling mud. The bog ranged in depth from a few inches to five or six feet, and was composed of black, peaty, vegetable mold, diversified by occasional streaks of clay or sand, all resting on a substratum of hard, coarse gravel, out of which two or three springs bubbled up, in addition to the half a dozen which poured in from the east, and a tiny rivulet which (except in a very dry, hot time) added the tribute of three or four more which sprung from the base of a higher shelf of the hill near the middle of what is now my farm. Add to these that the brook which brawled and foamed down my hill-side near my south line as aforesaid, had brought along an immensity of pebbles and gravel of which it had mainly formed my five acres of drier lowland, had thus built up a petty swale, whereon it had the bad habit of filling up one channel, and then cutting another, more devious and eccentric, if possible, than any of its predecessors—and you have some idea of the obstacles I encountered and resolved to overcome.—One of my first substantial improvements was the cutting of a straight channel for this current and, by walling it with large stones, compelling the brook to respect necessary limitations. It was not my fault that some of those stones were set nearly upright, so to vex the brook rather than thoroughly constrain it: hence some of the stones undermined by strong currents, were pitched forward into the brook by high Spring freshets, so as to require resetting more carefully. This was a mistake, but not one of

My Blunders.—These, the natural result of inexperience and haste, were very grave. Not only had I had no real experience in draining when I began, but I could hire no foreman who knew much more of it than I did. I ought to have begun by securing an ample and sure fall where the water left my land, and next cut down the brooklet or open ditch into which I intended to drain to the lowest practicable point—so low, at least, that no drain running into it should ever be troubled with back water. Nothing can be more useless than a drain in which water stagnates, choking it with mud. Then I should have bought hundreds of Hemlock or other cheap boards slit them to a width of four or five inches, and, having opened the needed drains, laid these in the bottom and the tile thereupon, taking care to break joints by covering the meeting ends of two boards with the middle of a tile. Laying tiles in the soft mud of a bog, with nothing beneath to prevent their sinking, is simply throwing away labor and money. I cannot wonder that tile-draining seems to many a humbug, seeing that so many tiles are laid so that they can never do any good.

Having, by successive purchases, become owner of fully half of this swamp, and by repeated blunders discovered that making stone drains in a bog, while it is a capital mode of getting rid of the stone, is no way at all to make drains, I closed my series of experiments two years since by carefully relaying my general useless tiles on good strips of board, sinking them just as deep as I could persuade the water to run off freely, and, instead of allowing them to discharge into a brooklet or open ditch, connecting each with a covered main of four to six inch tile; these mains discharging into the running brook which drains all my farm and three or four of those above it just where it runs swiftly off from my land. If a thaw or heavy rain swells the brook (as it sometimes will) so that it rises above my outlet aforesaid the strong current formed by the concentration of the clear contents of so many drains will not allow the muddy water of the brook to back into it so many as three feet at most; and any mud or sediment that may be deposited there will be swept out clean whenever the brook shall have fallen to the drainage level. For this and similar excellent devices, I am indebted to the capital engineering and thorough execution of Messrs. Chickering & Gall, whose work on my place has seldom required mending, and never called for reconstruction.

My Success.—I judge that there are not many tracts more difficult to drain than mine was, considering all the circumstances, except those which are frequently flowed by tides or the waters of some lake or river. Had I owned the entire swamp, or had there been a fall in the brook just below me, had I had any prior experience in draining, or had others equally interested coöperated in the good work, my task would have been comparatively light. As it was, I made mistakes which increased the cost and postponed the success of my efforts; but this is at length complete. I had seven acres of Indian Corn, one of Corn Fodder, two of Oats, and seven or eight acres of Grass on my lowland in 1869; and, though the Spring months were quite rainy, and the latter part of Summer rather dry, my crops were all good. I did not see better in Westchester County; and I shall be quite content with as good hereafter. Of my seven hundred bushels of Corn (ears,) I judge that two thirds would be accounted fit for seed anywhere; my Grass was cut twice, and yielded one large crop and another heavier than the average first crop throughout our State. My drainage will require some care henceforth; but the fifteen acres I have reclaimed from utter uselessness and obstruction are decidedly the best part of my farm.

MANURING MARKET GARDENS.

All successful market gardners agree that it is hopeless to grow good crops, without a yearly application of manure in large quantities. Henderson's *Gardening* says:

"It is a grave blunder to attempt to grow vegetable crops without the use of manures of the various kinds. I never yet saw soils of any kind that had borne a crop of vegetables that would produce as good a crop the next season without the use of manure, no matter how rich the soil may be thought to be. An illustration of this came under my observation last season. One of my neighbors, a market gardener of twenty years' experience, and whose grounds have always been a perfect model of productiveness, had it in prospect to run a sixty-foot street through his grounds; thinking his land sufficiently rich to carry through a crop of cabbages without manure, he thought it useless to waste money by using guano on that portion on which the street was to be, but on each side sowed guano at the rate of twelve hundred pounds per acre, and planted the whole with early cabbages. The effect was the most marked I ever saw; that portion on which the guano had been used sold off readily at twelve dollars per hundred, or about one thousand four hundred dollars per acre, both price and crop being more than an average; but the portion from which the guano had been withheld hardly averaged three dollars per hundred. The street occupied fully an acre of ground, so that my friend actually lost over $1,000 in crop, by withholding $60 for manure. Another neighbor with a lease only one year to run, also unwisely concluded that it would be foolish to waste manure on his last crop, and so planted and sowed all without; the result was, as his experience should have taught him, a crop of inferior quality in every article grown, and loss on his eight acres of probably $2,000 for that season."

Those who are planting Gardens, and wish collections of choice plants, can buy them in quantities at a very low rate, if they visit the *Gardens Corner of Mason and Pacific Street*, in this city, or address [EDITOR] FARMER.

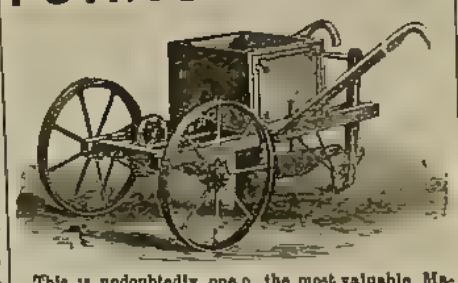
TRUE'S IMPROVED POTATO PLANTER.



This is, undoubtedly, one o the most valuable Machines adapted to Agricultural purposes ever introduced.

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such sized slices as the farmer may prefer; drops these pieces with the most perfect regularity, and covers them perfectly, and does all this as fast as a horse can walk over any ground that can be plowed

No intelligent farmer can [illegible] see that an implement with which one man can, with the aid of a horse plant six acres of potatoes in a day, is of inestimable value: because the days in which PLANTING can properly be done are very few, while he has all SUMMER and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attending to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor-Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune with it.

Particulars and Catalogues can be had at our office.

WARREN & CO.,

320 Clay street, up stairs.

Blackberries, Raspberries

STRAWBERRIES.

Those who desire to plant Small Fruits should call at our office, as we can supply very strong plants of the following:

KITTATINNY BLACKBERRIES,

WILSON'S EARLY BLACKBERRIES,

BLACK CAP RASPBERRIES,

DAVISON THORNLESS RASPBERRIES,

—ALSO—

STRAWBERRIES

Of all the choice kinds. For sale by

WARREN & CO.,
Farmer Office.

The Salem Grape.

WE entertain no doubt that the SALEM and other members of "Roger Hybrids," will succeed perfectly in California, and ship in splendid condition to the Eastern Markets.

Our stock of the SALEM, is by far the largest and best in the country and warranted genuine.

Strong plants of the SALEM, packed free, at $1,50 each, $9,00 per doz., or $35,00 per hundred.

ROGERS Nos. 4, 15, and 19, $1,00 each, $6,00 per doz and $25,00 per hundred.

MARTHA, BUMELAN, and WALTER, (new and promising varieties,) $2,00 each or $12,00 per doz.

VINES packed with great care in double boxes. Secure from frost or heat, either by Pacific Rail Road or the Isthmus route.

L. H. BABCOCK & Co.
5.33. Lockport, New York.

Miscellaneous.

OIL CAKE MEAL

THE BEST FEED KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal, and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent, Barley Meal, 13 per cent; Oat Meal, 18 per cent, Oil Cake Meal, 23 2-100 per cent. For life-sustaining properties to all stock [illegible] to sudden changes of weather or over-driving! [illegible]

For MILCH COWS particularly valuable, increasing the quantity of milk and proving its quality to a far greater extent than any food known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food; generally mixed with the mash of bran, slops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair.

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($25 per ton,) it is the cheapest feed in market. It is now selling in New York at $40 per ton, gold; at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

Gardeners, Foremen, Etc.

Those who desire to secure good and reliable Gardeners, Orchardists, Vine-pruners, and Foremen upon their Farms, can be supplied from our Office by sending notice of such wants, and giving us the special duties they desire performed, the wages they will pay, and all the particulars of board, washing, etc.

It will be our purpose to send out no person that is not fully qualified for the specific duties desired, nor any man who is not of good character, nor shall we send out any man until, by a proper test, we know he is qualified in every respect.

Having long experience in this business and knowledge of what is wanted, we shall only give employment to the *Best Men.*

For our time, examinations, correspondence, etc., we shall expect a compensation that will repay us.

Horticulture.

VINEYARDS IN GREECE.

From the French of Mr. A. Gaunay, in the "Journal de Viticulture Pratique."

The soil of Greece shows a particular fitness for grape culture. Its formation consists to a great extent of calcareous hills, on which the grapevines and the mulberry trees, without demanding any particular care from the cultivator, present him in a quite prodigious manner with their treasures.—According to a French savant, Dr. Charétés, Greece deserves a special exploration, made in the interest of grape culture.

Hellas, the continental part of the kingdom, the islands of the archipelago, but before all Morea cultivates the vine. These countries produce 1st, wine; 2d, grapes for table use; 3d, dried grapes, *i. e* currants.

1. The vines for wine production cover now one million of stremmas—The stremmas is a quadrate on a basis of 40 meters—250 stremmas are equal to one hectare,—one million of stremmas therefore like 4,000 hectares or 16,000 acres. Before the political revolution they occupied only five hundred thousand of stremmas. The annual exportation of the kingdom amounts to 85,000 of which are made in the island of Santorin, and nearly all of this goes to Russia. The wines are of poor quality and fetch in the average 16 drachmes, equal to $2,75 gold per barrel.

Judging from the low quality of the wine, a doubt may arise about the nature of the vineyards. But this is not so. Even the better grades of the wine are spoiled by the bad habit of the vignerons to pour seawater upon the must for stopping fermentation, and by the resin, which they are in use to put into the casks. The latter custom may be retraced to the ancient times of Greece, and may explain the constant appearance of the cone of the pine tree on the top of the thyrsus of Bacchus.

2. The grapes for table use have a well deserved, fine reputation. The diversity of soil and climate in Greece allows to unite in a proportionally limited space a great number of varieties.—The fruit is entirely different from that of Syria, where the usual temperature is far higher. The grapes of Greece show more similarity to the varieties of France and often participate in those peculiarities of the latter, a juicy pulp and a fine and delicate pellicle.

Of all the different provinces of Greece, Santorin is the richest in regard to the varieties of grapes. The ancient Greeks might have justly devoted to Bacchus that volcanic island, which seems to have emerged from the bottom of the ocean for the sole purpose to offer a collection of the most different kinds of grapes. All of them prosper there, and are equally adapted to be used as table grapes, as dried grapes or currants, or to the production of wine or alcohol.

3. Those grapevines, the fruit of which is usually dried and is known under the name of Currants, comprise two principal species, the "Passoline," and the "Sultanine." The other varieties are not abundant enough to offer an article for exportation nor is their production sufficient to cover the wants of home consumption. Greece has to import from Asia Minor a large quantity of the dried fruit every year.

I shall give a special description of the Passolina, the most important variety of the kingdom and finally add some remarks on the sultanina.

The grapes of Corinth, the name of which in their dried state, Currants derives from the word Corinth, is called Passoline in all Greece and Asia Minor and its cultivation is not limited to the place from which it received his name. The word Passoline is of Italian origin; it is the diminutive of *Passa*; uva passa signifies raisins, dried grapes in general, while passoline is applied to the raisins from grapes of very small berries, *i. e*, Currants.

This grape, which as green fruit has been lately introduced as a delicacy on the modern tables of France, Germany, and especially England, is a speciality of the Ionian Islands and Greece.

The trunk of the passoline vine is about 6 to 8 decimeters high. At this hight it is divided into several branches. It is a rich bearer, the bunches are numerous and crouded with berries, the latter of a spherical form and of a perfect uniformity; their skin is fine and delicate. In its fresh state the Passolina represents one of the finest table grapes, its taste is exquisite.

The most characteristic peculiarity of this variety is the small size of its berries and the total absence of stones. When bisected a distinctly marked axis is observed, forming the prolongation of the peduncle. This axis advances and spreads in a radiant shape from its upper end over the surface of the berry a peculiarity with all the grapes Corinthe.

At first sight no trace of stones is visible, but with the aid of a microscope something like it, but in an embryonic state is discovered. Very seldom berries with stones are met with. Mr. Orfanides, professor of botanic, explains the curious fact as follows:

Some years since the passoline wines have been submitted to a peculiar treatment. The operation consists in making a cut in the trunk. The descending sap meets with an obstacle by the bark, forms a condensed mass and the larger portion of it rises back again to the hight of the plant. The result of this accumulation of sap is a greater developement of the fructifying organs; the bunches produce more berries, and sometimes it has happened that the size of the latter was extended, that their embryonic stones enlarged and the Currant-grape thus accepted the type of a common grape.

This fact proves: 1. That the passoline is not a peculiar species, but that it is the product of cultivation, 2. That the small size of its berries and the absence of stones is caused by an artificial reduction of sap in the higher parts of the plant.

I was not able to find out, at what period the cultivation of the passoline may have commenced. The modern Greeks consider it to be in existance since the most ancient times. Its probable origin I will try to explain in the following:

Dr. Charétés told me that in Constantinople he became acquainted with a gardiner from Ohio, who made it his business to grow pears and apples, that had no stones, a modification which was obtained by frequently repeated grafting. A grafting was made by splitting in the month of February. In the month of June the grafted branch was cut off to its half, and this separated half branch grafted again on the remaining new grafting shoot by cutting. In the following year the same operation was recommenced by grafting always on the preceding shoot one of the same grafting. This procedure continued through the course of three years and a half, corresponds to seven successive generations and the fruit therefore undergoes a complete metamorphosis. The method to produce such changes in the nature of the fruit by repeated grafting on the same tree by its own branches has been for a long time very common in the Orient and particularly at Smyrna, where quite remarkable results shall have been obtained.

As the operation of grafting the shoots on themselves is traced back to remotest antiquity, there is all probability to believe, that the so complete modification of the fruit, as represented in the passoline, is attributable to the transformation, effected by said operation.

Quite different from the vine in general, which demands a dry soil, the passoline thrives best in the plains, and humidity is a necessity for it. It prospers well in a ground levelling the surface of the ocean, but it usually perishes at a hight of 500 feet above the ocean's level. On the gulf of Corinthe and Satras, where the sea is surrounded by the shores of Hellas and the Peloponese the vines do not grow on the tops of the mountain but come down near to the shore and their leaves often are splashed by the waves of the sea.

A long time since the fruit of Vistiaza [Aigium] is highly esteemed, but its superiority is attributable more to the most careful preparation of the Currants than to the method of grapeculture; the latter being of a uniform character in all Greece.

The most important places where the passoline grape is cultivated are Corinthe, the coast of Peloponese from Corinthe to Patras, Elis, in Purgos, Messenia, Laconia, Arcadia, Argolis, Nauplia in Argos, Trieri and its environs, Milos, Acarnania and Etolia.

A MONTHLY PAPER

SMALL FRUIT RECORDER AND COTTAGE GARDENER.

AT ONLY

50 CENTS PER YEAR.

Devoted solely to small Fruits, and Vegetable and Home's Adornment. The Editor has had a lifetime of PRACTICAL experience, and now has devoted 2 acres into SMALL FRUITS. He takes or exchanges for every agricultural and horticultural paper printed in the United States and Canada, and extracts from each, all PRACTICAL matter pertaining to the most interesting subjects, that readers of this paper get the CREAM of all these publications. A practical story entitled "EXPECTATIONS REALIZED" will begin in the January number, telling how a person first grew fruits for his family use, and then supplied his village market, and finally worked into a very extensive and profitable business; also the Editor's "*Rambles and Jottings over the Fruit-Farm.*" Besides correspondence from all parts of the United States and Canada from practical fruit growers and flower fanciers.

Splendid inducements offered to those getting up clubs, for particulars send stamp for our beautiful and attractive show bill and "Club Circular." Sample copies of Recorder sent with show bill. Address A. M. PURDY, Palmyra, N. Y.

The show bill is exceedingly beautiful and well worth examination.

VICK'S

FLORAL GUIDE FOR 1870.

The First Edition of One Hundred and Twenty Thousand Copies of VICK'S ILLUSTRATED CATALOGUE of SEEDS and FLORAL GUIDE, is published and ready to send out. It is elegantly printed on fine tinted paper, with about 200 fine wood Engravings of Flowers and Vegetables, and a beautiful COLORED PLATE—consisting of seven varieties of Phlox Drummondii, making a fine

BOUQUET OF PHLOXES.

It is the most beautiful, as well as the most instructive Floral Guide published, giving plain and thorough directions for the

CULTURE OF FLOWERS & VEGETABLES.

The Floral Guide is published for the benefit of my customers, to whom it is sent free without application but will be forwarded to all who apply by mail, or TEN CENTS, which is not half the cost. Address,

JAMES VICK,

32 20 Rochester, N. Y.

VALUABLE PLANTS FOR SALE.

☞ Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

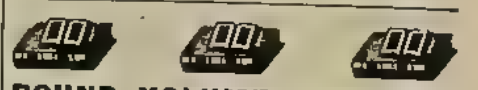
These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and to so cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, to gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us.

WARREN & CO.,

Farmer Office.



BOUND VOLUMES FARMER

☞ Volumes of the "California Farmer" for The last EIGHT YEARS, uniformly bound, can be had at the Farmer Office at $3 per Volume.

These Eight Volumes contain more useful matter touching the practical workings of Agriculture as adapted to California Culture than any Book or Books Extant, as they comprise hundreds of Experiments, Letters and Essays upon the Culture of Cotton, Rice, Coffee and Tobacco; Grapes, Strawberries, and all other Fruits, with the Culture of Hops, Castor Beans, Flax, Hemp, &c. and the Whole series of Essays of L. Prevost on Silk Culture, from early beginning.

This set of Volumes would be a Library of itself and is valuable to the Cultivator of the Soil.

Orders sent to Farmer Office will be promptly attended to

Advertising Abroad!

WE CALL THE SPECIAL ATTENTION OF ALL Manufacturers, Agricultural Men, Nurserymen, Booksellers, and others having interests connected with the PACIFIC COAST, that now is the time to secure the business of this region by wisely ADVERTISING WITH US.

The full effects of the completion of that Grandest of all HUMAN ENTERPRISES, the PACIFIC RAILROAD, must open a large and wonderfully increased business between the Eastern States and the Pacific Coast, and they who wisely ADVERTISE NOW, will be the FIRST TO SECURE IT, and when once secured, they can HOLD ON TO IT.

We therefore invite all those who have valuable IMPLEMENTS, MANUFACTURES, INVENTIONS, BOOKS, PAINTINGS, etc. to the Columns of the CALIFORNIA FARMER, that will give them a wider circulation than any other medium they can adopt.

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING MARCH, 17., 1870.

THE CALIFORNIA FARMER READING ROOM, AND MUSEUM OF NATURAL HISTORY.

320 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grain, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite

TERMS OF ADVERTISING.

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion, twenty cents a line for any larger space. Each subsequent insertion half those rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SAMPLE COPIES.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination hoping our paper will meet their approval and induce them to subscribe, and to ask their neighbors to subscribe also.

Send for Sample Papers and get up a club. Address

PUBLISHER CALIFORNIA FARMER,
San Francisco, Cal.

Editor's Chair,

[Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in each issue to our *Journal*, to which we would direct their special attention.]

"JENNY DARE AND FLOWERS."

Our kind correspondent from Pennsylvania gives us a pleasant letter in behalf of Horticultural pursuits; and we think that the celebrated florist, Vick, can now boast of as complimentary a notice of himself and his seeds, as his heart could desire. Such a compliment from a lady-cultivator should be duly recognized, as we are sure it will.

In our opinion, the least the publisher of the *Horticulturist* can do will be to make the lady an honorary subscriber.

OUR EUROPEAN CORRESPONDENT.

This letter, which was commenced last week, should be read by all interested in Agriculture.

VITICULTURE.

Vine growers and Wine-makers will find interesting matters in this week's Journal, relative to their interest.

Our Farmers will find the Gresley Letter not only valuable and instructive, but very interesting; all should read it.

We have a letter from "Nellie" to "Jenny Dare," for our next number.

LETTERS RECEIVED.

Those received during absence from the city will be answered in our next.

NEXT WEEK.

The Chinamen.

The Emegration Scheme.

The Greenbacks.

Acknowledgements

Articles Received at the California Farmer Exhibition Rooms, No 320 Clay Street.

We are indebted to Hon. C. Cole for a collection of Seeds from the Agricultural Department, for which we return our thanks.

"OVERLAND MONTHLY."

We are truly glad to hear of the great success that attends this gem of our own California literature. It is not only successful here in California, but it is now in liberal demand in the Eastern States, and called for from Europe. So great was the demand for March, that every copy was sold, and a much larger edition could have found ready purchasers. The edition for April has required a large increase of numbers. The "Overland Monthly" is a grand success, and a credit and honor to our State.

NEW MUSIC.

Prof. Gustave Scott has set to music Moore's chant of the "Evening Bells." We need not praise the Professor's music; whoever hears that song will remember the sweet melody, and hear the "Chimes of Bells" often in his dreams; it is *very* beautiful, and reflects great credit upon Prof. Scott. The music is for sale by M. Gray, music dealer, Clay Street.

COMMISSIONER DELANO, in reply to a House Resolution, expresses himself in favor of the abolition of the system of moieties, etc., to informers; but he thinks Congress should appropriate, say $25,000 annually for use by the Commission, under approval of the Secretary of the Treasury, in bringing violators of the revenue laws to justice.

RARE FLOWER SEEDS.

We have several fine collections of new and choice Flower Seeds from the well known Florists, "Dreer" of Philadelphia, and James Vick of Rochester N. Y. Those who wish "Gems in Flora," will find them at our Office, No. 320 Clay Street.

THE SEASONS.

Reader, would you realize the real beauty of Spring-time? then break away from the turmoil of business in the city; fly from its wearying drudgery and care, and go into the country and breathe its pure air, and hear the "birdie's" sing; go and see the flower crowned prairies, and inhale the perfumed breath that comes from these bright and beautiful *parterres* that are so thickly scattered over the broad plains, and which so beautifully deck the hillsides on every hand.

The earth never looked more lovely, nor was the air ever sweeter; it comes to you with its sweetness as if it was wafted from "Araby the blest." Now is the time to inhale the electric life of the Season; now, before the scorching rays of a Summer's sun has seared the foliage of earth's beautiful gems. Now is the time to realize the value of pure air and beautiful scenery, and a week or two in the country will save double the cost of such a pleasure-trip by securing a year's better health and the cost of a heavy doctor's bill. So, reader, take our advice, and step into the Western Railroad cars, and thence over the Central. Take any of the routes of these roads and you will find beauty everywhere.

While speaking of the Seasons,—the rich and promising prospect now before the harvesters, it would be quite amusing to go back and read the various Editorials of the most of the Journals of our State, for the last three months.

From grave to gay,—
From mournful and severe,
They all have strangely *criticised*
The Seasons of the year.

They said the earth, for want of rain,
Would never yield a crop of grain,
And scattered miles and miles around,
Famished and dying cattle were found;
But, now the blessed rains have come,
And given to life a busy hum—
The Press has changed its *croaking* lays,
And all now shout the Season's praise;
The Press now cry in happiest mood—
No Season ever half so good!

We have never doubted the present Season.—We fully believed we should have all the rain we needed. Our judgment was derived from Nature, not *guesswork*. From the early days of Autumn we have always said rain! rain! when others croaked; but rain has come, and the earth and her children rejoices.

It is not necessary for us to say it will be a prosperous season, for, from all sections of the State—East, West, North and South, we have letters from our correspondents and from the Press, of the grand prospects of the Farmers, and if the *Farmers* prosper, the State prospers.

The Wheat crop, and in fact all the cereals, promise well. The late frost has nipped the blossoms upon our fruit-trees, but that will prove a blessing in disguise, for the blossoms that are left will produce all the fruit the trees should bear.

The frost has also nipped the potatoes, but not killed them; they will come again. It has also touched early-started grapes, etc., but without serious injury. Take it all in all, it is a most Glorious Season!

PLANTATION OF THE EUCALYPTUS.

(*Australian Gum Tree.*)

A writer in the *Mining Press*, in sketching the Castro Valley, in Alameda County, speaks of a large Plantation of the *Eucalyptus*, or Gum Tree, and describes it as a tree but little known in California.

The Eucalyptus has been grown in this State for some twelve or fifteen years, and there are many very large trees of this species all over this State. If the writer will call at the garden, corner of Mason and Pacific St., in this city, he can see one that was planted over ten years ago, that is Diameter, and we can direct him to hundreds of others.

There are however over forty varieties of this tree many of them fragrant in foliage and also in the wood. One of the good qualities of the Eucalyptus is, their delicate foliage, many of the varieties being long lanced leaved foliage, and evergreen also, making a handsome ornamental tree, and not injured by the wind. Especially those kinds that are pendant in their habit.

The *Mining Press* says:

A piece of ground, consisting of fifty acres, is planted with the Eucalyptus, in rows eight feet apart each way, making a forest grove of 39,000 trees, set this season with one-year-old seedlings of the blue gum and iron bark, the most vigorous and tall-growing varieties of the Eucalyptus.—This tree is a native of Australia, and is as yet little known in California. The largest of these trees which I have seen are but five years old, erect, straight, vigorous growth, and fifty feet high. They are elegant ornamental trees, somewhat resembling the Laurel, but more majestic and massive in figure and foliage. They are hardy throughout the lower hill and valley country of California, and are the most popular street, shade and ornamental trees now attracting attention here. They appear to be very healthy trees, and their peculiar flavor and fragrance being disagreeable to animals, keeps them from being eaten or gnawed. Hence the gum tree can safely be set where other sorts of trees would be destroyed.—The past Winter has been severely frosty, but not one of the tender little trees in this grove have been killed. Although some persons regard this as a rash experiment, I have every reason to believe that it will prove a magnificent success. I have not seen the proprietor, but I fully appreciate the enterprise. The wood of the Eucalyptus tree is hard, and the timber is said to be very useful for many purposes.

REWARD OFFERED.

The Central Pacific Railroad Company has a reward of $5,000 for information that will lead to the arrest and conviction of the parties that set fire to the American River Bridge. If the informant was one of the parties, he will not only receive the reward, but remain unprosecuted.

SPECULATORS FOLLY.

GRAIN ELEVATOR AT VALLEJO.

Many months since on a trip over the California Pacific Rail Road, up to Sacramento, while seated in the cars, and passing from Vallejo on the route a friend near us pointing to a lofty but uncouth building, asked us what it was, who could erect such a building and what was its purpose?

Knowing the building, and having no faith in the enterprise for which the building was designed we promptly answered, pointing to the building. That is "Speculators Folly," and briefly discussing the purpose for which The great? Elevator was reared we said, never will a ship load in bulk from that building.

We learned shortly afterward that we gave almost mortal offence to one of the Stockholders, who call on us personally and tried to change our opinion of its great value.

We notice a statement in the *Alta*, of a Vessel that had loaded at Vallejo in Bulk. This is a mistake, for if we are rightly informed no Vessel ever has been loaded there in bulk and never will if the owner and shipper desires a prosperous voyage and shipment.

It was quite amusing to us to note a little time after we spoke of "Speculators Folly," that the stock held by the party who was offended at our remarks was advertised for assessments, even while he was telling of the great value, and advocating the Elevator to the farmers interests

We have repeatedly shown that it was easier, cheaper, and better for the Farmers to send their grain in sacks than in bulk, and so it will be found.

In the last *Commercial Herald and Market Review*, of our city, we find the following article, and as it expresses the views we have often reiterated, we give it to our readers.

"Much ado continues to be made in the Vallejo and other interior papers respecting the so called advantages to be derived from the shipment of Wheat and other cereals in bulk, the same to be passed through Elevators. The facts are, that the business of Grain shipments in bulk was tried on the Atlantic many years ago, between New York and Great Britain, and abandoned as impracticable. For the last twenty-five years or more, Grain exports from Atlantic ports have been made, for the most part, in what are called "ships' bags:" that is, the ships freighting the Grain furnish the bags for the voyage over, when they are emptied and kept in reserve for many subsequent shipments. One reason for the constant agitation of this subject on this coast is to bring into use a Grain Elevator erected at great expense, and which, has been of no earthly utility owing to various causes incident to the peculiar way of handling and transporting Grain in a new country like ours, where bags are indispensable in the marketing of the grain, both by land and water conveyance, particularly where the low stage of water prevails, and flat bottom boats or those of very light draught are alone practicable, on most of the water courses of the State. Besides there is no way yet invented for California grain-carrying so cheap as the use of Burlap bags, costing, as they did last year, 10@12½c ₱ cental.—Some of our people are chronic in their complaints—always growling and grumbling at the universal custom of using English made grain sacks, quite forgetting that John Bull is our largest cash customer for breadstuff, and that it is no more than a fair reciprocity trade for him to furnish the containers in which to carry home the staff of life to consumers. It does seem to us foolish for people, of common ordinary intelligence, to keep constantly harping upon this one string which for more than a score of years, has been pronounced by ship masters and underwriters as entirely impracticable. Elevators have their uses at Buffalo, Chicago, and other cities, where canal boats and vessels of large carrying capacity upon inland waters make short trips or voyages occupying but a few days or hours, where also Lumber is plenty and cheap for making strong bins in ship or vessel to hold the grain—all of these are impracticable upon this coast, and cannot be made available upon voyages lasting four to six months upon the high seas, where there is danger that the pumps become choked, and besides the grain is more liable to become heated when in bulk and the cargo to "shift" by stress of weather."

We publish the above that our Farmers may see that a popular Commercial paper takes the same view of the Elevator that we took months since. Another important fact is, the Cotton Mills at Brooklyn, will soon furnish Bags to our Farmers at greatly reduced rates, and thus settle the question of shipping Grain.

OUR EXCHANGES

By the notice we gave some time since that we could not enlarge our *list of Exchanges*, except to Journals of same interest, or those of value, we hereby give notice that those Journals that do not receive the FARMER after our *present number*, will please understand that however much we may regret to refuse the Exchange, it arises from our *utter inability to do so*, for our applications for Exchange has reached the number of nearly *One Thousand*. This will show our cause of refusal.

Those Journals that receive this notice mark, will know we must decline a further Exchange with them, although we regret that we cannot continue.

POTATOE PLANTING.

Now that the late frosts have gone, there never was a better time to plant Potatoes, let the soil be plowed deep and fine, and a sure crop awaits the planter.

The "Early Rose," planted in January have already been matured, we have seen good size "Early Rose," that was planted as late as Jan. 12th, and there can be no doubt but that the "Early Rose" planted now, will make two crops the present season—and two good crops—there is no Potatoe grown so sure as the "Early Rose."

THE PREVOST FUND.

The Committee of the Prevost Fund would respectfully invite all the friends of the late Louis Prevost—the PIONEER OF SERICICULTURE—to forward to them such contributions as they are disposed to make to this Fund; and it is to be hoped that those Journals over this coast that have always spoken so kindly of this most-worthy Pioneer, will present this matter to their readers, and thus enable the Committee to carry out the plans designed for the Widow, and erect a suitable Testimonial to the Memory of Louis Prevost.

Contributions can be sent to the Treasurer—Judge D. S. Payne, San Jose; Hentsch and Berton, Bankers, San Francisco; CALIFORNIA FARMER Office, San Francisco.

At an early day the contributors will be invited to meet and arrange the disposition of the Funds that shall be raised.

OBSEQUIES OF THE LATE WESLEY HARPER.

We copy from the *Bazar* the following deeply-interesting sketch of the obsequies of the late Wesley Harper, of the well known house of Harper Brothers, of New York.

The name of Harper, as connected with the Literature of our country, will always be cherished and honored among the great and good of our land. No Publishers have ever won a more honorable name and fame in this or any other country.

The recent obsequies are no evidence of the noble character of the deceased, in the arrangement of his own burial; and his regard for those men long in his employ, whose many years of service—of which there is no parallel case in the world—will excite a deeper interest and a deeper respect for this noble-hearted man that has left us, and whose memory will ever be cherished:

"At the funeral of Mr. Wesley Harper, on the 17th ult., one little incident was noticeable and noteworthy, revealing, as much perhaps as any unimportant incident could reveal, the unaffected modesty of character of the deceased, and the sincere regard he felt for those who had been long and faithfully connected with the house. Instead of selecting from among the many prominent and good men who would have deemed it an honor to have been his pall-bearers, he himself selected, in part, for that duty, four of the oldest trustees of the church of which he was a member, and four of the oldest employés of the house—the latter gentlemen being Mr. William H. Demarest, who has been employed there both in the composing-room and office for thirty-seven years; Mr. Henry Marsh, foreman of the composing-room, who has been employed in the establishment forty-eight years; Mr. David W. Lewis, foreman of the press-room; and Mr. Thomas Farrington, foreman of the paper and ware-room. The latter had been in the employ of the Messrs. Harper for fifty years, and was one of their earliest apprentices. Probably there could not be found in any printing or publishing establishment in this, or in the old country, four employés who had been so long continuously in one house as these four estimable gentlemen; and it is doubtful if, in any other branch of industry in the United States, the same spectacle could have been witnessed. There was another circumstance connected with the family of the Harpers and the church in which these services were held, that perhaps did not occur to either of the clergymen who officiated on the occasion—namely, that the remains of the grandfather of Mr. Wesley Harper were interred, and were at that moment lying underneath the chancel of the church, and directly under the spot where Mr. Wesley Harper's body was then resting. Five generations of the family had worshipped in that church."

THE BOYS

The increasing roughness and vulgarity manifested by our town boys are beginning to assume such boldness as to become a subject of serious comment. Parents who allow their boys to go at will about the town, at all hours of the day and night, have but little idea of the habits and associations their children are forming, and seem to live in blissful ignorance of the fact that there are many boys always on the streets whose presence is contaminating to the purity and innocence of a child of tender years. It is no uncommon thing to see groups of boys on the streets and in the public squares, apparently engaged in innocent sport and playful diversion; but those who have given close attention to the boys, and have heard the vile language common among them, will certainly bear us out in the statement that it is shocking indeed. This is not intended to apply to all the boys, many of whom have not yet reached that depth of degradation. Again, the use of tobacco among boys is on the increase, though some of them seem to use considerable precaution, hiding themselves in door-ways, by-ways and vacant lots. Yesterday, early in the morning, about half-a-dozen were seen in a door-way on First Street, engaged in conversation, smoking and chewing. Two had stumps of old cigars that some older smokers had thrown away. Two others had short-stem clay pipes, and one had a cigarette, while another was chewing and spitting in a fearful manner, manifesting the plainest signs of extreme nausea. It was a sickening sight. One of them proposed a plan by which they might (as he said) "spar the drinks." None of the boys were over fourteen years of age. What do parents think of this? Are they willing that their boys should come in contact with such influences as these?—[*San Jose Mercury*.

The above is but a picture that can be seen in our city in many places, day and night, even up to midnight—a burning disgrace, both to parents and our authorities.

If these boys are to have an influence in the future of our State, then God save the commonwealth of California!

A CRIME PREVENTED BY A PRESENTIMENT.

The following occurrence, reported by the Detroit *Free Press*, has no little interest for those fond of examining into the strange phenomena of mental life. It, as will be seen at once, belongs to that class of subjects which have been considerably discussed in these pages.

"On Tuesday evening last, Bernard Rolfe, a German farmer, residing about nine miles from this city, on the Pontiac road, had business with a hardware firm on Woodward Avenue. He had a German laborer in his employ named Henry Artles, and him Mr. Rolfe left at home busy with the team, and procured a passage in with a neighbor. It was about five o'clock in the afternoon when Rolfe left his home, and as it was understood that the neighbor would not return before the next day, the family, consisting of wife and three small boys, knew that they would be alone with the hired man for the night. Artles was a comparative stranger to them all, having been at work for two weeks only. He was a quiet man, and spent his leisure hours by himself, never indulging in conversation when not directly appealed to. Still, neither Rolfe nor his wife found fault, or ever had occasion to suspect that the laborer was other than what he seemed.

"On his arrival in the city, Mr. Rolfe partially concluded his business with the merchants, and engaged lodgings at a hotel in Larned Street.—About nine o'clock in the evening, while seated in the office smoking, Mr. Rolfe says he began to tremble and feel nervous shocks, which so increased that in a short time he could scarcely hold his pipe between his teeth. He walked several times across the room, went into the open air, but the feeling did not pass away. His thoughts kept recurring to the laborer at home, and he called to mind the features of Artles, and the fact that he had several times caught him peering about the room, where a bureau was standing that contained money to go toward putting an addition to the house. At ten o'clock Rolfe decided to go home. He was laughed at by his neighbor, who told him that the feeling was the first symptoms of chill fever; and that Rolfe would go home next day and find that everything had passed off peacefully. Rolfe hesitated for some time, but at last started for home on foot, promising to return in the morning on horseback, in time to secure the balance of his things before the neighbor should be wanting to return home.

"He reached home about midnight, awakened his wife, and to her expressions of astonishment could say nothing, only that he felt that he ought to return. Inquiring as to Artles, the wife replied that he had performed the farm 'chores' as usual, remained about the house for a while, and then informed her that the night being warm he would sleep in the barn. Rolfe passed through to the kitchen, where he found a window up that looked directly upon the barnyard. His wife was certain that she had shut all the windows on retiring.—As they stood for a moment looking out, they saw the barn door swing open, and Artles led out one of the horses. As they watched, he led the horse through the gate, and, going to the front, they saw that he had tied the animal to the yard-door gate. Rolfe immediately opened the door and walked down to the gate. He was within ten feet of Artles when the latter espied him, and, giving utterance to an oath of angry astonishment, immediately fled down the road. Rolfe pursued him for some forty or fifty rods, and then gave up the chase. On returning to the horseblock, the gleam of steel caught his eye, and he picked up from it an ugly-looking sheath knife. The open window, the pretense of sleeping in the barn, the horse and knife, all went to prove that Artles intended to rob the house, even if he had to make use of the knife. The facts are given exactly as narrated by Mr. Rolfe himself, and the reader is free to judge of the truth or absurdity of the presentiment. On Friday, Artles had not returned to the neighborhood, neither had the slightest clew to his whereabouts been discovered."—*Phrenological Journal*.

HOW TO GET A SITUATION

[Here is a valuable chapter for the many young men who are looking for situations. Many such situations, few only are worth.—ED. F.]

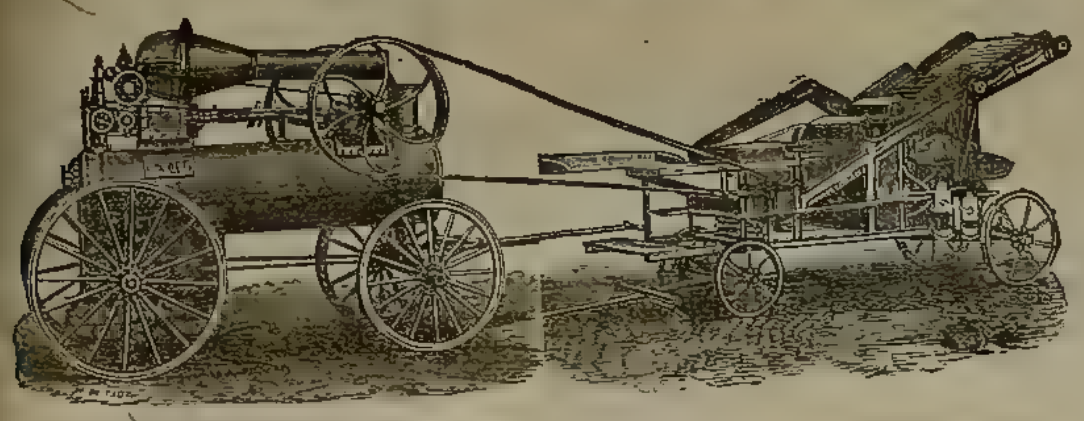
The best recommendation one can bring to an employer is some practical evidence that you are interested in his business or pursuit. If he be a merchant, you may bring him customers; if a publisher, you can extend the sales of his publications; if a manufacturer, tailor, or shoemaker, you can direct attention to his establishment. If he be the publisher of a newspaper or magazine, let him see that you are interested in its circulation. This, in itself, would be a recommendation far better than any letters you can bring. If a young man should apply to this office for a situation in the phrenological establishment, the first question would be, "How much are you interested in the subject?" If he replies that he has read our books, formed clubs for the *Journal*, and would like to assist in making the subject known all over the world, without reference to immediate personal profit, *that* would be the man for us.

There are many ways in which a young man may make his application for a situation; but none so effectual, or so likely to secure an entrance, as by these *practical* evidences.

Employers do not regard the smell of whisky and tobacco a recommendation to a young man. Nor will a flashy dress, cheap jewelry, or comically-cut hair and whiskers serve as a passport to favor. He must bring the evidences of industry, order, temperance, enterprise, activity, good-nature, politeness, integrity, and respect with him, if he hopes to get a *good* situation.—*Phrenological Journal*.

A New Hampshire man claims to have built 12,000 rods of stone wall, and to have stoned 150 cellars and 50 wells, besides doing a lot of light work, such as laying bridge abutments and blasting and splitting stone.

"HOADLEY" "RUSSELL!"



HOADLEY'S IMPROVED THRESHING ENGINES!!

RUSSELL'S IMPROVED SEPARATORS!!

CONSTITUTING PERFECTION IN THRESHING GRAIN!!!

THESE MACHINES are now so completely constructed as to render them the very "NE PLUS ULTRA" of ENGINES and SEPARATORS for the Farming community of California.

THE ATTENTION of the FARMING community and the public generally is called to the GREAT IMPROVEMENTS on the above make of Engines and Separators, which are surpassed by none for threshing grain, and are specially adapted to the use of Farmers.

Improvements on Russell's Separator.

THE SEPARATOR has been increased six inches in width, the sieves being much enlarged, to correspond; the 33 inch Cylinder now having a 40 inch Sieve, being six inches larger than the old style; and the 36 inch Cylinder Sieve has been increased six inches, and is now 48 inches, which greatly enhances the capacity of the Machines.

HAINES' HEADERS

With Doane's Adjustable Reel.

IN OFFERING these SUPERIOR HEADERS to the Farming Community of California, we can safely say that we have now brought the HEADING MACHINE to as near perfection as is possible.

THE MOST USEFUL MPROVEMENT YET MADE!

WHICH is a simple arrangement for Raising and Lowering the Reel some 18 inches, so as to enable the REEL to reach lodged grain, different lengths of stalks, and to be used in windy weather without stopping the Machine, and the consequent loss of time and labor in adjusting the old style Stationary Reel, which took some FIFTEEN MINUTES. The bolts are always of the right length, and you can adjust the Reel to any grain with the greatest ease,

AND WITHOUT LOSING A MINUTE'S TIME!

THE GREAT point in our New Headers will commend itself to all purchasers, and no other Headers will be used when the great merits of this improvement are known.

CAUTION.

ALL PERSONS are Cautioned not to infringe upon our Patent Adjustable Reel Headers, as they will be prosecuted.

FOR SALE BY OWNER OF PATENT AND MANUFACTURER.

EARLY ROSE POTATOES.

A Splendid lot of these,

Best of all Early Potatoes,

And raised here in California can be had at the

New York Prices.

We invite all Potatoe growers to call and see them at our office, where we can show them a sufficient number of testimonials as to their Quality and Productiveness to convince all that the EARLY ROSE is the very

BEST EARLY POTATOE KNOWN.

One of the grand features of this wonderful Potatoe is that it succeeds most admirably in high, dry lands—Some grand results we have here in reports now to be published

Those who want Pure Seed of California growth, and at New York rates or what it would cost to bring them here, can have larger, fairer and fresher Seed than any that can be imported.

FIGS OF THISTLES.

Small is my garden-plot,
And sparse my sowing;
I labor while the sun is fierce and high;
Yet in the evening, at my humble cot,
When haughty folk go by,
Under the modest eaves, secluded, shy,
My prodigal blossoms are blowing.

Once, in a sombre hour,
There stood a barren,
Leafless, and hueless, and unfruitful tree;
Yet, later, came a pure and perfect flower—
A blossom fair to see;
And after followed, in great jubilee,
The numberless roses of Sharon.

Wherest I wondered much,
And with good reason,
Why did my labor yield me this increase,
Unless the Lord had touched, with marvelous touch,
The land, and given new lease?
Lo! where I looked alone for sad surcease,
I harvest my fruits out of season.

Grapes grew not upon thorns,
Say wise epistles;
Some miracle must quicken this dull sod,
That, meagre in its own self, yet adorns—
Blessed be mighty God!—
My pathway as I wander, roughly shod,
And gather my figs of the thistles.

[*Overland Monthly*, for April.

CHILDREN'S ARMS AND LEGS, ETC. ETC.

BY W. M. CORNELL, M. D., LL. D.

Nude arms are the means of the premature deaths of many of the little innocents. We often see these little mites, the darlings of their parents, with thick, substantial clothing about the body, mufflers around the throat, and caps on their heads, with their arms bare to the elbows, and their legs in a similar condition nearly up to their knees. These extremities of a child, in which the blood is never of so high a temperature as it is in the adult, and in which it is of the greatest importance that it should be kept in a circulating medium, ought to be warmly clad. Every parent, and especially every mother, should see that clothing of a child comes down to the wrists upon the arms, and to the feet upon the legs. It may be fashionable, it may be gratifying to the mother's pride, to see the clear skin of their children; but it is often death to the children. Every practising physician could tell a tale upon this subject that should make the ears of all such indiscreet parents to tingle. A distinguished English physician, who had practised forty years, stated that he believed he had known several thousands of children brought to an untimely grave by going with their arms and legs naked; and a distinguished physician who died some years since in Paris, declared, "I believe that during the twenty-six years I have practised my profession in this city, twenty thousand children have been carried to the cemeteries a sacrifice to the absurd custom of exposing the arms naked." As lovers of children, we warn parents against adopting such a deleterious custom.

Many have wondered why so many children die. We wonder that any live. Soon after birth they are crammed with food, dosed with medicine, and steamed with bed-clothes and stoves; then they are sent out in cold weather, clothed warmly upon all parts of the body, except where the clothing is the most needed. The legs, arms, and necks are bare, and thus are they exposed to a temperature that makes a strong man shudder, though gloved, overcoated, stockinged and booted.

But we want to harden the children; yes, and soon you find they are gone.

Put the bulb of a thermometer in a baby's mouth, and the mercury will rise to 90°. Now carry the same to its little hand; if the arms be bare, and the evening cool, the mercury will sink to 40°. Of course all the blood which flows through those arms must fall to within 30° to 40° below the temperature of the heart. Need we say when these currents of blood flow back into the chest, the child's vitality must be more or less compromised? And need we add that we ought not to be surprised at its frequent recurring affections of the tongue, throat, or stomach? Many children, with habitual cough and hoarseness, or choking with mucus, have been entirely or permanently relieved by simply keeping their arms and hands warm. Every observing and progressing physician has daily opportunity to witness the same cure.

A BED OF ROSES.

To Lie on a Bed of Roses is the botanical idea of supreme luxurious happiness. Try it. Go to some eminent florist's and lie on any one of his beds of roses. See how he will like the theory reduced to practice.

Or, take a nap for two hours in the evening on a bed of your own roses. There'll be the very *devil* to pay, and rheumatism will be your portion.

A CLOCK IS LIKE A MAN.

It has two hands, a face, an inside, and outside. Sometimes the hands point to the truth—but it is not ashamed to show its face when they don't!—It is a useful bit of machinery—so is man! It often gets out of order—so does man! It is often wound up—so is man! It strikes—so does man! It is not always to be relied on—no more is man!

A CROSS HUSBAND.

HOW HE WAS CURED.

I saw a model husband in a dream,
Where things are not exactly what they seem,
A moral man, to skeptics be it known:
The wife he loved and cherished was—his own;
And for the test—I saw the husband wait,
With horse and chaise, five minutes at the gate,
While Jane put on her things; nor spoke one sour
Or bitter word, though waiting half an hour
For dinner; and like Patience on a throne,
He didn't swear to find a button gone.

This human-nature story well illustrates perverted temper, and shows how in one case it was subdued without recourse to corporeal punishment, divorce, or suicide.

"Bedlam let loose! Pandemonium in rebellion! Chaos turned inside out! What is the reason a man cannot be allowed to sleep in the morning without this everlasting racket raised about his ears? Children crying—doors slamming—I will know the reason of all this uproar."

Mr. Luke Darcy shut the door of his bedroom with considerable emphasis, and went straight to the breakfast parlor.

All was bright and quiet and pleasant. Bedlam wasn't located just there, and Mr. Darcy went stormingly up stairs to the nursery.

Ah! the field of battle was reached at last. Mrs. Darcy sat in her low chair trying to quiet the screams of an eight-month-old baby-scion of the house of Darcy, while a rosy boy of five years lay on his back, kicking and crying in an ungovernable fit of childish passion.

"Mrs. Darcy!" enunciated Luke, with a loud and ominous precision, "may I inquire what all this means? Do you know that breakfast is waiting?"

"I know, Luke—I know," said poor perplexed Mrs. Darcy, striving vainly to lift the rebellious urchin up by one arm. "Come, Freddy, get up and be washed."

"No-o-o!" roared Master Freddy, performing a brisk tattoo on the carpet with his heels, and clawing the air at a furious rate.

Like an avenging vulture Mr. Darcy pounced on his son and heir, carried him to the closet and turned the key upon his screams.

"Now, sir, you can cry it out at your leisure.—Evelyn, the nurse is waiting for the baby. We'll go down to breakfast."

"But, Luke," hesitated Mrs. Darcy, "you won't leave Freddy there!"

"It's temper that is at the bottom of these demonstrations, and I'll conquer that temper or know the reason why. It ought to have been checked long ago, but you are so ridiculously indulgent."

"But if he'll say he's sorry, Luke?"

Mr. Darcy tapped sharply at the panels of the door.

"Are you sorry for your naughtiness, young man?"

A fresh outburst of screams and a renewal of the tattoo was the answer.

"I am sure he is sorry, Luke," pleaded his mother, but Mr. Darcy shook his head.

"Entire submission is the only thing I will listen to," he said, shortly.

Evelyn, with a dewy moisture shadowing her eyelashes, and a dull ache at the heart, followed her liege lord down to the breakfast-table.

A tall, blue-eyed young lady, with bright chestnut hair, and cheeks like rose-velvet, was at the table, by name Clara Pruyn, by lineage Mrs. Darcy's sister. She opened her blue eyes rather wide as the two entered.

"Good gracious, Evy, what's the matter?"

"Nothing," answered Luke, tartly.

"Something is the matter, though," said Clara, shrewdly. "What is it, Evelyn? Has Luke had one of his tantrums?"

Luke sat down his coffee-cup with a sharp click

"You have very peculiar expressions, Miss Pruyn."

"Very true ones," said Clara, saucily.

"It's only Freddy, who feels a little cross, and—"

"A little cross!" interrupted the indignant husband. "I tell you, Evelyn, it's quite time it was checked. Oh, that parrot! what an intolerable screeching he keeps up! Mary, take that bird into the kitchen, or I shall be tempted to wring its neck. What does all these eggs, Evelyn?"

Mr. Darcy gave his egg, shell and all, a vindictive throw into the grate.

"And the plates are as cold as a stone, when I've implored again and again that they might be warmed. Well, I shall eat no breakfast this morning."

"Whom will you punish most?" demanded Miss Clara.

Luke pushed his chair back with a vengeance, and took up his stand with his back to the fire.

"Please sir," said the servant, deprecatingly advancing, "the gas bill—the man says would you settle it while—"

"No!" roared Luke, tempestuously. "Tell the man to go about his business, I have no small change this morning."

Mary retreated precipitately; Clara raised her long, brown eyelashes.

"Do you know, Luke," she said, demurely, "I think you would feel better if you would do just as Freddy does—lie flat down on the floor and kick your heels against the carpet for a while."

Luke gave his mischievous sister-in-law a glance that ought certainly to have annihilated her, and walked out of the room, closing the door behind him with a bang that would bear no false interpretation. Then Clara came round to her sister, and buried her pink face in Evelyn's neck.

"Don't scold me, Evy, please, I know I have been naughty to tease Luke so."

"You have spoken nothing but the truth," said Evelyn, quickly. "Clara, sometimes I wonder how I can endure the daily cross of my husband's temper."

"Temper!" said Clara, with a toss of her chestnut brown hair. "And the poor dear fellow hasn't the least idea how disagreeable he makes himself."

"Only this morning," said Evelyn, "he punished Freddy with unrelenting severity for a fit of ill-humor which he himself has duplicated within the last half hour."

"Evelyn," said Clara, gravely, "do you suppose he is beyond the power of cure?"

"I hope not; but what can I do? Shut him up, as he shut up little Freddy?"

Evelyn's merry, irresistable laugh, was checked by the arch, peculiar expression in Clara's blue eyes.

"The remedy needs to be something short and sharp," said Clara, "and the dark-closet system combines both requisites."

"Nonsense!" laughed Mrs. Darcy, rising from the breakfast-table, in obedience to her husband's peremptory summons from above stairs.

Luke was standing in front of his bureau-drawer, flinging shirts, collars, cravats and stockings, recklessly upon the bedroom floor.

"I'd like to know where my silk handkerchiefs are, Mrs. Darcy," he fumed. "Such a state as my bureau is in is enough to drive a man crazy!"

"It's enough to drive a woman crazy, I think," said Evelyn, hopelessly, stooping to pick up a few of the scattered articles. "You were at the bureau last, Luke. It is your own fault!"

"My fault—of course it's my fault!" snarled Luke, giving Mrs. Darcy's poodle a kick that sent it howling to its mistress. "Anything but a woman's retorting and recriminating tongue. Mrs. Darcy, I won't endure it any longer!"

"Neither will I!" said Evelyn, resolutely advancing, as her husband plunged into the closet for his business coat, and promptly shutting and locking the door. "I think I have endured it quite long enough—and here is an end of it!"

"Mrs. Darcy, open the door!" said Luke, scarcely able to credit the evidence of his own senses.

"I shall do no such thing," said Mrs. Darcy, composedly, beginning to re-arrange shirts, stockings, and flannel wrappers in their appropriate receptacles.

"Mrs. Darcy," roared Luke, at a fever heat of impotent rage, "what on earth do you mean?"

"I mean to keep you in that clothes-press, Mr. Darcy, until you have made up your mind to come out in a more amiable frame of mind."

There was a dead silence of fully sixty seconds in the closet, then a sudden outburst of vocal wrath.

"Mrs. Darcy, open the door this instant, madam!"

But Evelyn went on humming a saucy little air and arranging her clothes.

"Do you hear me?"

"Yes, I hear you."

"Will you obey me?"

"Not until you have solemnly promised me to put some sort of control on that temper of yours,—not until you pledge yourself hereafter to treat your wife as a lady should be treated; not as a menial."

"I won't."

"No? Then in that case I hope you don't find the atmosphere at all oppressive there."

Another sixty seconds of dead silence, then a sudden rain of heels and hands against the wooden panels.

"Let me out, I say, Mrs. Darcy! Madam, how dare you perpetrate this monstrous piece of audacity?"

"My dear Luke, how strongly you do remind me of Freddy. You see there is nothing I have so little tolerance for as a bad temper. It ought to have been 'checked long ago,' only you know I'm so 'ridiculously indulgent.'"

Mr. Darcy winced a little at the familiar sound of his own words.

Tap, tap, tap! came softly on the door. Mrs Darcy composedly opened it and saw her husband's little office boy.

"Please, ma'am, there's some gentleman at the office in a great hurry to see Mr. Darcy. It's about the Applegate will case."

Mrs. Darcy hesitated an instant; there was a triumphant rustle in the closet, and her determination was taken.

"Tell the gentleman that your master has a bad headache, and won't be down town this morning."

Luke gnashed his teeth audibly, as soon as the closing of the door admonished him that he might do so with safety.

"Mrs. Darcy, do you presume to interfere with the transaction of business that is vitally important, ma'am?"

Mrs. Darcy nonchalantly took up the little opera air where she had left it, letting the soft flowing words ripple musically off her tongue.

"Evelyn, dear."

"What is it, Luke?" she asked, mildly.

"Please let me out. My dear, this may be a joke to you, but—"

"I assure you, Luke, it's nothing of the kind; it is the soberest of serious matters to me. It is a question as to whether my future life shall be miserable or happy."

There was a third brief interval of silence.

"Evelyn," said Luke, presently, in a subdued voice, "will you open this door?"

"On one condition only."

"And what is that?"

"Ah! ah!" thought the little lieutenant-general, "he's beginning to entertain terms of capitulation, is he? On condition," she added, aloud, "that you will break yourself of the habit of speaking sharply and crossly to me, and on all occasions keep your temper."

"My temper, indeed," sputtered Luke.

"Just your temper," returned his wife, sternly.

"Will you promise?"

"Never, madam."

Mrs. Darcy took up a pair of hose that required mending, and prepared to leave the apartment.—As the door creaked on its hinges, however, a voice came shrilly through the opposite keyhole.

"Mrs. Darcy—Evelyn—wife!"

"Yes."

"You are not going down stairs to leave me in this place?"

"I am."

"Well, look here—I promise."

"All and everything I require?"

"Yes, all and everything you require—confound it all!"

Wisely deaf to the muttered sequel, Mrs. Darcy opened the door, and Luke walked out, looking right over the top of her shining brown hair.

Suddenly a little detaining hand was laid on his coat-sleeve.

"Luke, dear!"

"Well?"

"Won't you give me a kiss?"

And Mrs. Darcy burst out crying on her husband's shoulder.

"Well," ejaculated the puzzled Luke, "if you aren't the greatest enigma going. A kiss? Yes, a half-a-dozen of 'em if you want, you kind-hearted little turnkey. Do not cry, pet, I'm not angry with you, although I suppose I ought to be."

"And may I let Freddy out?"

"Yes, on the same terms that papa was released. Evelyn, was I very intolerable?"

"If you hadn't been I never should have ventured on such a violent remedy."

"Did I make you very unhappy?"

"Very."

And the gush of warm sparkling tears supplied a dictionary full of words.

Luke Darcy buttoned up his overcoat, put on his hat, shouldered his umbrella, and went to the Applegate will case, musing as he went upon the new state of affairs that had presented itself for his consideration.

"By Jove!" he ejaculated, "that little wife of mine is a bold woman, and a plucky one."

And thus he burst out laughing on the steps.

It is more than probable that he left his stock of bad temper in the law buildings that day, for Evelyn and Clara never saw any more of it, and Freddy is daily getting the best of the peppery element in his infantile disposition.

NEW

AGRICULTURAL BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS in those parts needing such illustration, so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

THE FIELD AND GARDEN VEGETABLES OF AMERICA By Fearing Burr. Containing descriptions of all Vegetables, their different species and varieties grown in this country, with full illustrations of them.....Price $5 00

Miscellany.

PERUVIAN-BARK TREES.

A gentleman of this City received, last Autumn, three small papers of cinchona seed from Com. Maury, President of the Virginia Mechanics' Institute, Lexington. They are labeled "Condameina," "Micrantia," and "Succimbos." The latter is referred in India. There is no question of the adaptation of our foot-hills to the growth of this valuable tree. The difficulty is to find agriculturists to go into anything but wheat and fruits, both of which are so uncertain as to profits. One fine company is going into beet-sugar, one has been two years making sorghum sugar, a thousand persons have gone into mulberry trees as a speculation, and two only have begun to make silk. We know of only two parties that have set out mulberry trees in plantation, viz.: at Davisville and Santa Barbara; the rest are in nursery rows. There are 50,000 Japanese tea-plants in the market, and no buyers of any account. A company of Japanese tea-culturists, after a year's proof, is now setting out over 100,000 tea-plants near Placerville, intending to make tea for consumption. A gentleman living in Japan is having a plantation of 30,000 tea-trees made on Samuel Brannan's land, above Calistoga. That enterprising land-owner lends every encouragement to the planters, so that—though our own farmers decline it—strangers are forcing upon us this interesting and profitable industry. There are roots of the camie in town. The great profits of this fibre are well assured, and its cultivation is rapidly supplanting cotton in Louisiana and Texas. Yet it is up-hill work to get our farmers to take hold of our fine perennial plant. Farmers, as a rule, are not given to enterprise. But, unless they do venture on some variations from wheat culture, the outlook for agricultural profits is not encouraging.—*Alta.*

VULGAR LANGUAGE.

There is as much connection between the words and the thoughts, as there is between the thoughts and actions. The latter are not only the expression of the former, but they have power to react upon the soul, and leave the stain of corruption there. A young man who allows himself to use one vulgar or profane word, has not only shown that there is a foul spot upon his mind, but by the utterance of that word he extends that spot and defames it, till, by indulgence, it will pollute and ruin the soul. Be careful of your words and of your thoughts.

If you can control the tongue, that no improper words are pronounced by it, you will soon be able also to control the mind and save it from corruption. You extinguish the fire by smothering it, or by preventing bad thoughts from bursting into language. Never utter a word anywhere which you would be ashamed to speak in the presence of the most refined woman, or the most religious man, Try this practice a little while, and you will soon have command of yourself.

PRODUCTION AND CONSUMPTION OF BEER.

The quantity of beer produced in Europe every year is stated to be 5900 millions of liters, or 1,250 millions of American gallons, and the value of this ocean of beer is estimated at 700 millions of francs or 140 millions of dollars in gold.

The following is a statement of the average consumption of beer per head, in the principal countries of Europe.

Every Bavarian drinks on average 134 liters p. annum, every inhabitant of Great Britain 113 liters, of Wurtemberg 104 do—of Austria 32 do—of Switzerland 20 do—of Prussia 19½ do—of France 15 do—of Sweden 11 do—of Spain 2 do—of Russia and Italy only 1 liter.

What immense difference therefore must not be between the bodily condition of a Bavarian and Italian!

THE RAILROADS OF EUROPE.

A train composed of all the locomotives and railway carriages in Europe would reach from St. Petersburg to Paris, and would contain 400,000 passenger carriages and 500,000 luggage vans.—The railways of Europe are carried over 62,000 large and small bridges, and go through thirty-four miles of tunnel; 150,000,000 hundred weight of iron has been used for the rails, and 80,000,000 hundred weight of coals is required yearly to feed the engines. The network of European railways represents a length of 70,718 miles; 17,000 locomotives are employed on them, and the distance these travel during the year is 80,000,000 miles.

STRAWBERRIES IN NEW JERSEY.

The West Jersey Fruit Growers' Association, which includes the large growers at Cinnaminson, Morristown, and all that way, have sent us a report of a meeting held "5th month 10th," whereat a vote upon the best five varieties was taken. The result was as follows: Albany (Wilson), Agriculturist, Lady Finger, New Jersey Scarlet, and Downer's Prolific. This strikes us as a most sensible vote. The Wilson takes the lead, the Agriculturist is next; this variety on some soils is wonderful. Then comes the Lady's Finger, which is the firmest berry of which we have any knowledge. New Jersey Scarlet we do not know so much about, but it is found profitable in Burlington Co. Downer's Prolific we are glad to see in the list. It is sour and not very firm, but for a near market we have no doubt it is a profitable berry.—*American Agriculturist.*

English papers announce that John Bright has received from Mr. Pullman the offer of a free ride from New York to San Francisco. Mr. Pullman promises, if Mr. Bright will come to America, to carry him and as many of his friends as he may like, across the continent, in a special train of parlor and drawing-room cars, stopping whenever they please on the route, and making each halt as long as he likes.

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attaches to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Gum, or Gum:

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H.&L.

Is on the red cover of the packages

Railroad Lands.

CENTRAL PACIFIC RAILROAD,
LAND DEPARTMENT.

Sacramento, March 1st, 1867.

The following statement is made for the information of those who desire to purchase Lands from said Company:

1st. Congress has granted to the Company, all the alternate sections of the public lands designated by odd numbers, within a distance of 20 miles on each side of the railroad;—excepting lands to which a pre-emption or homestead claim had attached prior to the 12th of September, 1862, and excepting lands reserved by the United States as mineral.

2d. The Company has no interest in even sections. To constitute a valid pre-emption or homestead claim within the above exception, the party must have resided on the land prior to September 12th, 1862, and continuously since that time. He must also on that day have been over twenty-one years of age and be the head of a family and have filed his claim in the United States Land Office within the time required by law. If he has not these requisites, or has neglected to file, he will have to buy of the Railroad Company.

3d. All persons who desire to purchase lands from the Railroad Company, including settlers, pre emptors, and other claimants, should make application to the Land Agent, B. B. Redding, at the Land Office of the Company, in Sacramento, either personally or by letter, describing the land by legal subdivisions. This application will be filed and the party will be allowed three months to complete the purchase, and during this time the land will not be sold to another without giving such applicant thirty days previous notice. If the purchase is not completed within three months, the land will be open to purchase by others.

4th. Persons who have valid pre-emption or homestead claims to any tract on an odd numbered section, can purchase the same from the Railroad Company at the Government price of $1.25 per acre in greenbacks, and upon the usual credit of five years if they so desire, by filing an abandonment of their claim in the U. S. Land Office, blanks for which will be furnished by the Land Agent of the Company. Such purchase from the Company has these advantages over a purchase from the Government: The party can leave the land if necessary—he can sell or mortgage it—he is saved the payment of lawyers' fees and expenses of witnesses to go to the Land Office to "prove up" his claim—he can get his title perfected in less time—and he can buy on credit at a low rate of interest.

5th. Actual occupants of lands belonging to the Company, will generally have a preference in the purchase at the regular price. No addition to the price is made where there are improvements on the land made by the settler. Where there are conflicting claimants who apply to purchase, an adjudication of their respective claims will be made by the Land Agent, upon due notice given to both parties.

6th. No lands are sold by the Company or the Government, until after they have been surveyed and the plats returned to the Land Office.

7th. The Company sells ordinary agricultural lands at $2 50 per acre, in gold (except sales to pre-emptors as above). Timber lands, lands in the immediate vicinity of the railroad, and tracts having special value above ordinary farming lands, will be sold at prices and on terms fixed by the Board of Directors.

8th. Persons desiring to do so can buy on a credit of five years by paying twenty per cent. of the price down, and interest annually in advance on the remainder at ten per cent. per annum. Thus a purchaser of one hundred and sixty acres at $2 50, which amounts to four hundred dollars, will pay twenty per cent., or eighty dollars, with interest on three hundred and twenty dollars, which is thirty-two dollars—in all one hundred and twelve dollars, paying each year thereafter thirty-two dollars interest, and the three hundred and twenty dollars at the end of five years. His three hundred and twenty dollars can be paid at any time within the five years, but not by installments, and the purchaser will then be immediately entitled to a deed

9th. Applications to purchase lands can be filed in the Land Office of the Company at any time after the same have been surveyed by the Government; but no applications will be acted upon until three months after the maps have been filed in the United States Land Office. Occupants of the railroad lands who desire to purchase should therefore be prompt in filing their applications in the office of the Company within this time. Blank applications will be furnished to all who desire to purchase. No sales will be made except by legal subdivisions according to Government surveys. Purchasers can buy as large an amount of land as they may wish.

10th. No sales are made by the Company until the land is listed over to it by United States Land Officers. Purchasers are thus assured that the title they obtain is perfect.

B. B. REDDING,
Land Agent C. P. R. R. Co., Sacramento.

THE LAWS OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.

2. If subscribers wish their papers discontinued, publishers may continue to send them until all charges are paid.

3. If subscribers *neglect* or *refuse* to take their papers from the office or place to which they are sent, they are *held responsible* until they *settle* their bills and give notice to discontinue them.

4. If subscribers move to other places without informing the publisher, and the paper is sent to the former direction, they are held responsible.—Notice should always be given of removal.

5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is *prima facie* evidence of intentional fraud.

Postmasters would oblige by a strict fulfillment of the regulations requiring them to notify publishers, once in three months, of papers not taken from their office by subscribers.

Under the law of Congress, papers are not charged postage in the county in which they are published.

GRAIN AND FLOUR MARKET.

SAN FRANCISCO, March, 24.

The late rains have changed the appearance of business as much as the hills and valleys—life and animation has taken the place of dullness and despondency—Grain pours into our city now in large lots, but it finds a poor market and slow sale.

Nearly 300,000 centals of Wheat was brought to our city in February, an unusual quantity, but as there is no export demand, Wheat accumulates here largely. How unfortunate that this Wheat was not sent away four months ago and the value returned to our business circle—there is a large amount still on hand to carry over.

The Wheat that is now going abroad is mostly on account of the owner, who risks the chances of sale in Europe, or taken on Ships account, as freight was not to be had. Tunnage is very low now, £2, 6d., and £2, 3d. Liverpool rates for wheat have fallen from 9s 6d, to 9s 3d, in a few days, this would prove a loosing business with wheat here at 162½ @ 165. New York rates are low also, a loss to ship for Farmers must loose that have held on to their wheat.

From every source and from every part of the State we have cheering intelligence of the fine condition of the crops and the hopeful feelings of our Farmers. We have carefully investigated the condition of the crops in several sections, and find wherever due attention has been given to season, plowing and seed, there will be good and abundant crops. On the contrary, where late and shallow plowing, late planting and poor seed, there the reward will be "as they sow, so will they reap."

There is every assurance that the crop of wheat of 1870 will be the largest ever raised in California.

FISH.

[H. S. Burr.]

The Fish supply is most satisfactory, all the best kinds now had daily. Our Eastern epicures are after our Salmon.

H. S. Burr of the California Market has been shipping Salmon to Chicago, New York, and Boston, also to London, thus the lovers of this splendid fish, in Europe, send to California for it.

Salmon, Salmon Trout, and Tahoe Trout, always to be had at the stall of H. S. Burr.

PREMIUMS.

THE EARLY ROSE POTATOE.

The wonderful celebrity which is now being attained by the unprecedented excellence of the "Early Rose Potatoe," its great productiveness beyond that of any other potatoe known, its early maturity (7, 8 and 9 weeks) surpassing all others, and its great superiority in *quality*, induces us to try to spread its culture as widely as possible.

We therefore will now offer to every *new subscriber* to the CALIFORNIA FARMER, from the commencement of our new Volume, Four pounds of the "Early Rose Potatoe," mailed to them *free of cost*, as a PREMIUM for 1870. This will give them seed for another year, equal to 200 to 300 lbs.

P. S. All new subscribers to our present Volume who kindly sent their names before this, if they will send us word they will use this seed they shall have the parcel mailed to them free.

Of the FRENCH ANNUAL SPECIES, for sale.

The above will be sold on the best of terms.

P. S.—Orders addressed to A. P. Smith, will be promptly attended to.

Sample Trees can be seen at the FARMER OFFICE, where information of the quality of the Trees and the price can be had.

A. P. SMITH.

Of the well known SMITH'S GARDENS,

Sacramento City, Cal.

COMMISSION SALES-ROOM —AND— Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent on the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery.

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns, and which we have the exclusive sale for this Coast.

We also call attention to the

NEW GATE.

A most valuable invention, particularly to Farmers and Stock Raisers. County Rights for sale.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

The following are the kind of Goods imported or consigned to us for sale and which can be offered on the most favorable terms:

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them, with the utmost confidence. In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown.

FINEST MIXED LAWN GRASSES,
FINEST MIXED GRASSES FOR PERMANENT PASTURES.
FINEST MIXED GRASSES FOR SHEEP-WALKS
FINEST MIXED GRASSES FOR MEADOW-LAND.
PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR CHILI CLOVER,
KENTUCKY BLUE GRASS.
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental

TREE SEEDS.

TOBACCO SEED,
COTTON SEED,
COFFEE SEED,
TEA SEED.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

These will be ready in the months of November and December.

Collections can be forwarded by post at the following rates:

50 Packets choicest and best			$10 00
25	do	do do	5 00
12	do	do do	3 00
50 Packets Good Selected			6 00
25	do	do do	3 00
12	do	do do	1 50

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference.

Silk Culture.

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

FLOWERING BULBS.

Lilies, Tulips, Hyacinths, Amaryllis, Anemones Ranunculus, Narcissus, Tuberoses, Peony-Roots, Crocus, Snow-Drops, Very Choice Gladioli,

Choice collections of Flowering Bulbs, comprising all the most showy and leading varieties from $5 00 and upwards.

EVERGREEN AND DECIDUOUS SHRUBS, ORNAMENTAL TREES.

FRUIT TREES.

The newest and most approved sorts:

Peaches, Figs,

Sections from $2 50 to $3.00 per dozen Blades.

Bars and Sections complete at $1 25 per running foot. 33-10.

JUST RECEIVED—GOOD THINGS.

WE have received the following, which are among the good and rare things needed:

Fresh Cranberry Plants,

(The Large Bell Variety.)

Ramie Seed, Fresh.

WATERMELON, CANTELOUPE AND *MUSKMELLON SEEDS,*

(EXTRA QUALITIES.)

Flower Seeds, Choice,

MIXED LAWN-GRASS, ETC.

For sale at the "FARMER" OFFICE

"EARLY ROSE" SPROUTS.

A choice lot of Sprouts of the "Early Rose" Potatoe all ready for Planting.

These SPROUTS are put up in packages of FIVE and TEN pounds each—Price, $2 50, and $5 00.

It is estimated that a five pound parcel will produce at least TEN SACKS of first quality of this most productive Potatoe.

For Sale at the FARMER OFFICE.

LETTER FROM AN OLD CALIFORNIAN AT THE EAST.

NUMBER ONE HUNDRED AND ELEVEN.

New York, March 20th, 1870.

OBITUARY NOTICES.

EDITOR CALIFORNIA FARMER:

One of the saddest duties which it is my mournful satisfaction to perform, is to bear witness to the worth of those friends whose names appear in the death-record of the *Weekly Bulletin*. I have found two lately, and I may be permitted to mingle my tears with those which I know have been freely shed. The first, the name of Mrs. Nagle, is a mutual possession. Among the ladies who adorned the society at the Rassette House, in its palmy days, none was more universally esteemed. Her presence was always an occasion for congratulation, for the influence which she exercised was happy in the extreme. The sparkle of her conversation, no less than the pure spirit which elevated it, inspired us all with a keener wish to add the best of our gifts to the common stock of its well-remembered hours of leisure. I shall never forget the friendships of those days; and when Memory pictures the merry group around the bright fire in the back parlor of the old Rassette, I shall always remember, as one of the brightest and best of its circle—Mrs. Nagle.

The second name, that of Mrs. Bowie, recalls the recollection of bright days in Benicia, before the War. Then Judge Hastings, Judge Curry, Judge Whitman, Mr. C. J. Platt, Mr. Pollock, Mr. D. N. Hastings, the officers of the army, stationed at the post, and other gentlemen, entertained most hospitably; and its society was something to remember. Among the young ladies who gave a charm to it, was Miss Ada Hook. I can shut my eyes and see many a *fête* in which she shone like a star. Amiable in disposition, pure of heart, cultivated in mind and refined in manners, she was beloved by all who knew her. I am told that the bud which was so promising, blossomed into a beautiful flower. Alas! that it could not have lived to attain perfection. May the Angel of Death have transplanted it to the garden where it will bloom for eternity.

CENTRAL PARK.

The sunshine is becoming glorious, and yesterday I spent many an hour in the Central Park.—The snow yet remains in places, but the atmosphere was not chilled by it. I availed myself of the Park omnibus, which is a great source of enjoyment to those who do not keep carriages of their own. The scene at four o'clock was brilliant in the extreme. The summer-like weather called out all the butterflies, and the magnificent equipages were alone worth looking at. Lent has brought rest to the fashionable world, and the occupants of the vehicles did not look so *blasé* as usual. We are in dread lest the Ring (the terror of New Yorkers) should touch our Park. It is so attractive that it has become almost necessary to us, and if the dirty hands of politicians touch it, we may have to mourn its decay.

PICTURE GALLERIES, CALIFORNIANS, GOLD, ETC.

The picture-galleries are as brilliant as ever; and Knoedler's, on Fifth Avenue, is a place where your correspondent often drops in to enjoy the sensation of the hour. Bogardus has opened a new gallery, and it promises to be one of the most popular ones in New York. Mr. Bogardus is the leading photographer of New York, and a man of cultivated taste.

The Grand Hotel has become a resort for Californians, and I have met a number of friends there recently; among them, Colonel and Miss Catherwood, General and Mrs Fry, Mr. Tiffany, and Mr. Asa T. Lawton.

I had the pleasure of entertaining Mr. Dundon, formerly Professor of Ancient and Modern Languages at the Benicia College, at dinner to-day.—He is now Vice-President of the New York Female Normal School. New York, at present, is full of Californians, and we ought to have a club-house here.

The fall in gold is yet the topic of conversation, and prices of all imported goods are cheap enough at present. The rise of the Bonds of 1881 to 2-per-cent. above par is a great triumph for the Secretary of the Treasury. To be prosperous as a Nation, our Public Credit must be made and kept good. The speech of Senator Revels is well spoken of, even by wise men who are opposed to him. M. A. S.

OUR LADY CORRESPONDENT FROM PENN.

LETTER NUMBER NINETEEN.

GREEN TREE, PA, March 16th, 1870

DEAR COL.

I cannot agree with you when you say that "A. K." has hit the nail on the head, for it seems to me that he strikes very wide of the mark indeed.

Assertion is not argument—the first does intimidate me, and the second I confess is out of my line. But if your correspondent should ever have any of the latter commodity to offer I beg leave to refer him to the firm of Anthony & Co., Office of the *Revolution*.

Whether Napoleon was a truly wise man or not I do not pretend to be able to decide in the face of so much conflicting testimony, but he certainly said a wise thing when he asserted that, "what France needs to make good citizens, is good mothers."

The saying is very familiar to me—the womans rights folks quote it so much, to tell the truth I am growing just a little weary of hearing it—and am tempted to ask if good fathers are not quite as necessary to the welfare of the State as good mothers?

I must say that I am not troubled by any doubts whatever about the wisdom of the man who asserts that all men need props to keep them upright, and then offers his leader clinging woman for that purpose. I detected the incongruity at once, and cannot assign him a seat beside Plato.

The only time that "A. K." hammer comes dangerously near the head of the nail, is when he tells us that we are ignorant fools. Many of us are ignorant and foolish, very few of us are well educated, we know it and feel it in the very depths of our souls every day of our lives.

But is it not a little hard after shutting the doors of your Colleges in our faces, to turn around and twit us with our ignorance?

Suppose that there are old bachelors in the land, it is not every man that has a call to be a husband. I know several married men who were evidently intended by nature for old bachelors, but unfortunately did not find it out until too late, and the consequence is misery.

Doubtless there are many old bachelors who have likewise mistaken their vocation—for instance those glorious old fellows out in Wyoming,—what splendid husbands they would make.

I think sometimes that men, in looking at this vexed question of womans rights, do not make sufficient allowance for the diversity in woman—they are too much in the habit of lumping us.

They should recollect that daughters do sometimes take after their fathers, as the saying is.

I often wonder that those kind fathers manifest so little sympathy for the poor little women so very like themselves.

I would say in conclusion to all men—do not set your faces like a flint against this question of woman suffrage,—it is mans question as well as womans, they are in the same boat. Do not sentimentalize about what ought to be, but look around you and see what is.

On every side you will see women struggling to make a living, you must learn to look at these workers, not as women merely, but as human beings, fighting the battle of life, against fearful odds.

Now if the ballot be a useful weapon in the hand of the working man, who shall say that it will not be the same in the hand of the working woman?

We do not know until it is tried—many earnest men and women are convinced that it is worth trying—anyhow it does not seem a finite creature to assume the prerogative of the Almighty, and say, thou shalt, and thou shalt not. As to cant, that is so prevalent about the danger that threatens the domestic relations of the sexes, I have no patience with it, or with those who countenance it.

What God has joined together the ballot is not going to cut asunder.

Yours truly. JENNY DARE.

THE EMIGRANT'S ENQUIRIES.

[The following letter, addressed to the Postmaster of this City, was handed to us, and, as it will be curiously interesting to our readers; we give it *verbatim*, to show the feeling that exists among a large class of people who know but little of our State.

We very cheerfully send a dozen of our FARMERS for general distribution. We do not publish a *low price paper*, nor do we anticipate a large addition to our List of Subscribers, as the sum of *Five Dollars* would alarm those out South and West, where cheap papers abound.

We can, however, assure our enquirers that they will always get the value of their money if they read the FARMER, although we cannot give them that trashy kind of matter that too often fills so many Journals of this period. We can always give them the Markets, and much valuable information touching our State. The writer can see our club rates for Subscribers, and by obtaining *Five* Subscribers, he will receive a copy for himself *free*.

We have many Subscribers already in old Virginia—the MOTHER OF STATESMEN—and should be glad of more.—ED. F.]

MARCH 22ST, 1870.

MR. POST MASTER

Dr. Sir I Drop you a few lines you will please give it to Some Editor who publishes A Cheap paper and will give the general news & markets, by doing so you will oblige me

To the Editor that may Receive this

You will please send A Sample Copy of your weekly paper so I may know the Price of it in paper Currency as I Desire to Subscribe for one in your City and If it meets with your approbation I think I Can git more Subscribers beside myself, I have heard the Climate of California well spoken of and one of my leading objects is to git acquainted with that Climate, Country and government.—I saw Account of a man who visit San franc'sco about 22st last Nov. I State some things he said as follows

That the thermometer stood at 75 Degrees for 10 Days during the time he was there, and that they had told him there, that it did not vary more than 5 Degrees in the year he said it never snowed, no Ice, nor frost, and the Coldest time in the year was July & August when the wind Blowed from the Sea. He also Stated that it did not Rain from May till November, nor Dew. He said they Cut wheat & Barly in May; If the above Statements be true or fals, you will say so, or If you will give me any other Information it will be very acceptible to me, as I have some Idie of Emigrateing to your State at some futer time and would be glad of any knowledge of the Climate & Country, what writing you do you can wrap up in the paper and secure the paper by a strong wrapper and write the address as follows

Marion County West Va.

[REPLY.]

We can assure the writer that the climate of California cannot be surpassed. The description given of the weather is very good for a portion of our State, but the temperature of the Counties varies, and in San Francisco it is much more variable. Our harvesting of Wheat and Barley is very early, and, in some instances, Barley has been harvested in May, but June and July are our real harvesting months.

As the *Law* forbids our writing a letter and sending it done up in our FARMER, we do our writing here, so you can be fully answered in type, and others get the same information, also.

We want all the good families we can draw to our State, for *good, intelligent*, and *well-educated* people will always build up a State; all others only hinder its prosperity.

WHAT HORSES BRING.

Horses of great reputation, says the *Turf, Field and Farm*, have always commanded great prices. At Newmarket, in 1805, a bay colt, by Pipato, sold for $75,000. In the same year a two-year-old colt by Benningborough, a two-year-old by Volunteer, and a three-year-old filly by Sir Peter, were sold for $75 000 each. For the celebrated horse Shark $50,000 was refused, and O'Kelly declined to accept an offer of $100,000 for his stallion Eclipse. Tradition says that the Duke of Devonshire refused for Flying Childers the weight of the horse in gold. A few years ago the great sire Stockwell could not be bought for $100,000, and we presume that when Gladiateur was carrying everything before him on the English turf, the Count de LaGrange would not have parted with him for $150,000. Coming to America, we find that nearly $15,000 were paid for Lexington, and that his son, Kentucky, was sold for $40,000.—Mr. Alexander refused $60,000 for Asteroid, Kentucky's half-brother, and Norfolk, another half-brother, was valued at $40,000.

A correspondent of the *New York Rural* recommends the following lotion for chilblains: 1 drachm tincture of opium; 2 drachms tincture of arnica; 1 drachm best oil of peppermint.

Home Correspondence.

NELLIE TO JENNY DARE.

[We give the following letter on account of its beautiful simplicity and truth. Some months since, "Jenny Dare" wrote to "Nelly," and this is "Nelly's" answer. If our little girls would cultivate love and good-will by such kindly correspondence, their time would be well spent, and their hearts made better.—ED. F.]

SACRAMENTO.

DEAR JENNY DARE:

I thank you so much for the sweet letter you wrote me, in the FARMER, a little time ago. You cannot tell how proud I was when I read it in Grandpa's paper. I was wishing for a nice Valentine, and I know it was the best any little girl ever had. I would have answered right away, but I was in the country, getting wild-flowers; they are so beautiful now! How I wish you were here to pick them with me! perhaps you would not go with a little girl like me, but I would love dearly to have you.

You call me to come and look out of your window. Oh! if I only could do so, and see the beautiful snow come down! then, dear Jenny Dare, when it stopped snowing, would you let me go out and play in it? We do not have any snow in Sacramento; but last year I went to the mountains on purpose to play in the snow, and oh! I had such a splendid time!

You guessed that I had blue eyes and golden hair. I have blue eyes, but my hair is about two shades darker than flaxen. I am four feet eight inches in height, and only eleven years old: Am I taller than your writing-desk?

Now, you will not laugh at my poor little letter, will you? but please answer it when you have time, and do not forget LITTLE NELLY

San Diego, Cal., March 7th., 1870.

COL. WARREN, DEAR SIR.

I see a notice in the FARMER that you would be pleased to receive curosities from all parts of the State. I herewith send you a specimen of a shrub that grows in the Mountains, 60 miles East of the town of San Diego. There is only a few of the Bushes, and they are confined to one cleft of rocks. I do not know what they are, but they are a beautiful evergreen, and are now in full bloom. Later they are full of beautiful red berries, and would make a very pretty addition to the ornamental Garden. If it is of any value I can get plenty of seed, please let me know.

Inclosed I send for your examination, some Animal Gum, it is deposited on the bark of the Live Oak. It appears to be the home of some kind of Bug or worm's egg. At this season of the year there is a small worm in the center of the small balls of wax. It is deposited in small particles in size, equal to a grain of coffee, and of a yellow color,—the Indians gather it to chew.—When they first commence to chew it, it is very bitter and requires about an hours constant chewing to get the bitter out of it, they can then chew one quid 3 or 4 months. It does not get hard by constant chewing, it will stretch out very long or thin, it is inclined to draw up or contract, and has some properties of India-rubber, but unlike Rubber—the teeth can be forced through it.

I have not been able to find any one that can tell me anything about it, and therefore I think it may be something new and strange, so I send it to you, it may not be unknown to you and yet may be rare—I have sent to you through a friend—If the things are known to you I would be well pleased to learn what they are.

Respectfully yours.

A. M. GASS.

[REPLY.]

The Shrub of which you send us a sample, is *Mahonia Aequifolia*, of the natural order of *Berberaceæ*, indigenous to North America, and discovered by Bernard M'Mahon, in 1824, a lover of Botanical Science. The *synonymes* of this order are, *Berberis Aequifolium, B. Pinnata, M. Diversifolia, B. Nervosa, M. Glumacea and B Repens.*

It is a beautiful evergreen shrub, with yellow flowers, and clusters of red berries. Paxton describes *Mahonia Fascularis* also, as indigenous to California, and this may be his species in Fruitry time we could decide better.

The seed is worth preserving, as this beautiful shrub with its glossy holly shaped leaves, makes a much more beautiful shrub for our gardens than many kinds that are now grown from foreign species. We shall hope for the seed from our kind correspondent in due time.

Of the Oak Gum, we will simply say now, that it is the sap of that species of oak, exposed to the sun, drawn from the tree by the puncture made by the worm that is contained in the ball of gum, as described by the writer. We will have the Gum analyzed and speak again of this matter, for it is a subject of considerable interest. We return thanks to our correspondent, and shall be glad always to receive such letters, and give them due attention.

INSENSIBLE INFLUENCE.

I heard something new to-day, and I resolved to turn it to advantage. Having a new watch, which was warranted to be the perfection of workmanship, I stepped in at the office of the man who sold it, to compare it with his chronometer. There was a variation of two or three seconds. Turning upon me, the gentleman asked, "Has it ever been regulated for *you*?" The emphasis of this question excited my curiosity. Seeing by my puzzled look that I did not understand him, he informed me that every watch should be regulated to and for the person who wears it; that the same watch goes differently when worn by different men; that he could not account for the difference; he did not know to what insensible, impalpable influence to ascribe it,—whether to different degrees of caloric, or animal magnetism, or methods of motion, or to some nameless and unknown force, but the fact itself was indisputable. It was known by all intelligent watchmakers, who advised their customers to adjust their own watches, by a recognized standard, to their own individual temperament and habits. This was something I had never heard before, and as I walked away, my thoughts naturally followed the clue, while I was threading my way homeward through the crowded streets. What a hard lot some watches must have, seeing they are so sensitive! What a deal of trouble to keep up to time for one's watch, when the heart of the man who carries it in his vest-pocket is cold and hard as polar ice. How difficult it must be for another watch to be steady, when it is forced to keep company with a man who is always fussing and fretting and fuming in a fever of passion and irritability. As well might you think that a watch would be undisturbed in its movements, if thrown up and down on a slack rope all day, as to be attached to a person who lives by impulses, jerked about by sudden caprices—now hot and now cold, now kind and now sullen, now profuse in expressions of love, and now at the opposite pole of petulance and anger. If there is any truth in the theory of the artisan, can a man expect a well-regulated watch who is not well-regulated himself? If metallic wheels and springs are affected by the invisible influence of their owner carrying them next to his own person, how is it with living souls with their delicate sensibility? How is it with children? with servants? Shall we expect them to be more perfect than ourselves? Are they not made to go fast or slow or irregularly by their proximity to us? Is there no influence, impalpable to the senses, which flows from us to them, with no thought or purpose of ours? If you would have these most delicate and sensitive mechanisms—sensitive to a word, a look, a turn of manner—go regularly, be sure that you are well regulated yourself. Be thoroughly good, and without taking thought, you will be truly useful. There is power in passive goodness. Just what a man is himself, he helps others to be by an influence which is insensible but resistless.

If a watch—so I continued to muse—is affected in all its movements by invisible forces, why should it not be true of minds and hearts?—

[Thus speaks the *N. Y. Evangelist*, and speaks truly, too. Every human being that lives is more or less affected by those around them, and it is their duty to observe and learn, and endeavor to place themselves only within the good and genial influences that make one wiser, better and happier. "Why is it," says that beautiful writer, Lydia Maria Childs, "that we are drawn to one and we are repelled from another? Why is it that we sometimes meet a person—before a stranger;—a look in the eye, a touch of the hand, and we are friends forever, while there are thousands we have daily seen and met, but never knew them?" This is that *unseen* influence. It is for good; and this is the right kind of influence—the kind that makes the watch (the human heart) keep true time; and well would it be if all would be guided by this influence, for it is the "still small voice"—the chronometer of Divine part of our being.—ED. F.]

PREMIUMS.

THE EARLY ROSE POTATOE.

The wonderful celebrity which is now being attained by the unprecedented excellence of the "Early Rose Potatoe," its great productiveness beyond that of any other potatoe known, its early maturity (7, 8 and 9 weeks) surpassing all others and its great superiority in *quality*, induces us to try to spread its culture as widely as possible.

We therefore will now offer to every *new subscribar* to the CALIFORNIA FARMER, from the commencement of our new Volume, Four poundsof the "Early Rose Potatoe," mailed to them *free of cost*, as a PREMIUM for 1870 This will give them seed for another year, equal to 200 to 300 lbs.

P. S. All new subscribers to our present Volume who kindly sent their names before this, if they will send us word they will use this seed they shall have the parcel mailed to them free.

VINEGAR. HOW MADE FROM CIDER, WINE, MOLASSES, OR SORGHUM, In Ten Hours, without using drugs.
For Circulars, address F. I. SAGE, Vinegar Maker, Cromwell, Conn.

Agriculture.

WHAT I KNOW OF FARMING.

BY HORACE GREELEY.

ESSAY NUMBER ELEVEN.

DRAINING GENERALLY.

Having narrated my own experience in draining with entire unreserve, I here submit the general conclusions to which it has led me:

I. While I doubt that there is any land above water that would not be improved by a good system of underdrains, I am sure that there is a great deal that could not at present be drained to profit. Forests, hill side pastures, and most dry gravelly or sandy tracts, I place in this category. Perhaps one-third of New England, half the Middle States, and three-fourths of the Mississippi Valley, may ultimately be drained with profit.

II. All swamp lands without exception, nearly all dry soils, and a majority of the flat or gently-rolling lands of this country, must eventually be drained if they are to be tilled with the best results. I doubt that there is a garden on earth that would not be (unless it already has been) improved by thorough underdraining.

III. The uses of underdrains are many and diverse. To carry off surplus water, though the most obvious, stands by no means alone. 1. Underdrained land may be plowed and sowed considerably earlier in Spring than undrained soil of like quality. 2. Drained fields lose far less than others of their fertility by washing. 3. They are not so liable to be gullied by sudden thaws or flooding rains. 4. Where a field has been deeply subsoiled, I am confident that it will remain mellow and permeable by roots longer than if undrained. 5. Less water being evaporated from undrained land, the soil will be warmer throughout the growing season: hence, the crop will be heavier, and will mature earlier. 6. Being more porous and less compact, I think the soil of drained field retains more moisture in a season of drouth, and its growing plants suffer less therefrom, than if it were undrained. In short, I thoroughly believe in underdraining.

IV. Yet I advise no man to run into debt for draining, as I can imagine a mortgage on a farm so heavy and pressing as to be even a greater nuisance than stagnant water in its soil. Labor and tile are dear with us; I do not expect that either will ever be so cheap here as in England or Belgium. What I would have each farmer in moderate circumstances do is to drain his wettest field next Fall—that is, after finishing his haying and before cutting up his corn—taking care to secure abundant fall to carry off the water in time of flood, and doing his work thoroughly. Having done this, let him subsoil deeply, fertilize amply, till carefully, and watch the result. I think it will soon satisfy him that such draining pays.

V. I do not insist on tile as making the only good drain; but I have had no success with any other. The use of stone, in my opinion, is only justified where the field to be drained abounds in them and no other use can be made of them. To make a good drain with ordinary boulders or cobble stones requires twice the excavation and involves twice the labor necessarily expended on a tile drain; and it is neither so effective nor so durable. Earth will be carried by water into a stone drain; rats and other vermin will burrow in it and dig (or enlarge) holes thence to the surface; in short, it is not the thing. Better drain with stone where they are a nuisance than not at all; but I predict that you will dig them up after giving them a fair trial and replace them with tile. In a wooden country, where tile were scarce and dear, I should try draining with slabs or cheap boards dressed to a uniform width of six or eight inches, and laid in a ditch dug with banks inclined or sloped to the bottom, so as to form a sort of V; the lower edge of the two side-slabs coming together at the bottom, and a third being laid firmly across their upper edges so as to form a perfect cap or cover. In firm, hard soil, this would prove an efficient drain, and, if well made, would last twenty years. Uniformity of temperature and of moisture would keep the slabs tolerably sound for at least so long; and, if the top of this drain were two feet below the surface, no plowing or trampling over it would harm it.

VI. As to draining by what is called a Mole Plow, which simply makes a waterway through the subsoil at a depth of three feet or thereabout, I have no acquaintance with it but by hearsay—It seems to me morally impossible that drains so made should not be lower at some points than at others, so as to retain their fill of water instead of carrying it rapidly off; and I am sure that plowing, or even carting heavy loads over them, must gradually choke and destroy them. Yet this kind of draining is comparatively so cheap, and may, with a strong team, be effected so rapidly, that I can account for its popularity, especially in prairie regions. Where the subsoil is rocky, it is impracticable; where it is hard-pan, it must be very difficult; where it is loose sand, it cannot endure; but in clays or heavy loams, it may, for a few years, render excellent service. I wish the heavy clays of Vermont, more especially of the Champlain basin, were well furrowed or pierced by even such drains; for I am confident that they would temporarily improve both soil and crop; and, if they soon gave out, they would probably be replaced by others more durable.

I shall not attempt to give instructions in draining; but I urge every novice in the art to procure Waring's or some other work on the subject, and study it carefully: then, if he can obtain at a fair price the services of an experienced drainer, hire him to supervise the work. One point only do I insist on—that is, draining into a main rather than an open ditch or brook; for it is difficult in this or any harsher climate to prevent the crumbling of your outlet tile by frost.—Below the Potomac or the Arkansas, this may not be apprehended; and there it may be best to have your drains separately discharge from a roadside bank or into an open ditch, as they will thus inhale more air, and thus help (in Summer) to warm and moisten the soil above them; but in our climate I believe it better to let your drains discharge into a covered main or mains as aforesaid.

CAPITAL vs. LABOR.

[The following excellent counsel we commend to all our working men. This is the very vitality of freedom; and when employees assume to dictate to those who give them bread, they will soon learn, to their bitter cost, that they must go hungry.

We have always opposed these cliques of all kinds. They never do good, but always result in evil. We are glad to see these combinations falling to pieces; the quicker they pass away, the better for the wives and children of the working men.]

Wealthy selfishness on the one hand, and low, lazy selfishness on the other, will pit themselves against each other; the one to "grind the face of the poor," the other, by combinations and strikes, to bring on those undemocratic and unrepublican mobs and riots which have no justification in a free country. Where monarchies prevail, and where laborers are *owned* by the rich, and are forced to work for a paltry pittance or starve, there may be good cause for organized strikes.—When capital is controlled by a horde of indolent, titled gentry; where all the land in a kingdom is owned by about one twentieth of the inhabitants, and where nine-tenths of the people are mere serfs, with no voice in the government, there may be good reasons for strikes, mobs, riots, and revolutions. Not so, however, in a free country like ours, where every man is his own master. Here, each of us may "hire out" to whom we please, and make our own terms; or one may learn a trade, or set up in business, without let or hindrance. Here, where we have a hundred millions of acres of virgin soil as yet untouched by the husbandman, one may have a farm for the asking, or at the cost of surveying the plot. Under these circumstances, can "strikes" be justified?

If a man be not satisfied with his wages; if he can better his condition by a change of employers or a change of pursuits, it is his privilege and his duty to make the change. But he has no moral right to enter into league or conspiracy with others to prevent individuals from taking the vacant places. Are employers not to have a voice in fixing prices and in the selection of their employees? Men may combine and work together in crews, bodies, and communities; they may also quit work in bodies; but they may not override the law, or break the heads of those who refuse to join them.

When capital and labor shall be organized on true Christian principles; when Acquisitiveness becomes sanctified by Benevolence and Conscientiousness, we shall act on the Golden Rule, and "do unto others as we would have others do unto us."

Wealthy men, without godliness, are arrogant, vain, pompous, domineering; they have no care or compassion for others. They get all they can, and keep all they get. Mammon worshipers are common throughout the world—but they are not, as a class,—quite the contrary. Than a grabbing, sordid, miserly man, nothing is meaner; nothing more loathing to a high-minded, benevolent, honorable nature. Mammon worshipers include misers, thieves, robbers, gamblers, pirates, and the worst specimens of humanity. Such creatures live in the base of the brain without having a ray of the goodness, greatness, and generosity of the self-sacrificing benefactor.

We do not object to riches when honorably and honestly acquired *for a good purpose*. It is not money which is "the root of all evil," but the *love* of it. He who loves money for its own sake is not only a sinner, but must of necessity suffer an ungodly desire, which will inevitably drag him down.

Nor is wasteful prodigality to be justified.—Money is often used so injudiciously as to result injuriously to those on whom it is expended. Think of giving money to a drunkard, a gambler, an idle spendthrift. Of course it would only worse their condition, and do the recipient no good. One without economy has no business with money.

Both capital and labor have a high and holy mission to perform. The comforts of life are to be attained. Children are to be educated.—Christianity is to be disseminated throughout the world, the Gospel is to be preached to every people. Charities for the infirm, asylums for the insane, imbecile, inebriate, deaf, dumb, and blind, are to be established; churches built, libraries established, schools and colleges endowed, scientific exploring expeditions sent out, and a thousand other objects for which capital is needed.—What a blessed thing it is that rich selfish men only hold their property in trust for a short time,—that they can take nothing—absolutely *nothing*—out of the world with them! He is the best man who makes the best use and disposition of all his talents, all his time, and all his money.

When "men of means" come to realize the truth of the saying, that "it is more blessed to give than to receive," they will *seek* opportunities for laying up treasures in heaven by doing good in this world. They will lift up the lowly, lend a helping hand to the young, assisting them to help themselves, by giving them an education, teaching them some useful art, and so *preventing* them from coming to want or falling into vice and crime.—Oh, the good that good men may do with their money! Why will so many let the lucre they possess corrode their own souls? Why will they permit it to come into the hands of wicked attorneys, to be frittered away? or leave it for dissipated sons, whom it will certainly ruin? "Put a fool on a horse and he will ride to the bad." God is not mocked. A just retribution will come to the selfish, the wicked, and to the careless.

Capital and labor must be so adjusted that there shall be no clashing, no mobbing, rioting, striking, or unkind feeling—each must accord justice to the other, and all work for the good of mankind, and for the acceptance of Him who judges righteously.—*Phrenological Journal.*

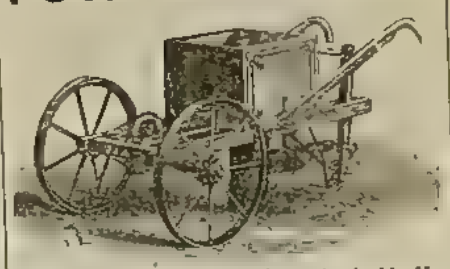
TRUE'S IMPROVED POTATO PLANTER.



This is, undoubtedly, one of the most valuable Machines adapted to Agricultural purposes ever introduced

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such sized slices as the farmer may prefer; drops these pieces with the most perfect regularity, and covers them perfectly, and does all this as fast as a horse can walk over any ground that can be plowed

No intelligent farmer can see that an implement with which one man can, with the aid of a horse plant six acres of potatoes in a day, is of inestimable value—because the days in which PLANTING can properly be done are very few, while he has all SUMMER and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attending to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor Saving Implement for the Pacific Coast.

We shall also sell 'County Rights" for this Implement, and a good Mechanic can make a fortune with it.

Particulars and Catalogues can be had at our office.

WARREN & CO.,

320 Clay street, up stairs.

EARLY

ROSE POTATOES.

A Splendid lot of these,

Best of all Early Potatoes,

And raised here in California can be had at the

New York Prices.

We invite all Potatoe growers to call and see them at our office, where we can show them a sufficient number of testimonials as to their Quality and Productiveness to convince all that the EARLY ROSE is the very

BEST EARLY POTATOE KNOWN

One of the grand features of this wonderful Potatoe is that it succeeds most admirably in high, dry lands—Some grand results we have here in reports now to be published.

Those who want Pure Seed of California growth, and at New York rates or what it would cost to bring them here, can have larger, fairer and fresher Seed than any that can be imported

Miscellaneous.

OIL CAKE MEAL

THE BEST FEED KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal, and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent; Barley Meal, 13 per cent; Oat Meal, 16 per cent; Oil Cake Meal, 21 2 100 per cent. For life-sustaining properties to all stock are equal to sudden changes of weather or over-driving! For no equal

For MILCH COWS particularly valuable, increasing the quantity of milk and giving its quality to a far greater extent than any food known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food; generally mixed with the mash of bran, slops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day

FOR BEEF CATTLE it has fattening properties which cannot be found in any other food—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair.

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($25 per ton,) it is the cheapest food in market. It is now selling in New York at $42 per ton, gold; at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable food known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Food Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

Gardeners, Foremen, Etc.

Those who desire to secure good and reliable Gardeners, Orchardists, Vine-pruners, and Foremen upon their Farms, can be supplied from our Office by sending notice of such wants, and giving us the special duties they desire performed, the wages they will pay, and the particulars of board, washing, etc.

It will be our purpose to send out no person that are not fully qualified for the specific duties desired, nor any man who is not of good character, nor shall we send out any man until, by a proper test, we know he is qualified in every respect.

Having long experience in this business and knowledge of what is wanted, we shall only give employment to the *Best Men.*

For our time, examinations, correspondence, etc., we shall expect a compensation that will repay us.

Horticulture.

ROTHSCHILD THE WINEGROWER.

The impression prevails in this country that wine is a source of expense to the rich consumer without affording more than a bare living to the poor producer, that to drink it may be good refreshment, but to grow it is a poor business.—Even Jefferson says that Americans would do better by raising grain to exchange for wine than by growing wine themselves. True it is that a vineyard cannot be made to produce a hundred per cent profit the year after it is planted. Its excellence must be the fruit of generations, if not of centuries; and its reputation can only succeed and cannot anticipate its excellence. Yet vast fortunes have been made, even in America, by judicious and persevering attention to this branch of industry. What has been accomplished by capitalists in France may be seen by the result of an investment of Mr. Rothschild.

The commune of Pauillac is the pearl among all the townships of Medoc. There the vine occupies nearly two thirds of the entire superficial area. The vineyards have been estimated to contain 1370 hectares, but this quantity cannot further increase, because some years since the last inch of ground which admitted of it, has been turned to this use. The rest of the township is occupied by the swamps and marshes which overspread about 390 hectares, and are in great part planted with pale osiers; the gardens, the buildings, etc.; the soil of Pauillac has so high a price that the owners have not left a rod unplanted with vines.

Winegrowers who understand the importance of geology in connexion with their pursuit will tell you that the soil of Pauillac is generally mixed with gravel, and rests on a subsoil of sand stone exceedingly friable and highly propitious to the growth of the vine. Without dwelling on this purely scientific question we cannot but mention a peculiarity which has been pointed out to us.—As has just been said the soil of Pauillac is composed principally of a silicous sand and of quartz pebbles, some of which are of extraordinary transparence. The lapidaries of Bordeaux cut them like precious stones, and they are known in commerce as Medo diamonds.

Entire sets of these diamonds are shown, and produce a fine effect. If you were to tell the lady of one of these manors, so good, so gracious, and so nobly hospitable, that all her gems are only pebbles after all, she would answer proudly that she prefers her necklace of pebbles to the rarest diamonds of Golconda, because these stones, so modest in their appearance come from a soil which has made her rich and happy. Who among our readers does not approve of this gratitude of the ladies of Medoc? We are satisfied that if they owned one of the great estates of Pauillac, they would be pleased to see these trinkets of Medoc quarts adorning their wives and daughters.

The town is one of the most ancient of the Bordelais. The Romans first named it Pauillacus, and the poet Ausonius repeatedly mentions it in his epistles. Formerly, as at the present day, the gentry spent the pleasant season on the banks of the river, Medon being then covered with forests and rich in game of various kinds. Pauillac was burned by the Normans, and only regained its importance at the period of the English supremacy in the South of France. At that time its trade flourished exceedingly, a circumstance which accounts for the sympathy between the people of the town and the foreigners. Throughout the Middle Ages the city exercised a sort of feudal sovereignty over the vessels which sailed up the river; every such ship was obliged to take a pilot and four sailors from Pauillac, and this privilege was maintained to the time of the revolution. The city formed a species of republic governed by magistrates annually elected, and the soverigaty of the lords of Chateau Lafite was purely nominal. The present town is very well built and is the seat of a thriving trade. The names of its five wine tasters are Messrs. Tastet, Mortier, Oliver, Manadé, Martiny.

Sallying forth from the city, we find ourselves in the banner estate of all Medoc, Chateau Lafite. *Ab Jove principium*, as we say in Latin; and this Jupiter is the property of Mr. Rothschild. On leaving Pauillac, we observe at the foot of the surrounding hills, a chateau of modest air, yet not without a certain distinction. This quiet retreat is the palace of the first of the wines of Medoc.—What is there, after all, in the splendor of the building, compared with the superiority of so renowned a plantation!

Chateau Lafite was once the property of the lords of that name, described as knights and squires (damoiseaux) in the title deeds which run back to the fourteenth century. At that remote epoch the territory of Pauillac was not planted with vines as at the present day; we must go back to the year 1641 to find the earliest traces of the wines of Chateau Lafite; but from the era of the reign of Louis XV the wines begin to find favor, and we meet with them as quoted at the price of 1800 francs a barrel in 1645.

It is asserted that the celebrated Marshal Richelieu, governor of the province of Guienne, having cured himself of a severe derangement of the stomach by the use of the wines of Chateau Lafite, recommended them highly to Louis XV, who was likewise afflicted with dyspepsia. The monarch was cured in his turn and the wines of Lafite acquired a reputation which they have ever since maintained. Mr. Segur, then the proprietor, was honored with the title of Prince of vines! which was worn by all his successors.

In 1791, the Chateau and the lands were bought by Mr. de Vandemére, a wealthy Hollander, for one million two hundred thousand francs. He was succeeded by an English banker, Sir Samuel Scott, who passed for the true proprietor many years, until his death, which took place about two years ago, when the conviction gained ground that he had only lent his name to the family of Duchatel, and that the owner of Chateau Lagrange at St. Julien was also the Prince of wines at Pauillac.

Since then the estate has been twice exposed to sale, and was finally struck off to Mr. de Rothschild, who paid nearly four millions of francs, including incidental expenses. This makes Mr. de Rothschild lord of the two greatest estates of Pauillac, Lafite and Mouton. None but a prince of finance, an arch-millionair, could make such an acquisition.

As a plantation, Chateau Lafite is remarkable for its endurance and the frequency of its good crops; it is believed to be without doubt the most striking instance of the quantity of products which a vineyard farm can yield to its owner.—Its extent does not exceed 70 hectares The remark has been made to us by a number of dealers that, judging by the quantity harvested and the price paid in the trade, in the years 1864, 1866, and 1868, the estate must have produced at least a million of revenue. This figure was undoubtedly exceeded by the vintage of 1869. Mr. de Rothschild will have made an excellent thing of it, on his investment of the four millions.

The aroma of the Chateau Lafite is most exquisite; critics say that its flavor recals at once the taste of the almond and the oder of the violet, while it is impossible to say which of these essences predominates.

Hardly less valuable than the world renowned manor just described, is Brane Mouton, also the property of Mr. de Rothschild. This splendid estate adjoins Lafite, and, though ranked by the sworn appraisers as of the second class only, is regarded by public opinion as well worthy of being admitted to the front rank in point of the excellence of its products.

> Mouton, the great Mouton, encircled with renown,
> Should bear the thyrsus staff, and don the mystic crown;
> To its unkingly name, if fairly won, we bring.
> Such homage as would rouse the envy of a king.

So sings the bard of Medoc, a true spokesman of public opinion.

The bouquet of this brand is very delicate, but of short duration; the flavor recalls that of the hazelnut. The grape is called the black *Sauvignon*, and produces a delicious wine.

We overheard a conversation between some women on the woman's rights question the other day. One of them said "she had rather be her husband's pet, and remain as she was, than to become his rival by adopting his habits."—Sensible!

MAPLE LEAVES.

A DOMESTIC MAGAZINE OF USEFUL INFORMATION AND AMUSEMENT.

BOUND VOLUMES FARMER

☞ Volumes of the "California Farmer" for The last EIGHT YEARS, uniformly bound, can be had at the Farmer Office at $3 per Volume.

These Eight Volumes contain more useful matter touching the practical workings of Agriculture as adapted to California Culture than any Book or Books Extant, as they comprise hundreds of Experiments, Letters and Essays upon the Culture of Cotton, Rice, Coffee and Tobacco; Grapes, Strawberries, and all other Fruits, with the Culture of Hops, Castor Beans, Flax, Hemp, &c. and the Whole series of Essays of L. Prevost on Silk Culture, from early beginning.

This set of Volumes would be a Library of itself and is valuable to the Cultivator of the Soil.

Orders sent to Farmer Office will be promptly attended to

VALUABLE PLANTS FOR SALE.

☞ Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and to so cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, to gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us. WARREN & CO.,

Advertising Abroad!

WE CALL THE SPECIAL ATTENTION OF ALL Manufacturers, Agricultural Men, Nurserymen, Booksellers, and others having interests connected with the PACIFIC COAST, that now is the time to secure the business of this region by wisely ADVERTISING WITH US.

The full effects of the completion of that Grandest of all HUMAN ENTERPRISES, the PACIFIC RAILROAD, must open a large and wonderfully increased business between the Eastern States and the Pacific Coast, and they who wisely ADVERTISE NOW, will be the FIRST TO SECURE IT, and when once secured, they can HOLD ON TO IT.

We therefore invite all those who have valuable IMPLEMENTS, MANUFACTURES, INVENTIONS, BOOKS, PAINTINGS, etc. to the Columns of the CALIFORNIA FARMER, that will give them a wider circulation than any other medium they can adopt

WARREN & CO., Eds. and Prop's.

ITALIAN CHESTNUTS.

WE have received an Invoice of Italian Chestnuts in Very Superior order fresh and in the best condition for planting

We have them put up in Packages of ONE DOLLAR EACH, MAILED free to purchasers.

WARREN & Co., FARMER OFFICE,
320 Clay Street

GOLDEN EAGLE HOTEL,

Corner Seventh and K streets,
SACRAMENTO.

THIS HOTEL IS OFFERED TO THE PUBLIC AS a "Home for Families" and for the Traveler.

The Proprietor has spared neither expense or care to make his Hotel one that shall always be acceptable and pleasant to all that may favor him with a call.

With ample accommodations by means of spacious Suites of Rooms for Families, and by recent enlarged accommodations, he is confident that visitors will always be satisfied and feel at Home.

Particular attention will always be paid to the comfortableness of the apartments, by well ventilated Rooms, clean Beds and Bedding, and strict attention to the wants of Boarders; while the TABLES will be provided with the very best the season affords.

The Hotel has been greatly enlarged during the past year, to more than double its former size, with splendid suites of Rooms, and is entirely refurnished in the best style.

CARRIAGES, to and from the Hotel to the Railroad Cars and Steamers, at all times, Free of Charge to the Patrons of the Hotel. Hotel open all night.

D. E. CALLAHAN,
33-1 PROPRIETOR

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING MARCH, 31., 1870.

THE CALIFORNIA FARMER READING ROOM, AND MUSEUM OF NATURAL HISTORY.

220 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING:

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion, twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SAMPLE COPIES.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination, hoping our paper will meet their approval and induce them to subscribe, and to ask their neighbors to subscribe also.

Send for Sample Papers and get up a club. Address

PUBLISHER CALIFORNIA FARMER,
San Francisco, Cal.

Editor's Chair,

We commend to our readers a most interesting letter from our valued New York Correspondent. The delicate and truthful Obituary notices in that letter will be a value to those who have been thus deeply bereaved.

The notice of old Californians in New York and reminiscences of Benecia and happy hours, will interest many friends of our esteemed correspondent, whose letters are read by thousands.

The letter of our Pennsylvania Correspondent contains many excellent points..

O. K. must be wide awake, for he will be called to a strict account for all his opinions, but he must not falter in a good cause.

Acknowledgements

BOOKS RECEIVED.

"Silk and Tea Culture."—We have received a New Book upon the "Culture of Silk and Tea," by T. A. Kendo, who is now interested in these, enterprises.

This little book, costing but *one dollar*, contains many instructions which will be found of value to the new beginner. A. Roman and Co., Publishers.

We are pleased to see a kind notice of our late lamented friend, Pearce, who was the Pioneer of the Silk Enterprise, to whom due credit should always be given.

TROUT CULTURE.

Here, also, we have a New Book, and one that will be of value to many in our State, as we know many persons who are now engaged, and many more who are designing to engage in Fish Culture, especially that pet of the epicure—the Trout.

This book is just issued by Seth Green, Esq. well known to fame as a leader in Pisciculture.

The book is fully illustrated, and a capital book. Published at Caledonia, N. Y.

LIVING OFFICERS OF THE NAVY.

We have received a very handsome Volume with the title, "Records of Living Officers of the U. S. Navy." It also contains the Records of the "Marine Corps," with a History of the Naval Operations of 1861-5, and a List of the Ships and Officers engaged in all the great battles. The Work is carefully compiled from official sources, by Lewis R. Hammersly, late Lieutenant in the U. S. Marine Corps. The book is, and must be, highly interesting as an historical work for reference. It is published by the well-known house of J. B. Lippincott and Co., Philadelphia. Every library should have one.

MAGAZINES.

We have the Magazines of Messrs. Harper Bros.—the *Monthly*, *Weekly*, and *Bazar*. However much praise has been heretofore bestowed upon these most excellent and world-wide publications, too much praise cannot be accorded to them. They grow better and better, although it would seem they had already attained the highest standard; and however much may be said of other Magazines—of our own most excellent *Overland Monthly*, and the *Atlantic Monthly*, and many others—no family that is able to have Harper's works should be without them.

THE "NATURALIST."

The *American Naturalist* is a valuable and popular Monthly, now steadily wending its way onward and upward in the scale of public favor. This Magazine is published by the Peabody Academy of Science, and is worthy of a place in libraries everywhere.

AGRICULTURIST,
AND JUCUNDA

For Sale at the "FARMER" OFFICE.

THE SEASONS.

"We could not have the rain come any better if we had specially ordered it ourselves."

This is the language of many we meet in various sections of the country. These words, however, do not come from the crockers and the unthankful, but they come from the wise, thoughtful, considerate and grateful cultivators of the soil, who duly appreciate the blessings which we in this State enjoy over almost every other section of our country.

No close observer of the laws of nature, but what must see and know that we shall have rains and dews just as steadily, and always when the earth needs them most.

We have had a variable March, considerable cold winds, and several severe frosts, but very little injury has been sustained over our State.

The fruit trees are now putting on their radiant robes of blossoms, Cherries, Peaches, Nectarins, and Apricots show a good blooming; Pears also have a very fine set for fruit, and Apple trees show a strong array of fruit buds. There is every reason to look for a good crop of fruit.

Strawberries show fruit and are coming to market; all kinds look well; other small fruits give indication of a vigorous growth and a good fruiting season.

Fig trees are putting forth leaves and fruit, and give a goodly promise of this delicious fruit.

The Grain fields, where they have been wisely attended to, never looked better or gave a better showing. Grass is backward, but we shall have a good haying season.

The repeated rains in March give us good assurance that we shall have repeated rains in April, and also showers in May.

Our Farmers should keep their plows going; better plow land a dozen times than do nothing, and land repeatedly plowed and left in fallow is equal to a good manuring.

The season can be said in all its features to be a most prosperous one, and a good promise for all the interests of our State; and for these great blessings let us all bless God and be thankful.

STATE GRANTS—LEGISLATIVE AWARDS.

By recent enactments our Legislature has granted awards to the UNIVERSITY OF CALIFORNIA, $50,000, so that now the wheels will move on, we trust, rapidly and smoothly, the long delay has been a great injury, when so many students have been knocking at the door of the College for admission.

The Legislature has also granted $5,000 to the State Agricultural Society for two years, and $1,500 to the several district societies. This is well, if these several Agricultural Institutions will but devote these means to the *Cause of Agriculture* and not to *Horse Racing*, it will be well for our Farmer of the State.

WHO WINS THE PREMIUM?

NEWS FROM "DOWN EAST."

News comes to us from the British Consul at Portland, Me., that the British Government with its accustomed liberality towards discoveries, has offered the SPLENDID PREMIUM of TWENTY-FIVE THOUSAND DOLLARS to whoever will invent a machine or discover a process by which the materials of the China Grass can be seperated for use, i. e. the outside fibres from the stem, and the finest fibres from the coarser or bark.

Here is a chance for an inventive mind. Now who will win this SPLENDID PREMIUM—What says our Californians, will not this State bear off the Banner?

SPLENDID WOOL CLIP.

The clip of one of our well known sheep raisers, Thomas McConnell, Esq., whose Ranch is at Elk Grove, near the Cosumnes River, gives in his report of his fleeces to following:

From 30 full blood Spanish Merinos, one years growth, 476lb. the smallest fleece 11lb, the largest 21½lb, being nearly 16lb each.

It should be understood that twenty-one of the above 30 were ewes and also dropped lambs.

Mr. McConnell has a fine band of sheep, which have been exhibited several years at our State Fairs, where he has taken many premiums.

His entire flock numbers about 4,000, all fine grades or full bloods, no common sheep.

POTATOE PLANTING.

Now that the late frosts have gone, there never was a better time to plant Potatoes, let the soil be plowed deep and fine, and a sure crop awaits the planter.

The "Early Rose," planted in January have already been matured, we have seen good size "Early Rose," that was planted as late as Jan. 12th, and there can be no doubt but that the "Early Rose" planted now, will make two crops the present season—and two good crops—there is no Potatoe grown so sure as the "Early Rose."

CATALOGUES

We have received the several Catalogues (four) of Messrs. Ellwanger and Barry, of Rochester, N. Y., who rank among the most extensive Nurserymen in the United States, and whose grounds cover several hundreds of acres These Catalogues embrace all the departments of their business, and are valuable. We call attention to their advertisement in our columns. Their Establishment is worthy of the highest confidence; it is a house that can be relied upon.

SPECIAL NOTICES.

We call the attention of our Harvesters to the advertisements of Messrs. Treadwell and Co., for the New and Valuable Machinery offered by them.

Also, to Messrs. Marcus C. Hawley and Co, who advertise Superior Machines and Valuable New Agricultural Implements.

Also the advertisement of Messrs Arthur and Son, for their famous Wagons, and other goods offered by them.

Our Farmers should make their purchases *early*, and thus they can select the Best.

MANURING GRAPE-VINES.

At this season there is a large amount of grape-brush, the pruning of the Vineyards, which many cultivators of the grape are in the habit of carting off to the roadside and burning up, to get rid of the same.

We now urge them to make a better use of them, and one that will greatly benefit their Vineyards; and we can refer them to several of our best cultivators, who have greatly benefitted their Vines by this practice.

As the Vine is a great feeder, the wood of the Vine contains the richer substance of the soil—a large portion of the nutritive properties of the soil being required to feed the Vine in order to make the wood of it. The trimmings of the Vine cut off in pruning, contain this fertilizing material, and it will be found that, by cutting them up finely and placing them in heaps near the Vineyard, and covering them with gypsum, in a little while a fermentation begins, when, by spreading this compost over the soil, between the rows of Vines, it makes one of the best of fertilizers that can be used in a Vineyard; this substance should be plowed in finely.

These prunings, as they decompose, restore to the soil the very substance of their own composition. The gypsum with these contains sulphuric acid, so necessary for the Vine, while the nature of the gypsum is to retain the moisture, and to fix and retain the ammonia also in the soil. Gypsum is a valuable aid as a fertilizer in the Vineyard and Orchard; the sulphuric acid contained in it acts as a check to the mildew on the grape, and, at the same time, invigorates the growth of the fruit-bearing cane. Gypsum, when strewn over the foliage of pear trees, when infested with the slug, quickly extirpates them.

The time to use the gypsum upon fruit trees is in the early morning, when the leaves are moist; thrown on by the hand, it sticks to the leaves; what falls upon the ground is beneficial also. The quantity required in Vineyard or Orchard is half a ton per acre; some use a ton, with great advantage.

Vineyardists that throw away their cuttings make a great mistake; those that have used them have found great and good results.

GOLD vs. GREENBACKS.

Steadily but surely Gold will *fall* and Greenbacks *rise*, until it will be perfectly easy for our business men to say, "resumption has taken place."

"It will do so itself," as the little fellow said of the broken sugar-bowl. Resumption *must* take place, as the natural result of a restored confidence in the increased value and stability of our national finances, the rapid growth of all our industries, and the certainty of prosperity and peace. These are the influences that must bring the day of general resumption speedily.

Such is the confidence abroad in our Government, and the certainty of its great financial resources, that our Bonds are now nearly at par with Gold; and it would only require a little effort on the part of our merchants and business men now, to bring about so desirable a result.

If merchants desire to see a great improvement in business, and wish to hail the day of great prosperity,—let them unite and establish the era of specie payments. Resumption means prosperity.

SAN DIEGO EXCITEMENT.

The fever heat of the late gold excitement at San Diego has left many of those who once felt its burning influence. The thirst for gold creates a terrible fever, which, too often, costs the life of its pursuer. The late furore has passed, and most fortunately, too, for our community; enough victims have already been drawn from their legitimate business. If it had taken a few thousands of the idle ones and those whom we could easily spare, it would have been a benefit. Unfortunately for our city, this class of men have no means to get away; and if the *New* Immigration Society would only have pity on them, and give them means to go and prospect, and *not come back*, they would do a good thing.

There is no doubt but there are some good mining leads in the new region, but *our* opinion, often expressed, has been, that real estate and mercantile business—sales of land, furnishing outfits of stores, etc., had a greater influence in getting up the excitement than any gold discoveries yet made.

SILK CULTURE IN NEVADA COUNTY.

The *Transcript* of March 20th says: We stated yesterday that Muller and Carr had a mulberry plantation of five thousand trees. Board will have, when his spring planting is accomplished, about eight thousand trees set out; and we are also informed that Mrs. Diamond, of Allison Ranch, proposes to try the experiment of silk culture in that locality. A number of smaller plantations are being planted, and it is probable that the number of trees in the county will be increased in the aggregate by nearly fifty thousand, by the end of planting time. The successes of Muller, and others who have tried to raise cocoons, have demonstrated what may be done, and the industry is destined to have a rapid growth in the future.

THE UNEMPLOYED.

We, in Kern County, are poor, but we can take one thousand of those poor men starving in San Francisco, give them food and shelter, give them steady employment, give them a moral certainty of securing a competence, give them a homestead, and give them the power, in one year, of doing to others as we are willing to do by them, if they will come and take hold with us and do all they can, and be satisfied with what they can earn.—Come, then—leave the big city and its vices and follies, and share with us our pork and beans, and be independent American citizens. Come! You can't vote but once, but you can work early and often.—Kern County *Courier*.

THE CHINESE.

Much has been said and written for and against the Chinese as a fit class of people to have among us. The same and similar objections have been made against the colored race, and both were slaves. Neither of whom as a race have ever had the opportunity of education or improvement, and because they are ignorant or degraded and vicious, there is found in our midst a large or considerable portion of our people who would place a *Ban* upon them and deprive them of protection or citizenship, or even allow them to be employed or remain with us.

It would be well for all who are thus opposed to the colored race and to the Chinese to remember, that by the LAWS of our country, and by the TREATIES made with China and other nations, whose people are in our midst, that the *whole* power of our Government, its Army and Navy, are bound in DUTY and HONOR to shield all who come to this country and throw themselves under the *Shield* and *Guardianship* of the American eagle, that guides the waving folds of our Beautiful Flag the STARS and STRIPES.

We would be fully understood in this matter, and while we would boldly advocate shelter and protection to all who come to this "LAND OF FREEDOM," we also claim that *Self Protection*, being the "First law of Nature," so it should be the *First Laws of Nations*. And, therefore, we as American citizens, should demand *obedience to our laws* of *every name and kind*—and no people of any other nation, coming here to enjoy our country and looking to our laws for *protection*, should ever be permitted to violate the very least of them.

The very greatest danger to our Government is its too great liberty allowed to those of foreign birth and education, especially to the lower classes, the ignorant and consequently depraved.

The Chinese, accustomed to cluster in masses, and live in miserable hovels, breeding filth, disease and crime, should be made to know this could not be *tolerated here*. Their obstructions of our streets, their idleness, and their open prostitution, common to them, should not be tolerated here. It is the *first duty* of our City, State, and National government to make them fully acquainted with our *Laws*, and then compel, if necessary, their obedience to them.

The Chinese as a class are *imitative*, greatly so, they are *industrious*, faithful, when employed, easy to learn, sober and honest, and if our law makers and law executors would only be faithful, the Chinese would never trouble us. They should not be allowed to congregate in our city to the detriment of health, these sinks of iniquity should be legally removed and measures taken to guard the health and morals of our country from danger from all nations.

The Chinese are ignorant of our laws and customs and they should not be blamed for a breach of our laws, when they have not been informed what they are.

The many thousands now employed on our Public roads, in our manufactories and workshops, and in families, are an evidence of their readiness to do right. They never rise in rebellion against our government, or attempt to usurp its offices or control the action of its laws, but will always be found ready and willing to *obey* when once *instructed* in their duty.

The same rule of action of our government in order to bring the Chinese to observe the "Laws of Health," "Good order," "Peace," "Industry," and "Morality," should be applied faithfully to all without exception. All nations and people should obey that government and those laws to which they look for protection.

The course pursued at San Jose, in settling the Chinese by themselves, would be a wise act on the part of the government of every city, until they can live and act up to the full standard of our customs.

The imitative genius of the Chinese is fully shown in their doings of San Jose, which we here annex from the San Jose *Mercury*.

The Chinamen, in their new location on Vine street, have probably about sixty tenements erected, and more are being put up as fast as Celestial muscle and skill can rear them. Their quarters are laid out into small streets, and great activity is displayed in building. No white carpenters are at present employed. The Asiatics seem to use the square, saw, plane, and hammer with skill. Immediately after removing to their present quarters, they employed a "Caucasian" carpenter at four dollars a day, who thought he had a "good thing" for the winter, supposing, of course, that he would build all of their tenements. But while engaged in constructing the first one, he observed the Celestials noticing everything he did very closely, sitting on their haunches in a circle around him, and apparently deeply interested. When he had finished the cabin, the "boss" Chinaman came up to him and said, "Welly good; you go now; savee now all'e same Melican man. Chinaman carpenter workee one dollar, Melican man four dollar one day; welly good." The proud Caucasian had, of course, to pick up his tools and travel, as his employers had discharged him; but he had a lingering hope that they had not learned the carpenter's trade in their brief study of it, and that his services would again be called into requisition. But he was doomed to disappointment. Imagine his astonishment, on returning to note what progress they were making, to find that they had constructed several cabins, each of which was an exact copy of the model he had furnished them. They had learned all about the trade. That carpenter formed the opinion that Mongolian patronage could not be depended on.

OTHER CATALOGUES.

We have upon our table some *Fifty Catalogues*, from all parts of the Country, of parties desiring us to notice them and their business. We should be happy to do so, legitimately, through our ADVERTISING COLUMNS; there we can *do them good*.

Every Farmer should read Horace Greeley's Essays.

THE TOBACCO EVIL.

A young lady writes very forcibly to us on the subject. She feels evidently that the practice should be handled without gloves:

"I read upon your pages the essay of Mrs. Stowe, entitled 'More about Babies;' I think it very good, and would have all who use tobacco read it, and consider what they are doing, and where the sin of hereditary habits lies. How can a child help learning to do what it is forced every day to *see* and *smell*, unless God has given it a marked hatred for such things. We form societies against the sale of liquor, and why should we not against the 'filthy mouth' practice, and shun them? Tobacco intoxicates as well as liquor, yet women seem scarcely to think of what they are doing when they marry men who may be said to be 'tobacco mad.'

"You commented on the piece by saying 'Reader, this is a good theme for a sermon. Why not ask your clergyman to prepare a discourse on the necessity of bodily health as well as of spiritual purity? If every clergyman in the land would open his mental battery on the cause of tobacco, he would hit many sinners at every shot;' I would add, and even himself; for nine-tenths of our ministers practice this 'acquired sin' after they have been called to preach against 'original sin.' I don't believe Paul ever used tobacco, for his epistles are full of denunciations of uncleanliness. Our Saviour said, 'Go preach the gospel,' not go to the study and consume a paper of tobacco while writing one sermon, as I have known some ministers do. What a discourse that must be which is filled with the spirit of tobacco! for if one did not have his tobacco he could hardly get any 'vim' into it; his agitated nerves would not let him think clearly and forcibly.

"I think if the clergy would forsake the practice, and preach against it, their people would bear and forsake. But let all who smoke or chew count the cost to them in health and pocket. The money expended by some individuals in this way would, in the course of a few years, buy a respectable library, and give them a better education than they now have. Clergy and laymen, what think ye?"—"METTA," in *Phrenological Journal*.

[The above but faintly shows this growing evil in the whole land. It is the deadly Upas that will overshadow the land unless a check can be given to the habit.

In California, it is impossible for a person to whom it is offensive—to go anywhere without being a sufferer. In the street, tobacco-reek is blown into your face at almost every step in advance. A person cannot enter a car or an eating-house without being a sufferer. To the Wells Fargo and Co.'s office, or the Post Office, at mail hours, a person must expect to suffer. The Post Office passage-ways, steps and yard, will often be too indecent to herd choice blooded cattle; it is fairly nauseous. Better the new white marble pave had never been put down without it be kept fit to pass over; but our streets and corners are often in the same condition.

"Metta" has well said our preachers must lead the way of reform; "Metta" might have also said the medical men, and our school teachers. Any person watching the young pupils coming from school would almost suppose they went there to learn to smoke; that lesson they learn perfectly. More hereafter.—ED. F.]

WHEAT "STARVED TO DEATH"

L. L. Fairchild in the *Prairie Farmer*, says that when attending the Wisconsin State Fair, at Madison, I was riding to the fair ground with several farmers from different parts of the State. They were lamenting their light crops of wheat and its poor quality. They said, they did not see why, of late years, their crops should be so poor, and the grade number two, or rejected, when a few years since they got twenty to thirty bushels to the acre, and it weighed plump sixty pounds to the bushel. Somehow the season was unfavorable. A gentleman who proved to be a wheat buyer spoke up. "I can tell you what the matter is. You starve your wheat to death! You don't feed your land. Your previous crops have taken up all the wheat nourishing elements in the soil. You would not expect an ox or a hog to grow unless you furnished them something to live on. Neither will your wheat. Feed the soil and it will feed you. Do not burn your straw, return your manure, take everything off and put it back. Put your land in better condition, by seeding in clover, making and using more manure and other fertilizers, and you will get more and better wheat off from less land." Such was the substance of the wheat buyer's remarks, and I think he was right. However unwilling our farmers may be to admit it, there can be no question that our soil is becoming exhausted of its wheat growing elements. Less acres to wheat, more stock and more of a mixed husbandry will be the order in the West. The sooner heeded, the sooner prosperity will again smile at our doors.

Save and apply the fertilizers! Let us have to waste that will make a stock of corn and wheat thrive the better for its application.

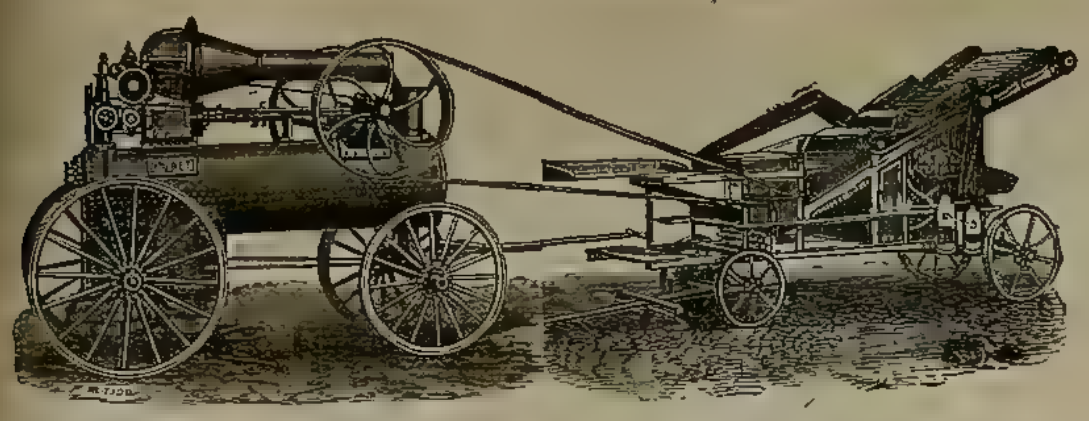
[Our Farmers will recognize in the above excellent counsel the very doctrine, THE FARMER has been using for several years. There can be no doubt in this matter; we know many farms that formerly gave 30—40 and even 50 bushels to the acre, that only give 15—20 now.

Will our Farmers be advised?—ED. FARMER.

RARE FLOWER SEEDS.

We have several fine collections of choice Flower Seeds from the well known "Dreer" of Philadelphia, and James [illegible] Rochester N. Y. Those who wish "Choice Flora," will find them at our Office, No. 220 Clay Street.

"HOADLEY" "RUSSELL!"



HOADLEY'S IMPROVED THRESHING ENGINES!!

RUSSELL'S IMPROVED SEPARATORS!!

CONSTITUTING PERFECTION IN THRESHING GRAIN!!!

THESE MACHINES are now so completely constructed as to render them the very "NE PLUS ULTRA" of ENGINES and SEPARATORS for the Farming community of California.

THE ATTENTION of the FARMING community and the public generally is called to the GREAT IMPROVEMENTS on the above make of Engines and Separators, which are surpassed by none for threshing grain, and are specially adapted to the use of Farmers.

Improvements on Russell's Separator.

THE SEPARATOR has been increased six inches in width, the sieves being much enlarged, to correspond; the 33 inch Cylinder now having a 40 inch Sieve, being six inches larger than the old style; and the 36 inch Cylinder Sieve has been increased six inches, and is now 48 inches, which greatly enhances the capacity of the Machines.

HAINES' HEADERS

With Doane's Adjustable Reel.

IN OFFERING these SUPERIOR HEADERS to the Farming Community of California, we can safely say that we have now brought the HEADING MACHINE to as near perfection as is possible.

THE MOST USEFUL MPROVEMENT YET MADE!

WHICH is a simple arrangement for Raising and Lowering the Reel some 18 inches, so as to enable the REEL to reach lodged grain, different lengths of stalks, and to be used in windy weather without stopping the Machine, and the consequent loss of time and labor in adjusting the old style Stationary Reel, which took some FIFTEEN MINUTES. The belts are always of the right length, and you can adjust the Reel to any grain with the greatest ease,

AND WITHOUT LOSING A MINUTE'S TIME!

THE GREAT point in our New Headers will command itself to all purchasers, and no other Headers will be used when the great merits of this improvement are known.

CAUTION.

ALL PERSONS are Cautioned not to infringe upon our Patent Adjustable Reel Headers, as they will be prosecuted.

FOR SALE BY OWNER OF PATENT AND MANUFACTURER.

WOODS Improved Prize Mower—Folding Bar: As now made, this is the best and Cheapest MOWER used on the Pacific Coast.

Home Miscellany.

BEAUTIFUL CHILD.

BY MAJOR WM. A. H. SIGOURNEY.

Beautiful child by thy mother's knee,
In the mystic future what wilt thou be?
A demon of sin, or an angel sublime—
A poison Upas, or innocent Thyme—
A spirit of evil, flashing down
With the lurid light of a fiery crown—
Or gliding up with a shining track,
Like the morning-star, that ne'er looks back.
Daintiest dreamer that ever smiled,
Which wilt thou be, my beautiful child?

Beautiful child in my garden bowers,
Friend of the butterflies, birds, and flowers,
Pure as the sparkling, crystalline stream,
Jewels of truth in thy fairy eyes beam,
Was there ever a whiter soul than thine
Worshiped by Love in a mortal shrine?
My heart thou hast gladdened for two sweet years
With rainbows of Hope through mists of tears—
Mists beyond which thy sunny smile
With its halo of glory beams all the while.

Beautiful child, to thy look is given
A gleam secret, not of earth, but of heaven.
With thy tell-tale eyes and prattling tongue,
Would thou couldst ever thus be young.
Like the liquid strain of the mocking-bird,
From stair to hall thy voice is heard.
How oft in the garden nooks thou'rt found
With flowers thy curly head around!
And, kneeling beside me with figure so quaint,
Oh! who would not dote on my infant saint?

Beautiful child, what thy fate shall be
Perchance is wisely hidden from me.
A fallen star thou mayst leave my side,
And of sorrow and shame become the bride—
Shivering, quivering through the cold street,
With a cause behind and before thy feet—
Ashamed to live, and afraid to die;
No home, no friend, and a pitiless sky.
Merciful Father, my brain grows wild,
Oh, keep from evil my beautiful child!

Beautiful child, mayst thou soar above,
A warbling cherub of joy and love,
A drop on Eternity's mighty sea,
A blossom on Life's immortal tree—
Floating, flowering evermore
In the blessed light of the golden shore;
And as I gaze on thy sinless bloom
And thy radiant face, they dispel my gloom—
I feel He will keep thee undefiled,
And His love protect my beautiful child.

LOST DAYS.

The lost days of my life until to-day,
What were they, could I see them on the street
Lie as they fell? Would they be ears of wheat
Sown once for food but trodden into clay?
Or golden coins squandered and still to pay?
Or drops of blood dabbling the guilty feet?
Or such spilt water as in dreams must cheat
The throats of men in hell, who thirst alway?
I do not see them here; but after death
God knows I know the face I shall see,
Each one a murdered self, with low last breath.
"I am thyself—what hast thou done to me?"
"And I—and I—thyself" (lo! each one saith,)
"And thou thyself to all eternity!"

FASHIONABLE WOMEN.

Fashion kills more women than toil and sorrow. Obedience to fashion is a greater transgression to the laws of woman's nature, a greater injury to her physical and mental constitution, than the hardships of poverty and neglect. The slave woman at her task will live and grow old, and see two or three generations of her mistresses fade and pass away. The washerwoman, with scarce a ray of hope to cheer her in her toils, will live to see her fashionable sisters all extinct. The kitchen-maid is hearty and strong, when her lady has to be nursed like a sick baby. It is a sad truth, that fashion-pampered women are almost worthless for all the good ends of life; they have but little force of character, they have still less power of moral will, and quite as little physical energy. They live for no purpose in life—they accomplish no great ends. They are dolls in the hands of milliners and servants, to be dressed to order. If they bear children, servants and nurses do all, save conceive and give them birth. And when reared, what are they? what do they ever amount to but weak scions of the old stock? Who ever heard of a fashionable woman's child exhibiting any virtue, any power of mind for which it became eminent? Read the biographies of our great and good men and women. No one of them had a fashionable mother. They nearly all sprang from women who had as little to do with fashion as with the changing of the clouds.

Some rash fellows say that the giving of the ballot to women would not amount to much; for none of them would admit that they were old enough to vote until they were too old to take any interest in politics!

EVEN WITH US.

Two little girls were walking homeward one moonlight evening. I overheard one of them say, "Sister Annie, it don't make any difference how fast we walk, the moon keeps up with us every step of the way; it don't move at all, and yet it is always going along with us." So it is with the dear God in Heaven; though He seems far away, He is keeping step with us always in the march of life.

STEP BY STEP;

OR THE TRUE STORY OF A GREAT SINGER.

An instance of the revolution which the possession of a fine voice will effect upon the poorest fortunes is given in the career of Mdme. Pauline Lucca. Like Mdlle. Nilsson, the Baroness von Rahden owes her prosperity to exceptional natural abilities discovered among humble surroundings. Her youth was past in poverty. The necessities of her family drove the little child to eke out subsistence by dancing in Vienna Hoftheatre ballet, where she received more rebuffs than praises—rebuffs amounting often to positive cruelty. In 1850 the child of eight was scolded and threatened by the ballet master; even her parents' religion (they were Jews) being added to the scoffs of which the German language is so susceptible.—Little Pauline was stupid, or willful, and was ultimately rejected as useless for a dancer. In this extremity a relative who possessed some means offered to have her educated for a governess.—She was sent to school, where she fared ill, according to her own account, published in a foreign paper from which we take some few particulars of her life. The story of her school life is contained in a letter to a friend. She says:—

"When I first entered the school I was scarcely nine years old. Some years before, as the child of a well-to-do merchant, I had attended school, but now learned the difference between such a position and my present standing. It was a long time before I could drill my childish heart to endure in silence all the humiliations to which I was subjected. But a triumph lay in store for me.—As the time for the examination drew near, teachers and scholars were in continual excitement.—I, alone, beheld the preparations with indifference, because certain I would be considered too insignificant to be questioned. Every day, from twelve to one o'clock, we were practised in singing; not in the form of regular musical instruction, but simply required to follow the air played on a violin, and drilled like so many canary birds. I was never allowed to sing, but served the teacher as a music stand, holding his notes for him. Everything was finally prepared, and the august day arrived. I remember how awed we were by the appearance of the principal in a new cap of extraordinary construction. We were required to dress alike, and trouble enough my poor mother had to meet the expense of my outfit. The guests were assembled; the girls were ranged on benches—I in a corner behind the other—and the terrible man, the examiner, proceeded to business. A solitary question was put to me just as I had arranged myself more comfortably to overlook the room. Of course, as I had not the least idea of the proper question, I replied at random, and sat down again amid the scornful laughter of my fellow scholars and the frowns of my teachers. The examiner alone seemed intensely amused, as if he considered the reply appropriate. I was again aroused by the rising of the whole school preparatory to singing. I looked up and saw my mother directly before me, the tears rolling down her face, and looking reproachfully at me. For the first time I was really mortified, and the thought flashed through my mind; 'How can I make up for that stupidity?' I had been forbidden even the privilege of holding the notes at my examination, but with the assurance of fate, my heart urged me to go forward with the rest to sing.

Quick as thought I advanced, heedless of the curious looks of the teachers. After the others had, parrot like, gone over the songs required, the examiner, whom I had earnestly, wistfully stared at during the singing, turned suddenly to me, with the question; 'Now what can you sing?'—'Och! everything the others have sung—every thing,' answered I, sturdily.

'So, so! then sing this'—

It was a little air which I disliked; I turned up my pug nose, but sang it; then instantly asked permission to sing the *Ave Maria*, which, being the most difficult, had been omitted by the others. Permission was granted, and seizing the notes with the eagerness of one determined at one stroke to make amends for the past, I sang that simple but inexpressibly touching composition; (even now when I sing it the tears spring to my eyes.) How did I sing? I do not know—only this I remember, that as I ended I found myself caught in the arms of the examiner, who, between tears and kisses, exclaimed, 'Child, thou hast sung like an angel!' I turned to my schoolmates to meet only sour, envious faces—but one little girl ran up to embrace and congratulate me. My mother was in a flutter of delight, and could not sufficiently express her wonder."

From the day when Pauline proved at school the possession of, at all events, one talent in an admirable degree, her vocation was decided.—She was at once made a member of the chorus connected with the Kernthner Theatre, and half a dozen years later she made her first impression upon the public. She was seventeen, when in October, 1857, she sang the *role* of the first bridesmaid in *Der Freishutz*. We are indebted to her again for a description of this important evening. The theatre was crowded to excess, and away upon "Olympus" sat a little, dried-up, weather-beaten Jew, anxiously waiting for the moments of his child's success, for she had assured him she meant to create such a *furore* as to incite the manager to engage her for the rendition of the second best parts. She has not greatly altered since that time in personal appearance—is now, as then, a plump, graceful little figure, with large, brilliant blue-gray eyes, shadowed by long black lashes, and arched by boldly defined brows. She entered leading the bridal chorus, and kneeling before Agathe, began the well known melody in such a joyous, dashing, lark-like fashion, that the audience broke out in tumultuous applause. Such a rendition they had never before heard, and the little leader was called to the front of the stage to repeat the song. When the curtain finally fell, and the little old man waited impatiently at the door of the chorus greenroom, Pauline flew out with the delightful news that she was engaged at six hundred gilders yearly to sing the lesser solo parts. It was, however, necessary that the orchestral conductor, Eckert, should first test her voice. This he did the following day, and pronounced the astonishing judgement that she possessed neither voice nor talent, and must remain in the chorus. Pauline has never lacked spirit, so she stamped her little foot in a rage crying out that she had both voice and talent, and would show him sometime what he had lost; furthermore, she would never sing in the chorus again—and never again in Vienna. She persuaded her father to leave Vienna, and six months later we find her prima donna of the theatre of Olmutz. Here, during that winter she studied eighteen new parts, running the gamut of impersonations, from the tragic to the most extravagant soubrette. From Olmutz she went to Prague, where the intendant of the Royal Opera in Berlin discovered her—a happy man when he coaxed the rare bird to remove to that city. Since 1861 she has been attached, under a life-long contract, to the Royal Opera of the Prussian capital. The little Vienna Jewess—Pauline Lucca—has become the Christian Pauline Lucca, since a few years back the wife of the Baron von Rahden.

From the first evening of her appearance on the Berlin stage, she has been adored by the enthusiastic Berlin public. Whether personating Margaret, Selika, Valentine, Leonora, or the many other characters for which she is gifted, she is as successful in her wonderful influence upon her audience. There are greater artists in so far as the brilliant execution of astonishing trills and painfully wonderful staccato measures goes for music, but there are few such singers as Pauline Lucca. It is her peculiar talent to merge all individuality in the rendition of the character she may be performing—it is never Pauline, it is always Margaret, Selika, Valentine we see and hear. She is utterly free from affectation of any sort, and her great success is mainly due to her being always so simple, charmingly natural.

Her house, as that of the Baroness von Rahden, is one of the most popular among the aristocracy of Berlin, although she gives delightful balls, dancing still remains her weakness—she likes it no better than when an eight-year old child. By a strange freak of fate the same operatic conductor who pronounced such severe judgment upon her in Vienna is now occupying the same position in Berlin. For the past year the Baroness has been suffering from a disease of the throat, which has prevented her interpretation of the more important musical *roles*.

INTELLECT IN WOMAN.

Men do not care for brains in women. They like a sympathetic intellect which can follow them and seize their thoughts as quickly as they are uttered, but they do not much care for any clear or special knowledge of facts; and even the most philosophic among them would rather not be set right in a classical quotation, an astronomical calculation, or the exact bearing of a political question by a lovely being in tarlatane whom he was graciously unbending to instruct. Neither do they want anything very strong-minded. To most men, indeed, the feminine strongmindedness that can discuss immoral problems without blushing, and despise religious observances as useful only to weak souls, is a quality as unwomanly as a well developed biceps or a huge fist would be. It is sympathy, not antagonism, it is companionship, not rivalry, still less supremacy, that they like in women; and some women with brains as well as learning—for the two are the same thing—understand this, and keep their blue stockings well covered by their petticoats. Others, enthusiasts for the freedom of thought and intellectual rights, show theirs defiantly, and meet with their reward. Men shrink from them. Even clever men, able to meet them on their own ground, do not feel drawn to them, while all but high class minds are dwarfed and humiliated by their learning and their moral courage. And this is what no man likes to feel in the presence of a woman, and because of her superiority. But the brains most useful to women, and most benefitting their work in life, are those which show themselves in common sense, in good judgment, and that kind of patient courage which enables them to bear small crosses and great trials alike with dignity and good temper. Mere intellectual culture, however valuable it may be in itself, does not reach to the worth of this kind of moral power; for as the true domain of woman is the home, and her way of ordering her domestic life the best test of her faculties, mere intellectual culture does not help in this; and, in fact is often a hindrance rather than a help. What good is there in one's wife being an accomplished mathematician, a sound scholar, a first rate musician, a deeply read theologian, if she cannot keep the accounts square, knows nothing of the management of children, lets herself be cheated by the servants and the trades people, has not her eyes opened to dirt and disorder, and gives way to fretful temper on the smallest provocation? The pretty fool who spends half her time in trying on dresses and studying the effect of colors, and who knows nothing beyond the last new novel and the latest plate of fashion, is not a more disastrous wife than the woman of profound learning whose education has taught her nothing practical. They stand at the opposite ends of the same stick, and neither end gives the true position of woman. Indeed, if one must have a fool in one's house, the pretty one would be the best, as, at the least, pleasant to look at; which is something gained. The intellectual fool, with her head always in books and "questions," and her children dropping off like sheep for want of womanly care, is something more than flesh and blood can tolerate. The pretty fool cannot help herself. If nature was but a step-mother to her, and left out the best part of her wits while taking such especial care of her face, it is no fault of hers; but the intellectual fool is a case of maladministration of powers, for which she alone is responsible; and in this particular alternative between beauty and brains we would go, in for beauty without a shadow of doubt.

NEVER LEAVES OR FORSAKES HIM.

Look at the career of man as he passes through the world—a man visited by misfortune! How often is he left by his fellow-men to sink under the weight of affliction, unheeded and alone! One friend of his own sex forgets him, another abandons him, and a third betrays him; but woman, faithful woman, follows him in his affliction with unshaken affection; braves the changes of feeling, of his temper, embittered by the disappointments of the world,—with the highest of all virtues; in resigned patience ministers to his wants even when her own are hard and pressing; she weeps with him, tear for tear, in his distress, and is the first to catch and reflect a ray of joy, should but one light up his countenance in the midst of his suffering; and she never leaves him in his misery while there remains one act of love, duty, or compassion to be performed. And at last, when life and sorrow come to an end, she follows him to the grave with an ardor of affection which death itself cannot destroy.

ONLY MOTHER.

In a crowded car in New Orleans the other day, the passengers noted a couple who, from their manners, were evidently lovers. "You love me, then?" the gentleman said. "How can I help it!" was the low-voiced reply. "But then I have never seen your face. Day after day we have ridden together in this car, and yet you have never lifted your veil." "It might dispel the illusion." "Oh, no; believe me, it could never do that."—"I'm afraid." "I tell you I love you too passionately for anything to destroy my affection." Just then a breath of wind stirred the folds of a thick green veil and lifted it. "Mercy!" aspirated the youth, recoiling from the sight, "its my mother!"

WOMAN'S "RITES."

A lady in Leavenworth, Kansas, has written to a town in Missouri that she is a "lectorin on the influence and duties of woman," and would like to "lector for the benefit of the church or the Sabbath School, or any individual in that town for $50, or for one-half, at fifty cents a ticket."—She asks her correspondent to "pleas rite and let her no what can be don about it."

BE CONSTANT.

If you have a friend who loves you, who has studied your interest and happiness, be sure to sustain him in adversity. Let him feel that his former kindness is appreciated, and that his love was not thrown away.

NEW

AGRICULTURAL

BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY cuts in those parts needing such illustration; so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

BATH HOUSE,

No 524 TO 528 PACIFIC STREET,

DR. ZEILE INFORMS THE PUBLIC THAT his New Bath House is now open for the accommodation of patrons. Neither pains nor expense has been spared to make this the best and most commodious establishment of the kind, either in Europe or America.

Convenient and separate apartments are afforded for the administration of bathing by Steam, by Hot Air, and by Plain or Medicinal Waters.

Trained and polite attendants will use their best efforts to give complete satisfaction.

DR. ZEILE has also attached to his bathing establishment a few handsomely furnished Suites of Rooms, where he will receive and entertain patients for treatment, who are not affected with any contagious or infectious disease. To secure this accommodation it will be always necessary for engagements to be made in advance of the arrival of the patient.

Open daily from 7 A. M. to 9 P. M. On Sundays from 7 A. M. to 2 P. M.

Miscellany.

AN APOSTROPHE TO A LOST SOUL.

BY S. E. ROCKWELL.

Thou wailing—Thou wailing soul,
For whom the Savior meekly died,
The song and dance and maddening bowl,
The gates of sin thrown open wide,
Have cast thee down with fiends to dwell,
Within the boundaries of hell.

Ah, ruined soul, though thou hast drained
Each cup of pleasure to its lees;
How thou art doomed, and pent, and chained,
Shipwrecked on Bacbanalian seas;
Thou hast thy portion, wailing soul,
Which comes of quaffing at the bowl.

O wretched soul—forever lost,
Sentenced and doomed to endless woe,
On fiery billows fixed and tossed,
While endless cycles come and go;
Tell me, O tell me, moaning soul,
What torments lurked within the bowl.

Tormented soul—let thy sad doom
Warn votaries not to touch the bowl,
Least their last days go down in gloom,
Amid the wailings of the soul.
Thou hast, lost soul, for all thy pains,
The portion which thy God ordains.

The sparkling bowl and ruby glass,
Blind revelry—the giddy dance,
Are murdering millions now, alas!
Pierced through by Satan's fiery lance,
The serpents coiled in flowing bowls,
Are wound around unnumbered souls.

Deluded men—ye giddy ones,
You now have power to rend your chains,
There is a fount, which freely runs
To whiten all your scarlet stains;
O come and cry—"your largess give
I'll drink of you, and ever live."

Middlebury, Feb. 10th 1870.

A NEW AMERICAN OCEAN CABLE.

Capt. S. B. Thompson and Mr. S. F. Van Choate, Engineer, the authorized agents of the American Cable Company, have just arrived in Paris from Lisbon, having secured from the Portuguese Government the privilege of landing and operating an ocean cable on the Azore Islands. The company is purely American. Its cables are to proceed direct from New York, without intervening land lines, to the Azores; thence in a direct line through the English Channel to a point near Brighton, England, and thence with two lateral branches, one landing at a point near Havre, France, nearly opposite Brighton, and the other at a point on the coast of Holland, near the Hague. It will be observed by this plan that the object is to tap the great business centers, such as London, Paris, and the principal cities of Europe, whose terminal lines concentrate at the Hague, at points as near as may be in their immediate vicinity, instead as the case of existing cables, of having long intermediate land connections. The advantages of this plan are obvious. First, messages can thus be transmitted with more certainty and dispatch; Second, the company will not be compelled to pay so large a portion of its tariff to such land lines, and, therefore, can with profit reduce its rates to a point lower than can possibly be done by existing cable companies. The American Cable Company has also obtained the exclusive right to late and important inventions for insulating and operating cables, by means of which it will be enabled to transmit over a single wire as many messages in a given time as can be done on two wires by the galvanometer system, as now employed. It is working under the act of Congress as well as under the laws of the State of New York, and on the reciprocity principle. Part of its stock has been subscribed for and fully paid up; the balance will be disposed of as required during the construction of the cable, which will probably be laid during the present year. No publicity has been hitherto given, for obvious reasons, to the plans and purposes of this company through the public Journals.

A Puzzle.

Here is a question for young arithmeticians, and others who like to crack an arithmetical nut now and then, to try their wits upon: Two Arabs sat down to dinner, and were accosted by a stranger, who requested leave to join their party, saying, "that he could not get provisions to buy in that part of the country; if they would admit him to eat only an equal share with themselves he would willingly pay for the whole." The frugal meal consisted of eight small loaves of bread, five of which belonged to one of the Arabs and three to the other. The stranger having eaten a third part of the eight loaves, arose and laid before them eight pieces of money, saying: "My friends, that is what I promised you; divide it among you according to your rights." A little dispute arose respecting a division of the money, but, reference being made to the Cadi, he adjusted seven pieces to the owner of the five loaves, and only one piece to him who had owned the three loaves; yet the Cadi decided justly.

A correspondent of the *N. E. Farmer* writes: "For the last five or six years I have been very successful in destroying lice in my hen-coops, by giving the coop or house a thorough whitewashing in the spring, first adding about a gill of kerosene oil to a gallon of whitewash, and about once a month sprinkle the oil about on the roosts, in the laying-boxes, etc. Since I commenced the operation I have seen no vermin."

Fresh salmon from California are forcing the season here (Boston), and tempting the epicures. Peas are in blossom in South Carolina, and they'll soon be along. Great country, ain't it?

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attaches to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Comb, or Gum:

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H.&L.,

Is on the red cover of the packages

Railroad Lands.

CENTRAL PACIFIC RAILROAD,
LAND DEPARTMENT.

Sacramento, March 1st, 1867.

The following statement is made for the information of those who desire to purchase Lands from said Company:

1st. Congress has granted to the Company, all the alternate sections of the public lands designated by odd numbers, within a distance of 20 miles on each side of the railroad;—excepting lands to which a pre-emption or homestead claim had attached prior to the 12th of September, 1862, and excepting lands reserved by the United States as mineral.

2d. The Company has no interest in even sections. To constitute a valid pre-emption or homestead claim within the above exception, the party must have resided on the land prior to September 12th, 1862, and continuously since that time. He must also on that day have been over twenty-one years of age and be the head of a family and have filed his claim in the United States Land Office within the time required by law. If he has not these requisites, or has neglected to file, he will have to buy of the Railroad Company.

3d. All persons who desire to purchase lands from the Railroad Company, including settlers, pre emptors, and other claimants, should make application to the Land Agent, B. B. Redding, at the Land Office of the Company, in Sacramento, either personally or by letter, describing the land by legal subdivisions. This application will be filed and the party will be allowed three months to complete the purchase, and during this time the land will not be sold to another without giving such applicant thirty days previous notice. If the purchase is not completed within three months, the land will be open to purchase by others.

4th. Persons who have valid pre-emption or homestead claims to any tract on an odd numbered section, can purchase the same from the Railroad Company at the Government price of $1.25 per acre in greenbacks, and upon the usual credit of five years if they so desire, by filing an abandonment of their claim in the U. S. Land Office, blanks for which will be furnished by the Land Agent of the Company. Such purchase from the Company has these advantages over a purchase from the Government: The party can leave the land if necessary—he can sell or mortgage it—he is saved the payment of lawyers' fees and expenses of witnesses to go to the Land Office to "prove up" his claim—he can get his title perfected in less time—and he can buy on credit at a low rate of interest.

5th. Actual occupants of lands belonging to the Company, will generally have a preference in the purchase at the regular price. No addition to the price is made where there are improvements on the land made by the settler. Where there are conflicting claimants who apply to purchase, an adjudication of their respective claims will be made by the Land Agent, upon due notice given to both parties.

6th. No lands are sold by the Company or the Government, until after they have been surveyed and the plats returned to the Land Office.

7th. The Company sells ordinary agricultural lands at $2 50 per acre, in gold (except sales to pre-emptors as above). Timber lands, lands in the immediate vicinity of the railroad, and tracts having special value above ordinary farming lands, will be sold at prices and on terms fixed by the Board of Directors.

8th. Persons desiring to do so can buy on a credit of five years by paying twenty per cent. of the price down, and interest annually in advance on the remainder at ten per cent. per annum. Thus a purchaser of one hundred and sixty acres at $2 50, which amounts to four hundred dollars, will pay twenty per cent., or eighty dollars, with interest on three hundred and twenty dollars, which is thirty-two dollars—in all one hundred and twelve dollars, paying each year thereafter thirty-two dollars interest, and the three hundred and twenty dollars at the end of five years. his three hundred and twenty dollars can be paid at any time within the five years, but not by installments, and the purchaser will then be immediately entitled to a deed

9th. Applications to purchase lands can be filed in the Land Office of the Company at any time after the same have been surveyed by the Government; but no applications will be acted upon until three months after the maps have been filed in the United States Land Office. Occupants of the railroad lands who desire to purchase should therefore be prompt in filing their applications in the office of the Company within this time. Blank applications will be furnished to all who desire to purchase. No sales will be made except by legal subdivisions according to Government surveys. Purchasers can buy as large an amount of land as they may wish.

10th. No sales are made by the Company until the land is listed over to it by United States Land Officers. Purchasers are thus assured that the title they obtain is perfect.

B. B. REDDING,
Land Agent C. P. R. R. Co., Sacramento.

THE LAWS OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.

2. If subscribers wish their papers discontinued, publishers may continue to send them until all charges are paid.

3. If subscribers *neglect* or *refuse* to take their papers from the office or place to which they are sent, they are *held responsible* until they *settle* their bills and give notice to discontinue them.

4. If subscribers move to other places without informing the publisher, and the paper is sent to the former direction, they are held responsible.—Notice should always be given of removal.

5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is *prima facie* evidence of intentional fraud.

Postmasters would oblige by a strict fulfillment of the regulations requiring them to notify publishers, once in three months, of papers not taken from their office by subscribers.

Under the law of Congress, papers are not charged postage in the county in which they are published.

Corrected Weekly, by Edwin Farmer.

GRAIN AND FLOUR MARKET.

San Francisco, March, 31

As we said in our late issues, while noting the trifling advance of wheat in Liverpool, that it would not be permanent. So it proved, for it fell again, and is now quoted at 9s. 2d, the price is so low there is no safety for a speculator to run a risk. Those who have kept a large stock on hand will venture to send, and run the risk rather than sell at a loss in this market the best wheat that cost them now, 175, 185, at the present rates and this is the wheat that is going abroad

The last accounts from Europe brings information that the shipments from the United States the first year have been in excess of all former years and more than double that of 1868, and the large stock now on hand and still accumulating, will keep down prices even should the crops come short of their usual average.

The amount of Wheat that came in last week was less than the previous week, but there is still a large quantity back. We hope the Weevils wont catch it, if they do their hold on system is worse than the *Union's* plan, they eat out the heart of it—better change the wheat to Greenbacks in New York, for they will soon be at par.

There is a brisk Market for Flour to China and a large quantity will go forward by Steamer on Saturday. No demand from Liverpool, New York, or abroad, and the now certain assurance of a large and good crop the present year, should induce all who have Grain to spare, to sell!—yes sell!!

The demand for Barley or feed stuff, is very moderate—prices low.

The new Wool clip begins to come in, the fleece good, (see our notice elsewhere) and the prices better. Wool is in demand East and will go forward quickly.

Produce generally of other kinds find a ready market.

Potatoes and Onions pay well now, even with the new crop and even a large vegetable crop to offset them.—Potatoes hold up well (see rates below.)

The Dairy, Meat, Poultry and Fish Markets all found below.

If our cultivators generally will apply more study to their several departments and cultivate deeply, and wisely a varied crop there is no better market in the world nor one that will pay better for a wise and careful attention, than here in California.

FISH.

(H S Burr.)

The Fish Market of San Francisco cannot be surpassed the world over—probably we should repeat that our whole entire Market surpasses all others, but our Fish Market is a grand one. All that the fish petted palate desires can be found here, and if anybody should doubt this statement, and say they had a "nut to crack," with us, because we boast of our Fish Market, we would send them to the *Burr* of the California Market for Fish and the nut would be found with all the milk, in the display he makes every week.

DAIRY—BUTTER, CHEESE, EGGS ETC.

(M. B. French & Co.)

Our Dairy Market now shows the effect of a Railroad competition, not only do large supplies of Butter Cheese and Eggs, come from the Eastern States, but from all the lines of our Rail Roads over the whole State—this enlarges competition.

Our Dairymen really did not calculate very wisely; it is this supply that will hereafter keep down prices, for with Eastern competion our prices can never again attain old rates, "49" prices are gone by.

The supply of Butter is large. Eggs are not so plenty. Cheese comes in abundantly, and prices fall.

Shade Trees! Shade Trees!!

ORNAMENTAL & SHADE TREES

LARGE COLLECTION OF TREES.

EXTRA SIZE SHADE TREES.

Elm and Ash Trees.

A splendid lot of very choice and large size ELM and ASH Trees, for PUBLIC SQARES, and STREETS, will be offered in Lots to suit Purchasers.

Mulberry Trees.

Large size Mulberry Trees, White, Red, and MORUS MULTICAULIS, of all sizes, suitable for planting out as Shade or Ornamental Trees, and also as Fruit Bearing, or for feeding the Silk Worm.

The Mulberry Tree makes a handsome Shade Tree, and is an Ornamental and Fruit Tree combined.

These Trees will be sold in lots to suit purchasers.

OSAGE ORANGE TREES.

A few lots of Osage Orange Trees for setting out as Ornamental Trees. Also

SILK WORM EGGS

Of the FRENCH ANNUAL SPECIES, for sale.

The above will be sold on the best of terms.

P. S.—Orders addressed to A. P. Smith, will be promptly attended to.

Sample Trees can be seen at the FARMER OFFICE, where Information of the quality of the Trees and the price can be had.

A. P. SMITH.

Of the well known SMITH'S GARDENS,

Sacramento City, Cal.

COMMISSION SALES-ROOM —AND— Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can, and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc Orders should include satisfactory references or the Cash, or bills could be sent by Express, to be collected on delivery

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns, and which we have the exclusive sale for this Coast.

We also call attention to the

NEW GATE.

A most valuable invention, particularly to Farmers and Stock Hallers. County Rights for sale.

☞ Every kind of Implement will be guaranteed to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

The following are the kind of Goods imported or consigned to us for sale and which can be offered on the most favorable terms:

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown.

FINEST MIXED LAWN GRASSES,
FINEST MIXED GRASSES FOR
PERMANENT PASTURES.

FINEST MIXED GRASSES FOR SHEEP-WALKS
FINEST MIXED GRASSES
FOR MEADOW-LAND.

PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALPALPA OR CHILI CLOVER,
KENTUCKY BLUE GRASS.
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental

TREE SEEDS.

TOBACCO SEED,
COTTON SEED,
COFFEE SEED,
TEA SEED.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

These will be ready in the months of November and December.

Collections can be forwarded by post at the following rates:

50 Packets choicest and best			$10 00
25	do	do	5 00
12	do	do	3 00
50 Packets Good Selected			6 00
25	do	do	3 00
12	do	do	1 50

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference

Silk Culture:

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

FLOWERING BULBS.

Lilies, Tulips, Hyacinths, Amaryllis, Anemones
Ranunculus, Narcissus, Tuberoses, Peony.
Roots, Crocus, Snow-Drops,
Very Choice Gladioli,

Choice collections of Flowering Bulbs, comprising all the most showy and leading varieties from $5 00 and upwards.

EVERGREEN AND DECIDUOUS SHRUBS,

ORNAMENTAL TREES.

FRUIT TREES.

The newest and most approved sorts:

Peaches, Figs,
Plums, Almonds,
Cherries, Walnuts,
Apricots, Nectarines,
Pears, Grapes,
Apples, Etc. Etc.

Also the best varieties of Strawberries, Raspberries, Gooseberries, Currants, and Blackberries.

PERPETUAL FLOWERING ROSES

Of the best kinds.

GREENHOUSE AND BEDDING PLANTS.

Any one desirous of having their Gardens look gay through out the season, can be furnished with the plants at a reasonable rate, by applying at this office.

Every information given as to the cultivation of Plants and raising of Seeds, etc. Also respecting the mode and best systems of Pruning all varieties of Trees, etc.

Gardens and Grounds designed and put in order, and every article furnished for same.

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference.

Farmers' Headquarters. WARREN & CO., 320 Clay Street, up-stairs.

SPLENDID PREMIUMS!! 1870!

OUR SEVENTEENTH YEAR

AND

THIRTY THIRD VOLUME

OF THE

"California Farmer"

With the New Volume in January we begin the SEVENTEENTH YEAR of Labor with this Journal.

THE CALIFORNIA FARMER PREMIUMS.

The CALIFORNIA FARMER will club with the following Magazines and Journals, and furnish them for the year 1870 at the following rates.

The New York Independent,

PREMIUM ENGRAVINGS,

The California Farmer and the Independent, for $7 50, and to present them with Richie's splendid steel engravings of GRANT and COLFAX, the price of which is $2 each, thus giving them the two Splendid and Popular Pictures worth $4, and both these Papers for $7 50

The CALIFORNIA FARMER and the New York Christian Union, new series, Edited by Rev. HENRY WARD BEECHER, $ 50

The CALIFORNIA FARMER and the Harper's Monthly, Weekly and Bazar, $4 50

VINEYARDS IN GREECE

From the French of Mr. A. GAUDRY, in the "Journal de Viticultore Pratique."

(CONCLUDED FROM NO. 10.)

Thanks to the liberal patronage of Baron Forth Rouen, the French Minister, I have received some official communications from the Minister of the Interior of Greece. According to these notes, the Kingdom possessed in 1859, 120,000 stremmas of Vineyards,—480 hectares.

These 120,000 stremmas are divided as follows: Achaia and Elis 6,700—Argolis and Corinthe 20,600—Arcania and Etolia 6,000—Arcadia 600—Messenia 23,000—Laconia 500—less important localities 4,900. On 90,000 stremmas in all, fruit-bearing vines were under cultivation, the rest has been planted with vines but recently. It takes from three to four years before the vines commence to bear.

In the vineyards of the Passolina the following method is in use:

The soil is divided into squares, encircled by drains. The vines are planted in regular rows.—At the beginning of December the ground around the vine is hoed, to destroy the weed, which is very abundant after the frequent rains of the fall. The destroyed weed is still left around the foot of the vine, and is never removed, as in its rotten state it affords a manure, which is considered to be necessary.

After this operation, earth is heaped around the vine to cover it partly and to keep it in constant humidity. In the spring this cover is taken off and placed in the space left between the rows.—Around the foot of the vine the soil is heaped in a circle to retain all humidity for the plant.

At the appearance of the first buds of the leaves, the drains are opened; the water in the course of about two hours, spreads all over the square, and then through small canals, it is let into the adjoining square. During the flowering period the vines are never inundated. Experience has taught that such treatment at that time prohibits the formation of the fruit. But as soon as the grapes commence to grow, the drains are opened again, and the irrigation is thus repeated about once a month, until the vintage begins.

I have spoken above of the modification in the development of the Passoline grape, by a scarifi cating operation on the vine. It is about since [illegible] that the vine-growers have commenced to scarify their vines by cutting off from the trunk a small circular portion of the bark or even of the wood, for the purpose of augmenting its product fruitfulness; and indeed, as I have stated before, the grapes of a scarified vine gain in volume; but they also lose in saccharine matter, in weight, and their watery parts increase. As the Passoline is sold by the weight, the procedure offers no real profit. Besides this, the berries lose in quality, and the lower part of the vine becomes weak and crippled.

When the method of scarification came into general use, and threatened to bring deterioration to the vines of Corinths, the Government resolved to stop this kind of treatment. Not having power to plainly forbid the proprietor to cut and to destroy his vines, if he liked to do so, a heavy tax was imposed on all Passoline grapes coming from scarified vines. This tax was enforced till 1850. About that time a general disease of grapes broke out, which placed the vine-growers in a very precarious position. But when, on the other side, it had been ascertained that scarification did not exercise any unfavorable effect on the disease, the enforcing of the tax was given up.

The grape of Corinths is the earliest of all varieties, the vintage usually taking place about the 15th of July. By this time the vines are covered with fruit so densely that you can hardly see any leaves. A single vine bears from 500 to 600 grapes. The vines most richly laden with grapes are usually on the footpaths, where there is a more rapid circulation of air, and a greater abundance of the running water.

The vintage of the most interesting character is that on the shores of the Corinthian Gulf. As the vineyards of the Passoline are all in the lower plains, all the vignerons leave their houses in the higher regions, and the villages in the mountains become entirely deserted. Men, women, children—all want to live in the plains for the purpose of attending properly to the vintage; and everywhere you see them constructing cabins from foliage.

The operation of gathering the grapes proceeds in the following manner: On the left arm hangs a basket, while the right hand holds a very small knife or bill, curved backward and very sharp.—The grapes, as they are cut, drop down in the basket, which is held right under the vinebranch. The operation proceeds with an immense agility; the innumerable grapes, which form a dark-blue drapery to the vine, fall, under the little knife of the vigneron, down into the basket with a remarkable rapidity. In the evening, when the day's work is done, the whole company assemble before their leafy huts; bonfires are lighted, which illuminate the whole southern coast of the Corinthian Gulf, from Lutraki to Elis; they also reflect their splendors in the dark waters of the Gulf, and throw their light as far as the foot of the Peloponnesian Mountains. Dancing commences,—the orchestra consisting exclusively of singers; the time is beaten by clapping hands. But soon the dry, burning vinebranches desist from crackling; they form a glowing mass, and whole lambs, sheep and calves are fetched to that grandiose range to be roasted, while the fire is kept up by vinebranches. The smoke of the latter, it is said, gives an excellent savor to the meat. These festivals recall to mind the scenes described by Homer; and the Peloponnese, during the Passoline vintage, recovers her ancient poetry.

This gay vintage-feasting lasts about two weeks. The plucked grapes are deposited on the ground, which has been previously leveled, planed, and covered with the manure of cows, which must be perfectly dry. The latter preserves the juice clear, and facilitates the dessication of the fruit.
